1 **LAS VEGAS, CLARK COUNTY, NEVADA, FEBRUARY 16, 2022, 8:30 A.M.**

2 \* \* \* \* \*

3 THE COURT: All right. So starting with the  
4 Las Vegas Valley Water District and Southern Nevada Water  
5 Authority.

6 MR. TAGGART: Good morning, Your Honor. Here on  
7 behalf of the District and the authority, Paul Taggart.

8 THE COURT: Thank you.  
9 Nevada State Engineer?

10 MR. BOLOTIN: Good morning, Your Honor. Senior  
11 Deputy Attorney General James Bolotin for the Nevada State  
12 Engineer. And once again Micheline Fairbank from The Division  
13 of Water Resources.

14 THE COURT: Okay. Great. Thank you.  
15 Lincoln Valley Water District.

16 MR. KLOMP: Good morning, Your Honor. Wayne Klomp on  
17 behalf of Lincoln Water District with Wade Poulsen. That's the  
18 general manager with me.

19 THE COURT: Okay. Thank you.  
20 Vidler Water Company.

21 MS. PETERSON: Thank you, Your Honor. Karen Peterson  
22 from Allison MacKenzie law firm. And Ms. Palmer is here. She  
23 is in the hallway right now on a phone call, but Mr. Bushner  
24 and Mr. Hurth are here also.

25 THE COURT: Great. Thank you.

JD Reporting, Inc.

1 Nevada Cogeneration Associates No. 1 and 2.

2 MR. FLAHERTY: Good morning, Your Honor. Frank  
3 Flaherty, Dyer Lawrence, LLP, here on behalf of NCA.

4 THE COURT: Okay. Thank you.

5 Muddy Valley Irrigation Company.

6 MR. DOTSON: Good morning, Your Honor. Rob Dotson.  
7 Doubling on tech support again here today.

8 THE COURT: Thank you.

9 MR. DOTSON: For Muddy Valley Irrigation District  
10 along with Steve King, and we have Scott Middleton and maybe  
11 members of the board online.

12 THE COURT: All right. Thank you.

13 Center for Biological Diversity.

14 MR. LAKE: Good morning, Your Honor. Scott Lake for  
15 the Center for Biological Diversity. I also have Patrick  
16 Donnelly and Lisa Belenky on BlueJeans.

17 THE COURT: Okay. Thank you.

18 Republic Environmental Technologies.

19 MR. FOLETTA: Good morning, Your Honor. Lucas  
20 Foletta for Republic Environmental Technologies and  
21 Georgia-Pacific.

22 THE COURT: Thank you.

23 Let's see. Dry Lake Water and Apex?

24 MR. BALDUCCI: Good morning, Your Honor. Christian  
25 Balducci appearing on behalf of Apex and Dry Lake. Also

1 appearing on BlueJeans is a client representative and  
2 consultant is Lisa Cole.

3 THE COURT: Thank you.

4 Let's see. Did we ever get anyone from Western Elite  
5 and Bedroc?

6 UNIDENTIFIED SPEAKER: No.

7 THE COURT: No. All right.

8 Let's see. Moapa Valley Water District.

9 MR. MORRISON: Good morning, Your Honor. Greg  
10 Morrison on behalf of Moapa Valley Water District.

11 THE COURT: Okay. Thank you.

12 Coyote Springs.

13 MR. ROBISON: Good morning again, Your Honor. Kent  
14 Robison, Emilia Cargill, Brad Herrema and Hannah Winston, and  
15 our technician Mark Ivie (phonetic) for CSI.

16 THE COURT: Okay. Thank you.

17 Let's see. Sierra Pacific Power Company --

18 MR. HERREMA: Brad Herrema for CSI on the BlueJeans  
19 as well.

20 THE COURT: Great. Thank you.

21 Sierra Pacific Power Company and Nevada Power  
22 Company?

23 MS. CAVIGLIA: Good morning, Your Honor. Justina  
24 Caviglia on behalf of Sierra Pacific Power Company and Nevada  
25 Power Company.

1 THE COURT: Thank you.

2 Church of Jesus Christ of Latter-day Saints?

3 MR. CARLSON: Good morning, Your Honor. Sev Carlson  
4 on behalf of the Church.

5 THE COURT: Okay. Thank you.

6 Have I missed anyone?

7 (No audible response.)

8 THE COURT: All right. So I think we were in the  
9 middle of Mr. Taggart's answering.

10 (Pause in the proceedings.)

11 THE COURT: Ready.

12 MR. TAGGART: Good morning, Your Honor.

13 THE COURT: Good morning.

14 MR. TAGGART: I just want to say I appreciate the  
15 timekeeping. I think that's worked really well. We've had to  
16 handle it different ways at different times. This has worked  
17 out really well.

18 THE COURT: Okay. Well, I'm glad. You can get it  
19 right on Amazon if you need to.

20 MR. TAGGART: Yeah.

21 **ARGUMENT FOR SNWA AND LVVWD**

22 MR. TAGGART: So yesterday I concluded the day for us  
23 by starting my argument on behalf of the District and the  
24 authority. That is our respondent intervenor's argument, which  
25 is in favor of the State Engineer's decision. So these are the

JD Reporting, Inc.

1 arguments that we're presenting on the points that the decision  
2 that we agree with, which is mostly all of the decision. And  
3 anything related to the conflicts determination I will talk  
4 about in a reply, and also I'll reserve some time for that, but  
5 not a lot.

6 So just so people, you know, who want to -- I'm going  
7 to go probably an hour and a half, right, this morning.

8 THE COURT: Okay.

9 MR. TAGGART: Okay.

10 THE COURT: It's your time. Do with it what you  
11 will.

12 MR. TAGGART: All right. And I just want Kent to  
13 know so that he doesn't get anxious after five minutes and  
14 wonder why I'm still talking.

15 So, yeah, I covered some points yesterday. And so  
16 today I'm going to get back into that. We have a presentation.  
17 And as you know, there's two main points that we're getting  
18 into here, and that is the authority to delineate the Lower  
19 White River Flow System and then the finding that the area  
20 within that Lower White River Flow System is hydrologically  
21 connected and has a single source.

22 The first is a legal. The second is a factual  
23 question. Different standards of review with respect to those  
24 two I'm not going to go into detail there on what those are  
25 because I think we've talked about that enough. So the first

1 one I'm going to talk about is the delineation again.

2           So the first thing I just wanted to bring up, and if  
3 you just bear with me, I'm trying to respond to a lot of  
4 different arguments, and I've tried to coordinate as much as I  
5 could.

6           So one of the first I think questions that you asked  
7 CSI had to do with, you know, how should the State Engineer  
8 have done it and so fourth, and out of that came some  
9 discussion about where does it end? Where does the basin  
10 boundaries and if you're going to find these are connected, and  
11 I think it was even said that these criteria the State Engineer  
12 used, if you applied them, the whole state would be one basin.  
13 I think you asked questions about where does it end. Does this  
14 mean all water rights in Nevada don't have finality because the  
15 State Engineer could apply this rule across the State. I  
16 think --

17           THE COURT: Well, you know, that he could redraw or  
18 redelineate the lines of the basins.

19           MR. TAGGART: Right. Right. And I think that that  
20 was amplified a little bit by Vidler's arguments about the  
21 extent of the carbonate aquifer. They put up a slide that  
22 showed, you know, a large area that's called a carbonate  
23 aquifer; I think intending to imply that that could be -- it  
24 could be that large. I think that Mr. Klomp put up the Max  
25 Eakin 1966 report I keep talking about, that statement out of

1 that report.

2 I've got here on the Slide 10. I cited to this  
3 earlier in argument, but he showed you a map of the White River  
4 Flow System. We're in the Lower White River Flow System here.

5 So I think it's a fair question of, well, where does  
6 it end? And I think the science controls what's connected, and  
7 not everything is connected scientifically. And if you look at  
8 the water levels and you look at the effect of water levels  
9 from testing, from pump testing, if you look at the effect on  
10 water levels from time after that, if you look at the effect of  
11 climate on water levels and you see similarities or you see  
12 differences, that tells you what's connected and what's not  
13 connected.

14 So --

15 THE COURT: So I guess my question is, you know,  
16 science -- I guess I should say the technical aspects of  
17 science can change, meaning, you know, being able to figure out  
18 what water is connected. I assume, you know, in the future  
19 that will get more accurate or that kind of thing, that there  
20 will be different ways to measure or that kind of thing. So I  
21 guess my question is if the science is dictating where these  
22 boundaries should be, where is the finality for those water  
23 right holders who, at the time that they get their water rights  
24 are getting those water rights with the understanding that they  
25 are within this delineated basin and not knowing that they

1 could then get lumped in based on the science as it evolves and  
2 changes as a later date?

3 MR. TAGGART: Well, I'm going to talk a little later  
4 about what you do when the science changes and how the State  
5 Engineer can act, and there's a process that he has to follow.  
6 And I think that it's important to look at the specific  
7 situation we're involved in here as opposed to the general kind  
8 of abstract notion of if someone were to get something and not  
9 be at notice, to these people in this case --

10 THE COURT: Sure.

11 MR. TAGGART: -- know that this might happen in the  
12 future. I think that's --

13 THE COURT: True, but, I mean, I think everyone said  
14 this is a matter of first impression at this point, whether or  
15 not there is conjunctive management or joint management powers  
16 that the Nevada State Engineer has; right?

17 MR. TAGGART: But it's not.

18 THE COURT: Okay.

19 MR. TAGGART: And I'm glad I got to sleep on it.

20 THE COURT: Okay.

21 MR. TAGGART: Because when I thought about this, and  
22 I mentioned this this morning to some people is that the last  
23 20 years of my career, basically every case has been either  
24 conjunctive management or it's been joint management.

25 We didn't call it that, but we were forced to look at

1 multiple groundwater basins and the flow between those basins,  
2 and in many, many cases, and I'm going to talk about those.

3 THE COURT: Okay.

4 MR. TAGGART: And we also have had case after case  
5 after case of groundwater impacting surface water. And I've  
6 had cases that have gone on for the last 15 years, and there's  
7 Supreme Court decisions about them that involve groundwater and  
8 surface water conjunctive management.

9 THE COURT: Okay.

10 MR. TAGGART: And then we have other cases where  
11 we've been required to look at the impact of developing water  
12 in one basin on a series of basins in the Lower White River  
13 Flow System.

14 So you might be aware of the -- the groundwater  
15 project that SNWA tried to develop from Eastern Nevada down  
16 here to Las Vegas. And in that case, we went up to District  
17 Court, and Judge Estes remanded it --

18 THE COURT: I see -- I see --

19 MR. TAGGART: -- it went to the Supreme Court in a  
20 published decision.

21 THE COURT: I see Mr. Robison.

22 MR. ROBISON: Your Honor, we have to object. This is  
23 not in the record. Mr. Taggart's history with other cases is  
24 not in the record. And to be arguing his involvement in  
25 another case and what was done in those other cases, which is

1 not covered by the briefs, is improper.

2 THE COURT: I appreciate you're trying to help me  
3 with that issue, and I see Ms. Peterson is also making an  
4 objection for the record for the same --

5 MS. PETERSON: Yes. Thank you.

6 THE COURT: -- for the same purpose, and I will  
7 sustain that objection.

8 So I realize that you're trying to help me, but I do  
9 think that I need to probably stick to the record and what's  
10 been in the briefs.

11 MR. TAGGART: Well, I appreciate that, and let's keep  
12 a clean record.

13 THE COURT: Sure.

14 MR. TAGGART: But the Court shouldn't be misled.  
15 This is not an issue of first impression. 1976, the *Cappaert*  
16 case came out from the United States Supreme Court and told the  
17 State Engineer if groundwater pumping affects the surface water  
18 right, Justice Burger said you cannot allow that. And that was  
19 in 1976. And so to say today that we've never dealt with  
20 conjunctive management in Nevada is just wrong. The  
21 legislature's policy declaration recognized that point.

22 I think of those policy declarations as essentially a  
23 reboot of the water law. We have to assume that when the  
24 legislature made those policy declarations it was aware of the  
25 entire set of laws in the water code, and it was saying that,

1 you know what, in 1955, in 1939, we created a statute, and it  
2 may not have been clear about conjunctive management at that  
3 time. It may not have been clear about best available science,  
4 but we're today saying that when those statutes are  
5 interpreted, when those statutes are executed, they need to be  
6 done with those things in mind.

7 So and even -- so if the State Engineer doesn't want  
8 to, you know, manage conjunctively, then *Cappaert* tells us the  
9 United States Supreme Court will knock him down. The Supreme  
10 Court -- our State Supreme Court in a number of cases that  
11 we've cited in our briefs have done the same thing, and so it's  
12 just not accurate to say that this hasn't been done in Nevada.  
13 It has been, and it's what we're all dealing with.

14 We cited in our briefs to the *Tikaboo* and *Three Lakes*  
15 rulings. Those are four valleys kind of north of Nellis down  
16 here, and that's what we started with in with the groundwater  
17 project in 2003, 2004, 2005. There were four separate  
18 groundwater basins. In order for us to develop water in one  
19 groundwater basin, we had to look at the water budgets for all  
20 four basins, and we went to the State Engineer twice on those  
21 cases, and we've cited to those rulings in our brief.

22 MR. ROBISON: Your Honor, this is not on the record.  
23 He's arguing other cases.

24 MR. TAGGART: I cited those rulings in our brief.

25 MR. ROBISON: But not what he argued in those cases,

1 Your Honor. This is way beyond the record.

2 THE COURT: I will make sure that I am very familiar,  
3 before I issue any order, with all of the cases that have been  
4 cited in the briefs. So...

5 MR. TAGGART: Okay. So when --

6 (Pause in the proceedings.)

7 MR. TAGGART: Like I said, we can go the traditional  
8 route.

9 THE COURT: Okay.

10 MR. TAGGART: So what I want --

11 THE COURT: Oh, is it not working?

12 MR. TAGGART: What I want to bring up, and if we can  
13 get it up, we'll talk about it, is that this is not a slippery  
14 slope. If, you know, we base our decisions on science and  
15 fact, we don't create an entire flow system across the State of  
16 Nevada. And the point I want to make and the point that the  
17 slide has on it, it's a page from our expert report, and it  
18 talks about a thing called the Pahrnagate shear zone. And the  
19 Pahrnagate shear zone is -- and the State Engineer knew about  
20 this when he made his ruling because he had -- all this  
21 information was in the record.

22 And it is an area to the north of Coyote Spring  
23 Valley, again where Pahrnagat Valley is to the north of that.  
24 And at that location, there's a water level measurement north  
25 of that, and there's a water level measurement south of that.

1 There's 1500 feet. I mean, that ruler that Ms. Peterson had  
2 with the 6 inches, there's 1500 feet of water level difference  
3 between those two wells in those two locations. That's  
4 something significant in the ground. That's what the witnesses  
5 testified about, that that is a -- it's an underground dam  
6 basically.

7 And most of the water that comes to the Lower White  
8 River Flow System, according to the experts, comes through  
9 that. But because there's so much water behind it, and there's  
10 so much potential it's called, it's forcing some water through.  
11 Well, that kind of barrier creates a barrier. So the Lower  
12 White River Flow System is separated from the Upper White River  
13 Flow System because of a barrier like that.

14 And so these things exist and have been measured and  
15 tested and determined to exist. So we're not going to end up,  
16 you know, with the slippery slope of running these basins  
17 throughout the State. We're looking at the specific evidence  
18 the State Engineer used to find that it exists here, and that's  
19 where it exists and not forever.

20 (Pause in the proceedings.)

21 THE COURT: So do you want to take -- you want me to  
22 stop the clock for a minute while you get that up and running?

23 MR. DOTSON: We got it back.

24 THE COURT: Oh, you got it?

25 MR. DOTSON: Yeah. I just need to know what page.

1 We've got to find the page.

2 (Pause in the proceedings.)

3 MR. TAGGART: Yeah, so we're on page 60. That's ROA  
4 48396, and this was our report, and this is where we're talking  
5 about a 1550-foot difference.

6 There was some discussion of a 75-foot difference or  
7 a 50-foot difference between parts of Kane and parts of Coyote  
8 Spring Valley. And this is a much, you know, (indiscernible)  
9 magnitude larger difference that really does establish what a  
10 barrier is. And that's the kind of evidence the State Engineer  
11 relied upon.

12 So now I'd like to talk again about the basin.

13 And, Rob, if you could go to Slide 22, please.

14 (Pause in the proceedings.)

15 MR. TAGGART: So again we talked about this a little  
16 bit yesterday too, and --

17 Can you go to the next slide, please.

18 So this compares the two statutes on the Slide 23.  
19 This compares the two statutes we were talking about yesterday.  
20 So 534.030 is the designation statute. That's not at issue  
21 here. The State Engineer is not claiming that he designated  
22 any basins. He's claiming that he has rules in six designated  
23 basins, and then in Kane he has a rule in a nondesignated  
24 basin. That's what Order 1309 is.

25 THE COURT: So I just want to make sure. He had

1 previously designated those basins in 1303; right?

2 MR. TAGGART: Well, no. In all -- they were  
3 individual orders in each one of those six basins like back in  
4 the -- I'm not sure, I think the '80s.

5 THE COURT: Okay.

6 MR. TAGGART: But it's listed in that order in 1309.  
7 They go through that in the beginning. That's like the first  
8 page, but they -- so they initially designated all those basins  
9 except for Kane. And so 534.120, that is the statute that says  
10 in a designated basin you can do more. That is essential for  
11 the welfare is the key language we focus on there.

12 532.120 is the more broad police power of the State  
13 Engineer that authorizes him to do what he did with Kane  
14 Valley, Kane Spring Valley even though it's not officially  
15 designated.

16 But in those designated basins, which is really the  
17 meat of this area, I mean, really it's the main part of the  
18 Lower White River Flow System. It's the part that was part in  
19 1303 and then is again in 1309. In those basins, this language  
20 about area and about basin appears -- I'd like to just kind of  
21 compare .030 to 534.120, and 030 has this language, Any  
22 particular basin or a portion thereof. And the arguments have  
23 been made that that's the language that says he can't manage  
24 beyond basins. I mean, quite frankly I think the notion that  
25 we're going to parse out words so specifically when we really

1 know the purpose of what the legislature wanted the State  
2 Engineer to do was to effectively manage groundwater, and that  
3 should be how we interpret everything in the statutes.

4 But that seems to -- any particular basin or a  
5 portion thereof, that seems to indicate a basin or smaller  
6 area. But in 534.120, it says within an area that's been  
7 designated or for the essential -- for the welfare of the area  
8 involved. That seems to be broader. So I think it's a fair  
9 reading that one ratchets up. One ratchets down in terms of  
10 size from a basin.

11 So -- so that's -- that's it for that. I think that  
12 we cited in our brief about there is a legislative rule that  
13 the legislature has adopted that tells us how to interpret  
14 statutes. It says that when they use a singular that it can be  
15 interpreted to be plural. When they use plural, it can be  
16 interpreted to be singular. That's NRS 0.030. And also we  
17 know that we cannot interpret statutes in a fashion that will  
18 lead to absurd results.

19 So if the State Engineer is required to abide by bad  
20 science or old science, that's an absurd result. And so that  
21 shouldn't be the way we interpret these statutes.

22 We've also cited to the Water Words Dictionary, which  
23 is a document in the State Engineer's files. And I clipped out  
24 a piece of it that I think is the most applicable, and it says  
25 that a basin is a discrete hydrologic unit for water planning

1 and management purposes. It's a broad -- I think it's a broad  
2 statement. It could be --

3           You asked about the 14 areas. What does that mean?  
4 I think that the -- it -- it's whatever is meant -- it shares a  
5 common source, and has a -- it has an area that can be managed  
6 together as one, as this says, discrete hydrologic unit for  
7 water planning and management purposes. So I think that's the  
8 clearest definition we get that applies in this case, and we  
9 get that from the Water Words Dictionary.

10           I talked a little bit about joint management before.  
11 And without getting into items that I'll get an objection for,  
12 I want to refer to Water for Nevada Number 3. It's a 1971  
13 report.

14           And this is the last page that crashed it the last  
15 time. So can you (indiscernible), please.

16           And what this is, and I think this is really  
17 important, is water for Nevada Number 3 is when the Nevada  
18 State Engineer took all of the reconnaissance reports --

19           THE COURT: Is this a slide that -- this is a map?

20           MR. TAGGART: Yes.

21           THE COURT: Okay.

22           MR. TAGGART: So this is the plate, the big foldout  
23 map at the back of the report. And what the report did is it  
24 brought together all of the prior reports that had been done in  
25 individual areas. So we talked yesterday about the

1 reconnaissance reports that went throughout the State. So they  
2 had little pieces of the jigsaw puzzle. And then they put the  
3 puzzle together in Report Number 3.

4 And what's important to understand is when they did  
5 those individual pieces of the jigsaw puzzle, they would create  
6 a water budget, and a water budget is a, like we said  
7 yesterday, a reconnaissance. It's an estimate of water that  
8 comes in and water that leaves the system. How much water is  
9 in the system. That's ultimately what the State Engineer is  
10 supposed to figure out. Is there water available for  
11 appropriation. That's like one of the key points he has to  
12 decide whenever he's giving out more water. Is there water  
13 available for appropriation? That's what these reports were --  
14 that was the effort.

15 And so they recognize that some water was leaving  
16 basins, and some water was coming into basins. But once they  
17 pieced all these pieces of the jigsaw puzzle together, they had  
18 to reconcile these waters going in and out. And so --

19 I don't know, Rob, can you blow up the area that  
20 we're talking about now.

21 Because what you'll see on this map, and this is in  
22 the record, you'll see these arrows, and I guess my point is  
23 joint management between groundwater basins has been happening  
24 and recognized since this time. And, I mean, I'll fast-forward  
25 to, you know -- well, I won't because, you know, it's in the

1 record. It's what we cited to, and these are the types of  
2 things we had to recognize is that there's flow in and out of  
3 basins.

4 So you remember -- so this is -- what I'm pointing at  
5 is the last slide in our presentation, and it's page number --  
6 I don't know. I'll tell you in a second. Because I don't --

7 (Pause in the proceedings.)

8 MR. TAGGART: But you can see where 210 is. And you  
9 can see where there's an arrow coming in to 210 from Kane  
10 Springs. Do you see that?

11 THE COURT: I do.

12 MR. TAGGART: And you can see arrows all kind of in  
13 the area we're talking about towards the river. Some of those  
14 arrows are about groundwater. Some of them are about surface  
15 water. There's a legend I'll let speak for itself.

16 But the point is throughout this map you see these  
17 arrows. So even at that time they were recognizing that basins  
18 share water at some level. I think it's -- I don't know if  
19 this is easy or hard to -- if water didn't go somewhere, we'd  
20 have lakes everywhere. If the snow melt melted and went into  
21 the groundwater and it couldn't go anywhere, it would fill up  
22 the groundwater basin, and it would become a lake. It has to  
23 be going somewhere. And so these maps were what the State  
24 Engineer developed in 1971 and has been what has been the  
25 guiding principle for how they manage groundwater basins and

1 how they determine how much water is available in a groundwater  
2 basin.

3 So I'll leave it at that.

4 UNIDENTIFIED SPEAKER: (Indiscernible) for the record  
5 the cite.

6 MR. TAGGART: Yeah, the cite is ROA 9295. It's  
7 page 62 of the PowerPoint slide -- I'm sorry, 63.

8 Okay. All right. So the --

9 Could you go to Slide 30, please.

10 So now we're going to talk about the substantial  
11 evidence to support the finding of the hydrologic connection  
12 and a sole source of supply. So it's our -- you know, our  
13 argument is, that those are the two factual findings that  
14 underlie 1309 and that the Court has to focus on. Were those  
15 correct? We know what the standard of review is. We know what  
16 the deference is and all of that, but those are the two  
17 questions: Is there close hydrologic connection? Is it the  
18 same source of supply?

19 So what I wanted to say here is that a couple points  
20 have been made by counsel for other parties here about evidence  
21 and arguments have been made that appear, I think, to be  
22 blurring the line between the standard of review here.

23 So the first one is -- and this is an example of why  
24 factual findings should be deferred to the State Engineer. I  
25 think there's enough that the Court has to take on *de novo*

1 here.

2 THE COURT: No, I'm not turning into any sort of  
3 hydrologist or whatever any time soon.

4 (Pause in the proceedings.)

5 MR. TAGGART: And what I'm going to show, this is  
6 just an example of --

7 So this is page 62, and this Ms. Peterson talked  
8 about, and she said this is -- this is CSVN-4. So this is a  
9 monitor well at the north end of Coyote Spring Valley. The  
10 State Engineer has it on his chart too, and she said the  
11 transducer was bad, and it showed an error. And that was part  
12 of her argument.

13 Well, if you look at this hydrograph, it shows up in  
14 the legend two things: Continuous measurements and periodic  
15 measurements. The State Engineer understands what these things  
16 mean. One of those is an automated system that reads a  
17 transducer. It reads regularly the level of water. One of  
18 them is a human who goes out and puts a tape down into the hole  
19 and sees how deep the water is.

20 So if you have both, it doesn't matter if the  
21 electronic measurement device is a little bit off if you've  
22 got -- if you check it with a periodic measurement from a  
23 person. The State Engineer knows that. So if this gets in  
24 front of him and someone complains about the transducer, he's  
25 going to be able to decipher what that means. You know, I

1 think my point is, let him do that.

2           And here's another example. Okay. So this is a  
3 slide that Vidler had up on the screen yesterday, and their  
4 argument was that when there was a pump test there was no  
5 change in the monitor well. The pump test is the blue. The  
6 monitor well is the red. And I looked at this a little closer,  
7 and the State Engineer got this, and he got to look at this,  
8 and he got to decide, and he found it wasn't persuasive, and he  
9 should -- and then their question is should he be deferred to  
10 on that.

11           But first of all, if you look at the scale on each  
12 side of this, they're not the same. And maybe that's not  
13 significant; maybe it is, but they're not.

14           But what else is interesting is that on the red line  
15 there's no data point from right after the pump test. You can  
16 see that first red line right after the blue line comes back up  
17 again. There's no data point between that and the one at the  
18 far end of the line. So the line can then go straight. If  
19 there was data in between those two -- I mean, I don't know why  
20 there wasn't data in between those two, but that's what we want  
21 to see, to see if there was a response, and there's no data  
22 plotted on that chart.

23           So my point isn't to say that -- my point is just to  
24 say the State Engineer looked at all of this. He had all of  
25 this. Everyone had a chance to cross-examine witnesses.

1 Everyone had a chance to challenge what the experts had said,  
2 and he heard all of that, and he saw them. He saw how they  
3 responded, just like you do in trial. He saw how they  
4 responded, how the witnesses responded under cross-examination,  
5 what their demeanor was, whether they admitted to making  
6 errors.

7           And before I forget, I'll say, you know, some  
8 witnesses change their view of the facts as a result of the  
9 hearing. That's been criticized by some here as a due process  
10 violation. That's not a due process violation. That's the  
11 process of testing the mettle of expert testimony in trial.  
12 That's what that is. And witnesses, good witnesses should be  
13 prepared to change their opinion if they learn new evidence  
14 that is persuasive. And so some -- if witnesses did that,  
15 that's not any form of a due process violation.

16           So with respect to deference, I think that's my point  
17 there is that leave that to the State Engineer because he  
18 understands the types of things that happen when you see  
19 hydrographs like this.

20           Now, there's a -- the evidence that the State  
21 Engineer relied upon in finding the connectiveness and the same  
22 source --

23           Rob, if you could go to slide 34, please --

24           The first -- well, we list all of the different  
25 evidence. I think the first question the Court should ask is

1 okay, you want me to do a substantial evidence review. What  
2 was the evidence that you had. So we listed it here. And he  
3 had evidence going back to hearings on the water rights in  
4 Coyote Spring Valley back in the '90s. He had the 2001  
5 hearings. He had the aquifer test. He had the expert reports  
6 after the aquifer test. And then he had 1309 -- or the 1303  
7 reports.

8           What I wanted to point out now is what I said earlier  
9 is that the question and probably the question not for us today  
10 to decide -- I think there's a process by which this question  
11 will be answered, but who will get water? When there's 8,000  
12 only or less, who will get water? That will be determined  
13 later. And when it is determined, parties will be able to  
14 present arguments that I relied or I didn't rely or I knew or I  
15 didn't know that this might happen. And other parties will be  
16 able to come in and say, wait, you did know or you didn't know  
17 that this might happen. You were on notice. It's not  
18 reasonable reliance to say that you just thought the State  
19 Engineer was going to always have water for you.

20           And when you look at the record, the actual record of  
21 events in this case, you see that many parties knew that all of  
22 this was possible. And again, not for us to decide today, but  
23 I think when folks get up and say that we had a green light to  
24 develop, I think it needs to be made clear there was a lot of  
25 yellow lights, and maybe -- I mean, in Boston people run red

1 lights, but, I mean, I think there were red lights, and for  
2 instance, and we've cited this in our brief. So I won't go  
3 into it into much more detail, but we've cited to what CSI said  
4 to the Clark County Commission when their project was approved  
5 about it was their obligation to make sure that they had water  
6 secured for their project, that they were taking on that  
7 obligation, that development takes care of itself, that they  
8 weren't expecting the public agency to get them their water.  
9 They were going to get that themselves.

10 Then in the ruling, in Ruling 625, and I don't recall  
11 the one for Coyote Spring, but there was that series of rulings  
12 that came out after Order 1169. And in those rulings they said  
13 that all new applications were denied. And there's this  
14 perception that those rulings didn't deal with existing rights  
15 at all, that they only dealt with new appropriations. It's  
16 true that they only denied new appropriations. That's what the  
17 point of that was.

18 And if you recall, there were hundreds of thousands  
19 of acre-feet of water of applications in Coyote Spring Valley.  
20 Hearings were held in 2001 on those applications. The State  
21 Engineer at our -- at SNWA's request ordered the pump test  
22 because SNWA had -- I'm sorry, Las Vegas Valley Water District  
23 at the time had those -- had a lot of those water rights in  
24 that queue, and after the pump test, after the pump test  
25 reports were submitted, the State Engineer denied all of the

1 new applications, but he also said, It remains unclear. That's  
2 the language. It remains unclear whether there's water  
3 available for new development from existing rights. And we  
4 have --

5 I'm sorry, Rob, but that's towards the end too.

6 (Pause in the proceedings.)

7 MR. TAGGART: Yeah, this is it. So this is Record on  
8 Appeal 780. And this is the State Engineer's finding that,

9 The amount and location of groundwater that  
10 can be developed without capture of and conflict  
11 with senior rights on the Muddy -- and Muddy  
12 River and Springs remains unclear, but the  
13 evidence is overwhelming that unappropriated  
14 water does not exist.

15 So that's not necessarily a red light, but I think  
16 it's -- I think it's orange or at least yellow. So that's our  
17 point there.

18 So getting back to the evidence that was relied upon  
19 by the State Engineer, there was a lot of points made about  
20 this already.

21 The -- oh, before I do though, the Water Authority  
22 and the District lost water rights in those rulings. We  
23 understood that, and we accepted that. More importantly, the  
24 water authority has water in the Lower White River Flow System.  
25 Mr. Robison mentioned it yesterday. We have thousands of

1 acre-feet that may be considered junior, that we may lose. I'm  
2 not going to say we will because we haven't got there yet. But  
3 we have 1989 water rights that are, you know, dangerously close  
4 to what that cutoff line would be. So we understand what that  
5 means and the authority has understood, well, that's part of  
6 just living with the world the way it is, that there was no  
7 water available for everyone.

8           So I just want to make that clear.

9           So Rob, could you go to Slide 39.

10           We talked about the hydrographs already and what the  
11 State Engineer looked at, and I think he -- his counsel did a  
12 good job of explaining it from this poster board of how those  
13 hydrographs were looked at and how they were compared to each  
14 other.

15           So the -- you know, this page 41 in my slides is ROA  
16 41982, and this is the panels of hydrographs in each basin, and  
17 it's laid out to be a comparison visually during that pink  
18 shaded area, which is the aquifer test.

19           So again, this is the primary sort of evidence that  
20 was used. The State Engineer is showing it all on the map  
21 there.

22           And what is important to understand too is that after  
23 the 1169 pump test and after the reports were submitted and  
24 then after the new applications for more water were denied, we  
25 had a period of time that went by, and we call this the

1 recovery period where we look to see what the aquifer did.

2           Sometimes when a well is pumped and you stop pumping  
3 it, the water comes back to the same level it was at when you  
4 started pumping it. You kind of wonder. That's what they do  
5 when they do a pump test. You know, how much -- how quickly is  
6 this thing going to recharge after I pump it? Otherwise it  
7 will just go dry.

8           So when they -- so looking at the recovery of the  
9 system after the pump test was the new information that the  
10 State Engineer had in 1303 hearing, and so when people say,  
11 well, what's new? They didn't have any new evidence; this is  
12 all arbitrary. That is what was critical. That was, you know,  
13 seeing that 3.2 at Warm Springs West Gage was not far off of  
14 where the flows were at the gage, and it wasn't increasing.  
15 These are the types of things of the additional time that  
16 occurred after the pump test that raised concerns and that the  
17 State Engineer looked at. So that was the additional  
18 information that he had.

19           And in his ruling, he indicates that the recovery did  
20 not occur and has not come back to pretest levels. That was  
21 kind of the language that he used. And that's critical to how  
22 the system can respond to additional pumping. I think that was  
23 his point is if additional pumping occurs, you can -- I might  
24 not have the ability to cut it off and get that water level  
25 back. That's the problem.

1           If he could just cut off water use and bring the  
2 water back -- Mr. Dotson's client wants the water back -- that  
3 would be one thing, but I think they learned that they did the  
4 pump tests. If it lowers even a half foot, even a half a foot  
5 across 1100 miles that, you know, that 6 inches on that ruler  
6 you saw yesterday, that's 1100 miles. That's twice the size of  
7 the Las Vegas Valley is what we're talking about.

8           And how much water disappears when a half a foot only  
9 decline occurs, and if it occurs everywhere. It's telling us  
10 something. It's telling us it's the canary in the coal mine  
11 about what happens if you really pump it, if you start to  
12 really pump this system.

13           So the State Engineer found that the aquifer test  
14 data was the most persuasive, and I think we've talked about  
15 why that was reasonable for him to make that conclusion. There  
16 was a lot of information put in about geology and mainly CSI,  
17 Lincoln County and Vidler put in a lot of geophysical and  
18 geologic information based upon studies that they completed.

19           And their position was that these created a  
20 compartment or some sort of barrier so that they could pump,  
21 and it wouldn't effect the area outside that compartment.

22           And in the State Engineer's ruling, he said that he  
23 wasn't persuaded that the compartments exist.

24           And so two points on that. One is, he did consider  
25 their evidence, and he found it not to be persuasive. Two is

1 that they knew that geology would be one of the factors the  
2 State Engineer looked at, those criteria we talked about  
3 yesterday. And so there was no due process problem. They knew  
4 exactly what the State Engineer would be looking at, and they  
5 submitted what they submitted.

6 What the criteria is, again, I talked about this  
7 yesterday, but I'll just say this quickly is if someone were to  
8 say I want all of you to go out and measure how high  
9 Mt. Charleston is, and you might have five experts all go out  
10 and do it a different way. And one might, you know, use a  
11 pedometer, walking up there. One might use a GPS. You know,  
12 there might be four or five different methods of how to do it.  
13 And then when they all come back, someone might say, well, I'm  
14 going to tell you what I think the most reliable of those five  
15 methods you just applied are to finding out what the true  
16 height of Mt. Charleston is. That's all the criteria are is  
17 just the State Engineer ranking what the most persuasive  
18 evidence is that he received from the experts.

19 So there's groundwater budget data. There's climate  
20 evidence. This has all been discussed. I think it's the State  
21 Engineer. I won't go through this in detail except to say that  
22 the State Engineer in his order mentioned this evidence, which  
23 indicates that he reviewed this evidence, and explained why he  
24 felt that it was not persuasive.

25 So one of the arguments is that he didn't look at our

1 evidence. Well, that's not true. What he did is he judged it.  
2 He weighed it, and he found it to not be persuasive. So  
3 climate evidence, for instance, the State Engineer reviews this  
4 in his order, and indicates that, you know, many parties argued  
5 about climate.

6 And we had a lot of testimony about this. We had a  
7 lot of analysis of it. We had experts from the federal  
8 government who looked at climate throughout the area outside  
9 the Lower White River Flow System and looked at climate and saw  
10 what it was doing and then looked at over climate. We debated  
11 which climate data should we look at, which weather station  
12 should be considered. Are some too far away? Are some the  
13 right ones to use? And then the hydrographs were analyzed.

14 And I don't know if I can get back to -- back here,  
15 this is Slide 41. That lower panel, and this is all those  
16 hydrographs, that's what that lower panel is. It's climate.  
17 It's showing what the precipitation is, the average  
18 precipitation in the area is based on that expert's review.  
19 That's climate.

20 And then the expert would get up and testify, well,  
21 here's what we see in the hydrographs. Here's what we'd expect  
22 to see based on the climate, but here's what we see. So it  
23 must not be climate, or maybe it is climate. That's what they  
24 did. And that's what the reports are full of all of that. So  
25 the State Engineer looked at all of that, and his judgment can

1 be upheld based on that because it's reasonable what he came up  
2 with.

3           Okay. All right. So again, I'm going to talk about  
4 Kane Spring. I think we have a -- again, I said it earlier.  
5 The primary area of the Lower White River Flow System are  
6 the -- is Coyote Spring, Hidden and Garnet, Muddy River Springs  
7 area, California Wash. We're ending up to talking a lot about  
8 Kane, and they -- and we should because it's a big concern with  
9 Vidler, but, you know, it's a bit overshadowing the bigger  
10 issue with what we're trying to do with the Lower White River  
11 Flow System. But a lot has been said about it. I think that  
12 the first thing I want to say is like this picture here, which  
13 is Slide Number 53, this is the monitor well for Kane Spring,  
14 and it's next to their production well. It's right on the  
15 boundary between Kane Spring and Coyote Spring Valley.

16           That's just the fact that it's located right there.  
17 If they got as close as they could to Kane Spring Valley  
18 without being in it for a reason --

19           THE COURT: You mean to Coyote Spring Valley?

20           MR. TAGGART: To Coyote Spring Valley. I'm sorry.

21           And then they developed a biological opinion with the  
22 Fish and Wildlife Service to address potential impacts of the  
23 Moapa dace. And I'm sure they don't believe that any pumping  
24 in Kane Spring will affect the Moapa dace. And they may have  
25 entered the agreement believing that, but the Fish and Wildlife

1 Service certainly believed that pumping in Kane Springs might  
2 affect the Moapa dace and to the point of requiring them to go  
3 through all of those exercises under the Endangered Species  
4 Act.

5           We've heard that, well, there was no pumping in Kane  
6 Spring Valley under -- during the pump test. Well, that  
7 doesn't -- I mean, that's true, but the water levels were  
8 monitored. So the water levels in Kane Springs were monitored  
9 based on the pumping that did occur in the pump test. So  
10 that's significant. That's significant information that was  
11 collected.

12           A question --

13           THE COURT: Meaning even though there was no pumping  
14 going on in the Kane Springs well, the level of the water in  
15 the Kane Springs well was still getting monitored?

16           MR. TAGGART: Right. Right. So they were monitoring  
17 what was happening in Kane Springs as a result of pumping  
18 elsewhere.

19           And so arguments have been made there was no notice  
20 that Kane Spring might get added. Well, I think they were  
21 there at the hearing arguing it shouldn't be, and hard to  
22 believe that they didn't know that it might get added if they  
23 were putting on evidence that it shouldn't be in.

24           And there were arguments about how the use of the  
25 word attenuated was in the State Engineer's order.

1 Well, it's farther away from the pumping center than  
2 other places where the monitoring of impacts was greater. So  
3 it just stands to reason that as you get further away the  
4 impacts would be less attenuated. And I think that's what the  
5 State Engineer meant. That doesn't mean they don't exist  
6 there. It just means that they are less at distance, and I  
7 think the State Engineer acknowledged that.

8 And ultimately there's a hydrograph that was reviewed  
9 from the wells in Kane Spring versus the wells in Coyote  
10 Spring, and it was the State Engineer's judgment from those  
11 hydrographs that there was a significant enough connection to  
12 add them.

13 There's a case called *Eureka County v. State*  
14 *Engineer*. And again, this is a case that has been cited to.  
15 This wasn't raised. It was raised in the briefs, but it wasn't  
16 raised in argument, but I think I need to address it in case it  
17 gets reraised later. That the State Engineer essentially can't  
18 bifurcate the proceeding. You also heard argument that its  
19 segmentation, like the CEQA in California would prohibit.

20 Well, isn't dividing up the basins and not looking at  
21 them in isolation, wouldn't that be segmentation? If you were  
22 going to ignore what the aggregate impact is of the five  
23 together because of their separate -- their original separate  
24 nature if, you know, that sounds like segmentation to me.

25 But the argument is that the *Eureka County* case,

1 *Eureka County versus State Engineer*, and this case was about a  
2 groundwater project that was going to dry up a spring, okay.  
3 Again, this is not a case of first impression that we're in  
4 here. Groundwater, major mining project, going to dry up a  
5 small spring in Kobeh Valley.

6 And the question was, and the State Engineer said, I  
7 understand that there's going to be an impact to that spring  
8 from groundwater pumping, and I am going to require a  
9 mitigation plan, and the Supreme Court -- but I don't -- but I  
10 haven't seen the mitigation plan yet, but I'm going to require  
11 one. And the Supreme Court said that's not good enough. You  
12 can't make a decision that a mitigation plan will avoid a  
13 conflict if you don't have the mitigation plan in front of you  
14 first. You have to have presently known substantial evidence,  
15 presently known substantial evidence.

16 And I think -- and I'm going to get to this in a  
17 second, Mr. Lake for Center for Biological Diversity talked  
18 about this case too and how it relates to the steady-state  
19 finding of the State Engineer.

20 But this other point, so can the State Engineer  
21 bifurcate? The argument is he can't bifurcate because if he  
22 does facts first it's going to -- it's based on -- it's not  
23 based on presently known evidence. This is completely  
24 different.

25 This is a traditional method of making the factual

1 findings first and then doing the policy decisions later. And  
2 the State Engineer is deferring management decisions to a later  
3 time. He didn't authorize a conflict -- well, assuming that --  
4 I mean, we've argued that his conflict decision was incorrect,  
5 but assuming we're right on that, he did not rely on evidence  
6 in the way that occurred in Eureka County.

7 Now, I think Mr. Lake's point though is that the  
8 State Engineer heard evidence about the steady state, and maybe  
9 I should -- you know, I'm going to get to that, but the point  
10 there was some witnesses said, you know, it looks like a -- and  
11 I hope -- let me put it into context is we're talking about  
12 Warm Springs West Gage. We're talking about the 3.2 flow rate  
13 at Warm Springs West Gage, and whether or not that was  
14 stabilizing, whether or not that was continuing to decline or  
15 not. Some people thought that that was continuing to decline.  
16 The State Engineer said it's approaching steady state. That's  
17 the finding that he made. Witnesses testified about this.

18 And one witness said, well, I need to see a few more  
19 years of evidence before I could say that it's reached steady  
20 state. That was Mr. Felling (phonetic), but you asked, well,  
21 when is enough enough? I mean, when should -- you know, can't  
22 we just be asking for more data all the time? We get that  
23 question all the time. More data is always better, according  
24 to the experts. More models, more, you know, more well data,  
25 but I think it's -- I think you have to think in context to the

1 actual decision.

2           If you have ten years of flow data and something is  
3 doing something on a trend versus two years, ten is going to be  
4 more valuable than two. So I don't think it's an indefinite  
5 period of time, but I think -- I mean, I think even  
6 Mr. Felling's testimony wasn't he needed forever. He needed a  
7 little bit more time to really conclude that it was equalizing.  
8 And I think that's why the State Engineer said it's  
9 approaching. They didn't definitively say it is. They said  
10 it's approaching. And so that's a little bit about that.

11           So the next point that I want to make is about  
12 conjunctive management. So -- so conjunctive management, what  
13 is that? So we talked about this before. There's been  
14 statements that well, the groundwater and the surface water  
15 have always been managed separately in Nevada because they have  
16 two separate chapters. Well, that's pretty simple of an  
17 argument. The reason we have two separate chapters is because  
18 LCB decided to make them two separate chapters for whatever  
19 reason LCB decided to do that back in 1939, and LCB has, you  
20 know, interesting rules about why it does things, why it uses  
21 certain words in certain places at certain times. So that's  
22 the first point.

23           The second is that the water law surface water was  
24 adopted in 1905, and then through 1905 through 1913 it was  
25 litigated. And so we think of it as kind of between 1905 and

1 1913 the water law was adopted, the surface water.

2 Then in 1939, the groundwater law was adopted. So  
3 that's Chapter 534, surface; 533 was the initial one surface.  
4 Then 534.

5 534 is just a bolt on to 533. The reason we know  
6 that is that in -- so the reason we know that is NRS 533.370.  
7 So this is in the surface water chapter, 533.370.

8 THE COURT: And this is slide 57?

9 MR. TAGGART: Yes, it is. Thank you.

10 And this is the law that applies to all applications  
11 that are filed in the State of Nevada, all water right  
12 applications, ground and surface. So if I wanted to -- if I  
13 file -- every application that was ever filed by any of these  
14 parties in this case was filed under Chapter 533, under  
15 533.370. And it says the State Engineer has to see if there's  
16 water available for appropriation, see if it conflicts with  
17 existing rights and see if it threatens to prove detrimental to  
18 the public interest. So those are the three main things the  
19 State Engineer has to look at under 533.370, sub 2. And so  
20 when the legislature adopted 534 for groundwater, it said State  
21 Engineer use the service water statute 533 to approve  
22 applications. So they're connected. They have some, you  
23 know --

24 THE COURT: Interaction.

25 MR. TAGGART: -- interaction.

1           But what's even more important is, and I think  
2 Mr. Carlson said this yesterday too is that one of the first  
3 statutes in 534 says that everything that's issued is issued  
4 subject to existing rights. What were they talking about,  
5 right? They had to be.

6           And then under 533.370, it says that you cannot  
7 approve an application if it conflicts with existing rights,  
8 and 533 must have been talking about surface and ground. So  
9 there's always been this interaction, this interplay between  
10 those two chapters.

11           And this is a slide here, Slide Number 58, and  
12 actually that should say authority for conjunctive management.

13           THE COURT: Conjunctive management.

14           MR. TAGGART: I'm sorry. We worked on some of these  
15 last night.

16           But this is a series of cases that we cited to in our  
17 brief, maybe not all of them. So I'm going to -- you know, so  
18 if somebody wants to object, they can, but if you survey our  
19 water law, like that Orr Ditch, *U.S. v. Orr Ditch* in 2010,  
20 that's the case I talked about yesterday where the Ninth  
21 Circuit said a surface water court, a surface water decree  
22 court has jurisdiction over groundwater right that might  
23 interfere with the surface water.

24           *Eureka County versus State Engineer*, that's what we  
25 talked about a minute ago. The, you know, again, there's a lot

1 here. *Griffin v. Westergard* was from the 1980s, and it was  
2 ground -- that was the one I talked about. It was Smith  
3 Valley, not Mason Valley, but it was Smith Valley, Nevada. It  
4 was *Groundwater Pumping versus the Walker River*.

5 *Cappaert*, right, I talked about that already in 1976.  
6 1976. *Pyramid Lake Paiute Tribe versus Ricci*. That was  
7 groundwater being appropriated in Dodge Flat, and it  
8 involved -- you read the case. It talks about water quality in  
9 the Truckee River, making sure that that's -- there's enough  
10 water for that.

11 So this isn't new. This has been going on for some  
12 time. You know, these issues needing to address conjunctive  
13 management.

14 So I guess I don't know whether this is the right way  
15 to look at it, but if the State Engineer doesn't have the  
16 authority to do conjunctive management, he's going to get in a  
17 lot of trouble from the courts, because the courts have told  
18 him he better. The courts don't care if I have a client, and I  
19 do, who have surface water rights that are being taken away by  
20 groundwater pumpers. I have one here, and I have one in other  
21 parts of the State, and, you know, it doesn't really matter  
22 whether it's coming -- whether a groundwater well is taking the  
23 water or somebody went up and put a ditch in up gradient from  
24 me and took my water. It doesn't really matter. It doesn't  
25 matter where the headwaters are. It doesn't matter whether

1 they're in Clark or Lincoln. It just matters that somebody's  
2 taking my water. So that's the last I'm going to mention of  
3 conjunctive management.

4 So we think there's clear evidence that the State  
5 Engineer relied upon to come up with the connection between the  
6 basins and the same source of water.

7 So now I want to talk about -- now I'm going to talk  
8 about the 8,000 acre-foot cap. Okay. So a number of questions  
9 came from the bench to parties here about -- I think the Court  
10 asked, you know, is it your position that no water can -- water  
11 can never be taken away? I think one of the answers was the  
12 State can take it -- or the State giveth, the State taketh  
13 away. I think I've said that in other cases too.

14 But the answer back was, there has to be a process.  
15 He can't overrule. He has to administer. That was an answer  
16 that you got as well.

17 So and I agree. There's a residual power that the  
18 State Engineer has over all water rights that he's granted.  
19 And it is -- it is part of the water law, and it's also part of  
20 the public trust doctrine now. And that's this Mineral County  
21 case that we talked about over and over again.

22 So the procedure that the State Engineer must follow  
23 to curtail existing law, and there is a process. So most of  
24 the parties conceded that, yes, the State Engineer can take  
25 water away, but he has to follow a process.

1           And so you asked, and I think you asked Mr. Bolotin,  
2 so is the State Engineer going to decide what the rules are?  
3 No. The process is decided by the legislature, and the Courts  
4 will review what the State Engineer does if someone appeals.  
5 My money is on someone appealing.

6           So that's -- so now I'm going to talk about what that  
7 process is, and it starts with understanding what is the supply  
8 of water that's available. That's the first step that the  
9 State Engineer has to do is understand how much water is  
10 available. That's what he has to do when he grants new water  
11 right applications. That's what the statutes say he's supposed  
12 to do here. 534.110 sub 6 I'll talk about in a second which  
13 talks about that.

14           How much water is available -- or first, what's the  
15 supply? How much is available for -- because there could be a  
16 lot more water in a basin, groundwater than can be pumped on an  
17 annual basis, on an annual sustainable long-term basis. So how  
18 much, you know, what's the aquifer? How much can be pumped?  
19 Is there a shortage? How do you deal with the shortage through  
20 curtailment? So there's -- that is the process. And  
21 unfortunately, there will be winners and losers, but it has to  
22 happen. It can't be avoided.

23           So I think my client urges that we not start this all  
24 over again. I mean, I think the State Engineer did a good job  
25 with 1309 except for what we've argued against, and this is our

1 starting point, and we need to move to the next level and start  
2 to deal with the policy questions that we talked about a little  
3 bit yesterday.

4 So the -- so Slide Number 6 of this new presentation,  
5 which is my third, and it's --

6 THE COURT: And do we have a copy of it?

7 MR. TAGGART: Not yet, but I think I have a copy  
8 here. And it is -- it's the 8,000 acre-foot cap presentation.

9 The -- my point here is that we know how curtailment  
10 happens because it's always happened, maybe not this complex  
11 and maybe not this dramatic, but on river systems when there's  
12 not enough water every year, it goes into curtailment, or it  
13 goes into regulation it's sometimes called. And priorities are  
14 cut off. The youngest priorities are cut off as the year goes  
15 by, and there's water commissioners who run rivers and decide  
16 who's going to get water, and they have a system on how they do  
17 that. The State Engineer oversees that work for Courts in  
18 Nevada who have entered decrees and acts as the water  
19 commissioner to those Courts and does that. And so there's a  
20 system.

21 And like I said yesterday, I think that that's the  
22 color that we have to use whenever we're looking at statutes  
23 that codify that common law system.

24 Here is the list of -- this is Slide 7. Here's the  
25 list of statutes that apply. There's more than this, but I

1 think these are the critical ones. We talked about 532.120 and  
2 534.120 already.

3 532.167, sub 3, he has a duty to perform an estimate  
4 of the amount of all groundwater that is available in a basin.  
5 That was like my first point. First he has to decide what the  
6 supply is. He has to determine the specific yield of aquifers.  
7 That's a term that means how much water is in an aquifer on a  
8 cubic meter basis usually, like how much of that area is filled  
9 with water.

10 Then he had --

11 THE COURT: Well, let me just ask a quick question.  
12 So the perennial yield has to do with a basin, but that is  
13 different than the yield of an aquifer?

14 MR. TAGGART: It is. Well, a specific yield is a  
15 term, a hydrologic term that I just did the best I could on  
16 explaining what it is.

17 THE COURT: Okay.

18 MR. TAGGART: It's not perennial yield.

19 THE COURT: It's not the same as perennial yield?

20 MR. TAGGART: It's different.

21 THE COURT: Okay.

22 MR. TAGGART: And perennial yield is this notion of  
23 how much can you develop on an annual basis and maintain  
24 equilibrium. But I can tell you that that discussion has been  
25 years and years and years too have we fought over what that

1 exactly means, but really what it is, is what's the  
2 sustainable -- I like sustainable yield because it kind of  
3 conveys the idea better of what the goal is, but it's the  
4 amount of water that on an annual basis can be pumped and be  
5 there, you know, forever or, you know, out into time.

6 And so -- but specific yield is more of a -- it's  
7 more of a hydrologic term about how they figure out how much  
8 water is in an aquifer.

9 THE COURT: Okay.

10 MR. TAGGART: And then 534.110, sub 6, that's what  
11 we're going to talk about a lot more here, because that's the  
12 curtailment statute, and it says the groundwater supply may not  
13 be adequate for the needs of all permittees. I have a couple  
14 slides on that.

15 We talked about subject to existing rights, and we  
16 talk about the conjunctive management -- and I'm sorry -- yeah,  
17 the manage conjunctively legislative declaration. So now we've  
18 got an -- I mean, that's a water law right there on one slide.

19 But public trust doctrine, I want to talk about that  
20 while I can.

21 And so the public trust doctrine is a what we -- I  
22 used to call it the wildcard of western water law. It  
23 didn't -- it started in -- well, California adopted it in the  
24 water law first, and then in Nevada, there was a case in the  
25 '80s -- in the '90s, and it's Mineral County. I'm blanking

1 on the name, but it was the first case about Walker Lake. And  
2 there's a -- there's a concurrence in that opinion by Justice  
3 Rose, and he said that if we don't have the public trust  
4 doctrine in this case in this state we should. And -- but he  
5 wasn't in the majority.

6 And then fast-forward to last year or the year before  
7 when we got the Mineral County case, Walker Lake again. It  
8 bounced back and forth between the Federal courts and the State  
9 courts because it's a federal court decree that governs the  
10 surface water on the Walker River. And the Supreme Court was  
11 being asked, and this has been talked about already a bit.

12 The Supreme Court was being asked by the Ninth  
13 Circuit on a certified question is -- is it possible for the  
14 water rights in the Walker River decree to be reallocated for  
15 the benefit of Walker Lake and the environmental needs of  
16 Walker Lake. And the Court said no. It said that there is a  
17 public trust doctrine in Nevada, but decrees on river systems  
18 can't be changed.

19 And so it really had some tough decisions to make,  
20 but it also told the State Engineer that this public trust  
21 doctrine thing really matters. It's -- there was a Lawrence  
22 (phonetic) case that came before it, and it established the  
23 public trust doctrine in Nevada for land underneath submerged  
24 waters, but the Mineral County case said the State Engineer  
25 better take into account the needs of the public trust. What

1 does that mean? That means that the water is owned by the  
2 public, and the State Engineer is the trustee of that water.  
3 And when he gives it out, he has to make sure it's being used  
4 according to that trust obligation that he has to the public.

5 And it also involves retaining powers that the State  
6 Engineer -- that's why call it the wildcard. We know what the  
7 statutory retained powers are of the State Engineer over  
8 groundwater right. They're mentioned in the permit terms.  
9 What the -- what the public trust doctrine retains is, you  
10 know, is not as clear.

11 So, but we know now that the State Engineer has to  
12 keep that in mind. Why is it important in this case? We think  
13 that if there, you know, if he -- if he could some -- I mean,  
14 how could someone argue that the State Engineer cannot take the  
15 Moapa Basin into account? I don't know that anyone has  
16 actually argued that, but that was a really, you know, hard  
17 position I think to take in today's day and age.

18 So the question is, and I'll just jump to that now on  
19 the ESA stuff, is that --

20 THE COURT: So let me --

21 I think what has been argued is that -- well, that he  
22 made that determination under the Endangered Species Act as  
23 opposed to public trust doctrine.

24 MR. TAGGART: Right.

25 THE COURT: I think that's what that argument was

1 about that it was improper for him to determine that there  
2 could be the potential of a take under the Endangered Species  
3 Act because of that, that that was faulty logic, I guess.

4 MR. TAGGART: Right. Uh-huh.

5 THE COURT: I think that's what the argument was.

6 MR. TAGGART: Yes. And that he -- I think even some  
7 have argued that he made a determination that take will occur,  
8 and only the federal government can do that.

9 So public interest, public trust, those I think are  
10 separate ideas. Public trust doctrine is what I kind of just  
11 talked about. Public interest is mentioned in the statute; it  
12 says something the State Engineer has to account for, but they  
13 blur into each other.

14 So when the State Engineer wrote 1309 and --

15 THE COURT: So just so that I am clear, the public  
16 interest is the public interest that's referred to in the  
17 statute under the declaration?

18 MR. TAGGART: Yes.

19 THE COURT: And the public trust doctrine is  
20 something separate that was adopted by our State through case  
21 law?

22 MR. TAGGART: Right.

23 THE COURT: Okay.

24 MR. TAGGART: And public interest is not public  
25 trust, public interest is one of the factors the State Engineer

1 has to consider when he approves an application. He has to  
2 look at whether it threatens to prove detrimental to the public  
3 interest.

4 And so arguments have been made that the decision  
5 that's made by the State Engineer when he approves an  
6 application that something that doesn't threaten to prove  
7 detriment to the public interest, that after he approves it, he  
8 can't go back --

9 THE COURT: And change it.

10 MR. TAGGART: -- and change that, right.

11 THE COURT: Because the objection and all that kind  
12 of stuff has to happen at the time when it is issued.

13 MR. TAGGART: Right. Now, what I call that is it's  
14 an argument that the public interest inquiry does not survive  
15 the approval of the application. You know, does it or doesn't  
16 it survive that approval, and I think it has to because the  
17 State Engineer doesn't know everything about what's going to  
18 happen when he grants a water right. And many times he grants  
19 a water right based upon a mitigation plan, a monitoring plan.  
20 And if those things -- if things turn out to be different than  
21 he thought when he granted the water right, then he has to have  
22 the ability to go back.

23 Now, the other part of how he approves the water  
24 application is whether it conflicts with another water right.  
25 So what happens if it does? What happens if he makes a finding

1 when he approves the water right that it won't conflict with  
2 anyone, but then it does?

3 THE COURT: But then wouldn't he go through the  
4 statutory process at that point to do that?

5 MR. TAGGART: Well, when he issues permits, he says  
6 in them subject to existing rights.

7 THE COURT: Right.

8 MR. TAGGART: And he has a statute that says all  
9 water rights are issued subject to existing rights.

10 THE COURT: Right.

11 MR. TAGGART: So on that one it's clear that it  
12 survives the approval of the water right.

13 And while I'm on that, I'm going to say I think of  
14 curtailment in two different ways. One is conflict  
15 curtailment, and one is priority curtailment. So conflict  
16 curtailment is if CSI's pumping impacts another groundwater  
17 right, the State Engineer can regulate CSI's pumping, or  
18 anyone, for that conflict. That's conflict curtailment. And  
19 that's I think what you said. There's a process for that.

20 THE COURT: Right.

21 MR. TAGGART: Priority curtailment is what we're  
22 dealing with here where if there's not enough water in the  
23 system for all the water rights, then you start to cut people  
24 off who are the most junior.

25 So whether the -- you know, whether the public

1 interest inquiry survives the approval, like the conflicts  
2 obviously does, is an open question. And I would hope, and I  
3 think of Justice Rose's concurrence in that case again, I would  
4 hope the State Engineer has the power to go back and fix a  
5 problem if he authorizes pumping that impacts a fish or  
6 something like that.

7 But in 534.120, sub 1, in a designated basin, he has  
8 the power to enter an order that's essential for the welfare of  
9 the area. And that is a lot like public interest. So in our  
10 view, that 534.120 authorizes orders that are essential for the  
11 welfare. So to the extent he can't take into account, you  
12 know, the ESA, he can take into account the needs of the fish  
13 because it's in the well -- it's essential to the welfare of  
14 the area. And I think that's what we want the conclusion to be  
15 because the State Engineer has to take the environment into  
16 account.

17 Now, so that's the point there. Oh, yes. So also I  
18 think it's clear when you read the State Engineer's decision  
19 that he did refer to the public interest. He did not try to  
20 enforce the Endangered Species Act. He pointed out that there  
21 was the potential for take. There was the potential for State  
22 liability. And he should take that into account. And the  
23 potential for liability is listed in all of those cases that we  
24 have cited, that Center for Biological Diversity has cited, and  
25 in particular, the *Strahan* case about -- let me make sure I get

1 this right. One of them had to do with lobster traps and  
2 whales.

3 But the point being that if the State Engineer  
4 authorizes a groundwater permit that ends up threatening an  
5 endangered species, he may have direct liability. He may have  
6 liability through proximate cause analysis.

7 THE COURT: Right.

8 MR. TAGGART: And --

9 THE COURT: Even though he's not the one -- is this  
10 the third party --

11 MR. TAGGART: Right.

12 THE COURT: Right. Where even though the third party  
13 is actually doing the harm, that because they issued out  
14 whatever the regulation, then they would be liable?

15 MR. TAGGART: Right.

16 THE COURT: Okay.

17 MR. TAGGART: So, yeah. So we have -- this is Slide  
18 Number 53. *Strahan* was the case about the whales in  
19 Massachusetts. Massachusetts issued licenses for lobster,  
20 gillnets.

21 There's the Hawaii case, and then there's also this  
22 case *Aransas Project vs. Shaw*, which was cited in the reply  
23 briefs. So what that case is important about is it's a  
24 question of proximate cause. And if it's too attenuated, the  
25 State's nexus, the State action in the nexus of that action to

1 the actual take, then if it's too attenuated, then it's not a  
2 proximate cause. There's intervening causes, as I'm  
3 remembering from law school and torts.

4 There's other -- if there's other reasons, he might  
5 not be liable.

6 So the question to ask is could the State Engineer --  
7 is pumping a direct enough effect on the water flow for fish to  
8 be considered a proximate cause, or are there a lot of other  
9 intervening factors? And in this particular case which did not  
10 find the State to be liable, there were many other intervening  
11 factors. I think it was a crane, and the State action was  
12 affecting the feeding area, the crane. They were having to go  
13 to other places, and so how the crane populations were  
14 decreasing, there were a lot more intervening causes about why  
15 that was happening.

16 So I think it was fair for the State Engineer to take  
17 this into account, the potential for liability, shouldn't stick  
18 his head in the sand when it comes to that, particularly when  
19 this case was out there.

20 So now I'm on Slide Number 9. So people talked about  
21 what's the process that you can -- that the State Engineer can  
22 take water away if he follows the process, if he administers  
23 and doesn't overrule. And so how is he going to do that here?  
24 534.110 talks through this process. 534.110(2)(b) says he can  
25 conduct pumping tests to determine if pumping is -- if

1 overpumping is indicated to determine the specific yield of  
2 aquifers and determine the permeability characteristics. He  
3 did that, Rule 1169. And then he -- I got all of the data from  
4 it and made findings based upon that data.

5 And then 534.110, Sub 6.

6 The State Engineer may limit withdrawals --  
7 that's curtailment -- where it appears that the  
8 average annual replenishment to the groundwater  
9 supply may not be adequate to the needs of all  
10 permittees and vested right claimants. This is  
11 pretty explicit.

12 All permittees or all the water right owners for  
13 groundwater, all vested right claimants would be the Muddy  
14 River decree right holders in this case, and the -- and the  
15 State Engineer looked at whether the annual replenishment  
16 perennial yield to the groundwater supply is enough for all of  
17 those permittees and vested right claimants, and he found it's  
18 not.

19 So it says "may," and so that's the next step. You  
20 know, without belaboring critical management area, I mean,  
21 that's a whole other level. There's one of them in Nevada. At  
22 Steinman Valley was talked about, but in that he has a 10-year  
23 clock on when he must curtail. This may becomes a must after  
24 10 years in a critical management area. So that's the  
25 procedure.

1           Okay. Now, the 8,000 acre-foot cap was called rough  
2 justice, and that the State Engineer backed into a number. I  
3 think it was clear that there was an evidentiary basis for the  
4 8,000. There's on Slide Number 15 again, the first question  
5 that should be asked is what data did he have, and this is a  
6 list of the data that he had to make a determination that the  
7 8,000 is the proper cap. That's on page 15.

8           So the first was actual data of measured declines and  
9 groundwater levels and springs. That's Slide 16. He had this  
10 actual data from 1169. The District, Water District installed  
11 a lot of those monitor wells and maintained the annual reports  
12 on those wells and still to this day submits those reports to  
13 the State Engineer.

14           The record on appeal includes monitoring reports for  
15 this area for back a couple decades. So that's -- I mean,  
16 those are reams of paper, you know, with lines and numbers that  
17 are the data of water levels in all of these wells. That data  
18 is far more reliable than estimates and the types of water  
19 budgets that were used back when reconnaissance reports were  
20 done.

21           This is the map we've talked about before, but it  
22 just shows where all of those monitor wells are located. So  
23 throughout all the basins, they cited monitor wells, and there  
24 was some discussion about 1169 wasn't well thought out. Well,  
25 my client worked really hard and spent a lot of money getting

1 the Order 1169 approved by the State Engineer. So after he  
2 ordered it, you'll find other orders in the State Engineer's  
3 office about how the pump test would be done, where the monitor  
4 wells need to be located, how often they needed to be measured,  
5 how often the measurements need to be reported to the State  
6 Engineer. All of that was thought out and completed before the  
7 pump test began.

8 THE COURT: And this is Slide 17?

9 MR. TAGGART: Yes. On slide -- and now on Slide 18,  
10 I talked about this before, about the uniform water levels  
11 throughout the area. That was kind of point Number 1.

12 Slide 19 is that same slide with all the panels of  
13 the hydrographs.

14 Slide 20, he also had measurement data showing less  
15 flow in the Muddy River. So he used that. This has been  
16 described earlier about what the flows are now at 30,000 and  
17 when predevelopment flows were 36 or 37.

18 An expert testified about the reasons for declining  
19 flows in the Muddy River. Many believed it was the Lower White  
20 River Flow System. I think nearly all, and that pumping --  
21 pumping can be at a one-to-one impact to the river depending on  
22 how close the pumping is to the river.

23 There was evidence put on like this slide here, this  
24 is Slide 21, and this was an estimate of how much water was  
25 taken out of the river by groundwater pumping.

1           This is slide Number 22. Slide Number 22, which is  
2 another graph from the expert report that demonstrated -- that  
3 showed how the decrease in river flow corresponded to pumping  
4 in the Lower White River Flow System. He had analysis of water  
5 level and spring flow changes, and he reviewed those  
6 hydrographs. He was able to look at preaquifer test  
7 measurements, during the aquifer test measurements and post  
8 aquifer test measurements.

9           There was a statement made that, you know, why did  
10 the pump test have to return back to the number that it was  
11 at -- to the level that it was at before the start of the pump  
12 test, that that was arbitrary. Well, no, that's actually  
13 scientifically what the State Engineer determined was  
14 appropriate. You want to check to see if recovery gets back to  
15 the pretest levels. So he had that information.

16           This one here I don't think you've heard about yet.  
17 A correlation between water level and spring flow. Slide  
18 Number 25. So this particular -- this is the correlation  
19 between water level and flow at the spring. So yesterday I  
20 showed you that there was this monitor well called EH4, and  
21 it's really close to the Warm Springs area where the fish are,  
22 and they compared the water levels at that area, groundwater  
23 level to how much water flowed out of the spring, and checked  
24 to see whether those two things are correlated. So if water  
25 level changes, does flow change.

1           And so they used statistical methods to understand  
2 that correlation, and they found strong evidence that the  
3 groundwater pumping -- well, they found a correlation.

4           So let me point -- that's what this on Slide 27 looks  
5 like. So this little graph on the side is a plot that  
6 correlates. It's a statistical method that correlates the flow  
7 data points to the water level data points. And the closer  
8 they're aligned, the more correlation there is.

9           And the State Engineer looked at this, and this is  
10 the strongest evidence that changes in water level affect flow  
11 in the spring. So then -- so that was at the -- really close  
12 to the spring. That's why that monitor well was put there,  
13 EH4. It was put right real close to the spring to measure  
14 that.

15           Then they looked at, well, what happens between  
16 groundwater pumping in Coyote Spring Valley and EH4, and they  
17 checked that correlation. And that's what this chart -- that's  
18 what this chart shows. This is Slide 29, and they found a  
19 correlation between -- well, hold on a second.

20           Yeah, what I said is correct. My slides are a little  
21 backwards.

22           So this particular side, Slide Number 29 shows the  
23 correlation between the monitor well and the Warm Springs West  
24 Gage.

25           Then on Slide 27, that's the correlation between --

1 THE COURT: Oh, that's Coyote Springs, okay.

2 MR. TAGGART: Yeah, between Coyote Springs and EH4.

3 So the State Engineer looked at this.

4 Now, you know, is .93, our squared .93, is that a --  
5 well, is that a close enough correlation. That's a judgment  
6 for the State Engineer, but he thought it was.

7 And so that's what -- what he had too.

8 Again, this little map that I have on Slide 28, it'll  
9 show you where Warm Springs West is, and there's EH4. So down  
10 on the bottom in the middle there is a little EH4. So that's  
11 how close they are.

12 So he had that.

13 So that's uncontroverted evidence that the  
14 groundwater levels are directly tied to spring flows, and  
15 that's what he said. The high correlations also confirm that  
16 the hydrologic head in the aquifer is the main driver of spring  
17 discharge for the Springs, changes in groundwater level  
18 resulting in changes in flow.

19 So it was reasonable for him to conclude that  
20 groundwater pumping affects the spring flow.

21 Then there's the lack of the recovery data. I  
22 covered that earlier. So I won't go into that again.

23 And then we get to how did he come up with 8,000, and  
24 so 8,000 is how much water is approximately being pumped now,  
25 and he compared that to how much the flow is in Warm Springs

1 West Gage, and it didn't come out of -- he didn't back into it.  
2 It's not rough justice. It's the number of current pumping and  
3 what current pumping is causing to the spring. And his  
4 determination was the spring can handle that much pumping, but  
5 nothing more, and it may be less. And so it's really tied  
6 directly to what the existing amount of pumping is and what  
7 the -- and what's happening at the spring as a result of that.

8           Then he set a condition on the 8,000.

9           So -- so he said -- and this has been pointed out by  
10 parties that he said that the data is of an insufficient  
11 duration to make a determination with absolute assurance. This  
12 is slide number -- Slide Number 33. He said that continued  
13 monitoring is necessary to determine if this trend continues or  
14 if water levels are continuing to decline slowly. He noted  
15 that climate and recharge efficiency may dictate lower pumping,  
16 and monitoring will be used to measure if additional impacts  
17 occur.

18           So on this Slide 34, I say -- or I indicate that  
19 everyone -- I think it's pretty clear that 40,000 is too much.  
20 So he knew that. He knew 14 and a half thousand is too much  
21 because that's what was done during the pump test and led to  
22 significant declines.

23           So given that had to be less than 14 a half, then he  
24 had what existing pumping is and what it was causing. So he  
25 used that. That's reasonable.

1 By the key for my client is this commitment to  
2 continue to monitor and to -- and to reduce that if the Warm  
3 Springs West Gage continues to decline.

4 I think you're aware by now that we wanted a lower  
5 cap, but we're willing to accept the 8,000 acre-foot cap with  
6 that conditional lowering dependent upon additional evidence.

7 So on that we trust the State Engineer to monitor and  
8 take action if the flow continues to decline.

9 Okay. Just a reminder though that we don't think  
10 that that amount -- just because we accept that the 8,000 is a  
11 proper cap to stop the declines, that doesn't mean that we're  
12 conceding to conflicts. We already covered that, but that  
13 argument was made in the State Engineer's brief that -- or  
14 that's how we interpreted it. So there you have it.

15 The dace, that's already been talked about quite a  
16 bit. So I'm going to kind of skip over those slides.

17 Yeah. We -- just to quickly summarize in this Slide  
18 Number 39, small little areas of water coming up out of the  
19 ground. They accumulate into bigger channels. Those channels  
20 meet into each other. So that's what Pederson, Abcar  
21 (phonetic), Jones, that's what those are, plumber. They all  
22 come together to an eventual Gage, but they're really  
23 sensitive. They're high elevation. There's not a lot of flow.  
24 That's where the fish are, and, you know, small changes can be  
25 really significant.

1           So the State Engineer relied -- I went on earlier  
2 about why he could look at the dace, why he could take that  
3 into account. Our view is he has a couple of different  
4 reasons. We think the public interest concern survives the  
5 approval of an application. We think that 534.120 says  
6 essential -- he can enter rules that are essential for the  
7 welfare. That includes the fish. We think the public trust  
8 doctrine says that he has to consider environmental issues that  
9 are related to water development. So for all those reasons, it  
10 was proper for him to consider it. So now did he consider it  
11 properly?

12           He heard, you know, what evidence did he have?  
13 Again, that's where we start. He had the MOA among the  
14 parties. We've already talked about that. He had the  
15 biological opinion about the MOA. He had modeling that was  
16 done during that biological opinion. He had expert opinion at  
17 the hearing, and he had the test recovery data. So you already  
18 heard about the memorandum of agreement, that experts got  
19 together and determined what the proper triggers were to  
20 protect the fish, and they set those into the MOA.

21           Biological opinion was done to see whether or not  
22 those triggers were correct, whether the Fish and Wildlife  
23 Service would agree with that.

24           When the Fish and Wildlife Service did the biological  
25 opinion, it -- it ran an eco-hydrologic model, and that model

1 looked at the change in habitat as a result of change in flow.  
2 And it came up with quantitative conclusions about the  
3 percentage in linear footage of habitat that would be affected  
4 by changes in flow. So that's serious detailed evidence, and  
5 it was -- I think it was covered well before.

6 Two witnesses testified on behalf of the Southern  
7 Nevada Water Authority. One was Bob Williams, who was the  
8 former State Director of the Fish and Wildlife Service. That's  
9 on Slide 45.

10 Mr. Williams had been part of the MOA discussion. He  
11 talked about the needs of the fish and the point -- and the  
12 3.2.

13 Zane Marshall, who is a -- who is an expert in  
14 biology and has been studying fish in that area for decades, he  
15 testified regarding the flow rate of 3.2 and the critical  
16 nature of that flow rate to the fish. So that's Slide 46.

17 And then there was testimony from experts in the Fish  
18 and Wildlife Service. It's important to point out that the  
19 witnesses who testified for the Fish and Wildlife Service were  
20 biologists. They were not compliance employees. So there's  
21 been a lot said that, oh, well, these guys didn't say it was a  
22 take. Well, these guys wouldn't say it's a take. That's not  
23 what they do. They're in a whole different shop inside Fish  
24 and Wildlife Service about compliance and who enforce the  
25 endangered species act.

1           These individuals are more in charge of kind of  
2 managing populations and making sure that existing populations  
3 are properly -- the habitats are properly maintained and so  
4 forth.

5           Then -- then the State Engineer had the post aquifer  
6 recovery data that I talked about before.

7           So we think that the 8,000 acre-foot cap is also  
8 supported by the needs for the dace independent of the ESA  
9 completely, but then you can add to that the ESA.

10           And so I talked about that a bit already. State  
11 agencies -- so this is Slide Number 51. State agencies can be  
12 liable under the ESA. Groundwater pumpers can be liable under  
13 the ESA. We already know that.

14           *Cappaert* was specific to groundwater pumping in  
15 Nevada. The U.S. Supreme Court said you can't impact a fish  
16 like the desert -- the Devils Hole pupfish in that particular  
17 case. So these are the cases I flipped up to earlier about  
18 proximate cause. So that's Slide Number 55 -- 53 and 54, and  
19 then I want to talk about on Slide 55. Again, our point is  
20 that the State Engineer could consider the potential liability  
21 under the ESA. He didn't make a finding of take, and he should  
22 consider the potential liability under a federal statute like  
23 that.

24           The -- anyway, I've got a case I would tell you  
25 about, but I didn't cite to it. So I'm going to -- I'll keep

1 it there.

2           So then when we got *Cappaert*, and I know this has  
3 been talked about a little bit, but Devils Hole is a fish  
4 there. It's a waterhole that is warm, and the fish is  
5 endangered. And the State Engineer authorized groundwater  
6 pumping near that hole that had an effect on the level of that  
7 hole.

8           The State Engineer got enjoined by the Court, by the  
9 federal courts to prevent grave danger to the Devils Hole  
10 pupfish that could be destroyed. So that was conjunctive  
11 management. That was controlling groundwater to protect  
12 surface water, and so that the State Engineer doesn't take the  
13 fish into account, he's doing it at his own peril.

14           And also, interestingly in *Cappaert*, so this is on  
15 Slide 57, the Supreme Court, Justice Burger (phonetic) speaking  
16 said that Nevada itself may recognize the potential  
17 interrelationship between surface and groundwater. That was in  
18 1976. And then they recognize that groundwater and surface  
19 water are physically interrelated as integrated parts of the  
20 hydrologic system.

21           During Order 1303, the State Engineer heard testimony  
22 from a former Deputy State Engineer, Rick Felling, who was  
23 testifying on behalf of Nevada Energy. He said that -- so I'll  
24 slow down because I think this is more -- this is important.  
25 He says,

1 I think it's very important to honor the  
2 3.2 CFS trigger at Warm Springs West, and it's  
3 very much like the Devils Hole issue. Water  
4 levels in Devils Hole dropped. The habitat at  
5 Devils Hole pupfish were imperiled, and a  
6 Federal District Court Judge decided how much  
7 water needs to be in Devils Hole. We could very  
8 easily have the same situation in the Muddy  
9 River Springs area if flows in the Muddy River  
10 Springs dropped and imperil the dace, and then  
11 we would have a Federal District Judge managing  
12 water in Nevada and not the State, and I think  
13 it's for the benefit of all the users that the  
14 State continue to manage these water resources  
15 and not a Federal Court Judge.

16 So that's pretty serious. If that fish, if that 3.2  
17 gets breached and that -- and there starts to be habitat  
18 problems, and the Fish and Wildlife Service decides that  
19 they're going to use the ESA as a hammer, then all bets are off  
20 on where all of this goes.

21 And so that was what Mr. Felling was warning the  
22 State Engineer about at the hearing.

23 Okay. Let me just see if I have anything else to  
24 say, Your Honor.

25 THE COURT: Okay.

1 MR. TAGGART: So in summary, we think that Ruling  
2 1309 should be upheld, subject to the conflicts determination,  
3 and we think that because the State Engineer has to have the  
4 ability to upgrade and update the management system in Nevada  
5 based upon new evidence.

6 A lot of the concerns that have been raised here are  
7 valid, but are not right. There'll be things that are decided  
8 later, the who of who gets curtailed is not at issue for now.  
9 What's at issue now are the factual determinations that were  
10 made. I think it's clear that the State Engineer was correct,  
11 that there's a common source of water in all of these areas and  
12 that there is not enough water for all the permits in the  
13 decreed water in the river system.

14 So those two findings have to be upheld, and then we  
15 will move on to the next phase to answer some of those more  
16 difficult questions.

17 But at this stage, we think that the evidence is  
18 clearly substantial, and he certainly had authority to do what  
19 he did in 1309. Thank you.

20 THE COURT: All right. Thank you.

21 All right. So I think now would be a good time to  
22 take a break.

23 What is -- is 12 minutes enough? So we're back at  
24 10:30.

25 All right. Let's do that.

1 (Proceedings recessed at 10:18 a.m., until 10:30 a.m.)

2 THE COURT: Whenever you're ready.

3 MR. ROBISON: Ready, Your Honor.

4 On behalf of Coyote Springs, Kent Robison.

5 I just wanted to point out that our brief and  
6 intervention covered several topics, statutory authority, but  
7 more importantly, with respect to where we are right now in  
8 these proceedings with the Southern Nevada Water Authority  
9 saying 1309 is void in part for our interest and not void, and  
10 it is valid to jeopardize other petitioners, particularly  
11 Coyote Springs.

12 But what we want to talk about right now, Your Honor,  
13 with respect to intervention is the Endangered Species Act and  
14 the Muddy River Decree.

15 Mr. Dotson talked about the law of primacy and the  
16 law of recency yesterday. I submit to you, Your Honor, the law  
17 of logic and reason trumps that, and even a greater force is my  
18 partner who is a very involved in this case and wrote the  
19 briefs and is pregnant with knowledge and otherwise.

20 THE COURT: Pun intended.

21 MS. WINSTON: Hello, Your Honor.

22 THE COURT: Hello.

23 MS. WINSTON: Hannah Winston on behalf of Coyote  
24 Springs. Sorry, I was so busy snacking that I didn't set up my  
25 papers here.

**ARGUMENT FOR COYOTE SPRINGS**

1  
2 MS. WINSTON: As Mr. Robison just noted, there's  
3 three primary topics that I want to address today. The first  
4 are some of the arguments raised about the Endangered Species  
5 Act. The second is some of the arguments related to the Muddy  
6 River Decree, and the third are the issues raised by SNWA  
7 through Mr. Taggart this morning.

8 Beginning with the ESA, there are three important  
9 points. The first is the Center for Biological Diversity  
10 argues in their brief that no pumping can occur in the Lower  
11 White River Flow System. There is nothing in the record to  
12 support that, and one of the reasons that the -- I'll call them  
13 CBD -- that CBD makes that argument is that there could be some  
14 sort of liability under the ESA from any pumping in these  
15 basins.

16 The ROA does not support that argument. Mr. Taggart  
17 pointed out that the Fish and Wildlife experts who testified at  
18 the 1303 hearing were not compliance experts. They were  
19 biologists. And the center for CBD argues that those experts  
20 confirmed that any company in the Lower White River Flow System  
21 could harm the dace, and that simply isn't true.

22 Those experts, Sue Braumiller, Dr. Michael Schwemm  
23 testified that pumping and the rehabilitation of the dace can  
24 coexist. The Fish and Wildlife Service actually articulated  
25 that over 9,000 acre-feet was a sustainable amount to be pumped

1 throughout all of these basins. So that first issue that no  
2 pumping can occur is just not supported at all by the record,  
3 and certainly not by the Endangered Species Act.

4 Second, if CBD, if the State Engineer, if any water  
5 rights user is concerned about liability under the ESA, there  
6 are specific steps that those individuals or entities can take  
7 to avoid that liability, and that's exactly what CSI did by  
8 entering the 2006 MOA.

9 It's important to note that in the MOA there is a  
10 triggering point for flow, and the Fish and Wildlife Service  
11 has approved that number. So for the State Engineer or for the  
12 Center of Biological Diversity to say that there's this  
13 potential liability and that that decrease, that trigger rate  
14 isn't sufficient to avoid liability is quite disingenuous given  
15 that Fish and Wildlife Service has approved that amount in the  
16 MOA.

17 THE COURT: So let me just ask. So, you know, as far  
18 as the MOA, that really just has to do with those entities that  
19 are within that MOA; correct?

20 MS. WINSTON: That is correct, Your Honor.

21 THE COURT: Okay. So if we are presupposing, you  
22 know, if the State Engineer has the ability to delineate a  
23 larger area as a basin, then that MOA really only applies to  
24 that portion of that basin that those entities have entered  
25 into. It doesn't actually account for any of the other

1 entities that are pumping within that larger system; is that  
2 correct?

3 MS. WINSTON: Well, I think your question raises two  
4 important points. To briefly answer --

5 THE COURT: Sure.

6 MS. WINSTON: Short answer would be yes.

7 THE COURT: Okay.

8 MS. WINSTON: Long answer is it's complicated.

9 THE COURT: It depends; right?

10 MS. WINSTON: It depends.

11 THE COURT: I'm a lawyer.

12 MS. WINSTON: It depends. So your question raises  
13 two important points. The first is that yes, only certain  
14 parties are -- or petitioners are parties to the 2006 MOA;  
15 however, to get to that MOA there was a lot of research done  
16 and a lot of work with Fish and Wildlife Service. And it's not  
17 necessarily that it's a precedent, but if the Fish and Wildlife  
18 Service approves, which is a federal agency, approve certain  
19 triggering points or, you know, pumping or things like that,  
20 then that can certainly be viewed for that entire area of  
21 pumping.

22 The second issue is, of course we only looked at  
23 pumping in a certain basin because that's how basins have  
24 always been managed.

25 So I think your question does raise an important

1 point because we've relied on this basin by basin management  
2 approach in many different areas that are related to this case,  
3 one of which being the 2006 MOA.

4 In 1309 the State Engineer makes these kind of vague  
5 references to the Endangered Species Act, and I won't harp on  
6 him too much that he references provisions that don't apply to  
7 State agencies, but what's really telling about his references  
8 are that he uses the ESA to sort of have this scare factor.  
9 We're going to be liable under the ESA. Of course, that's a  
10 possibility if there was actual evidence and if a taking was  
11 occurring. We don't have that here.

12 What the State Engineer ignores is that there's  
13 50,000 acre-feet annually that flows into Coyote Springs Basin.

14 And, Mark, I'll ask if you can pull up Order 1169,  
15 page 6.

16 MR. ROBISON: CSI 53 and 54.

17 THE COURT: Slides, okay. Is this from a previous  
18 slide presentation, or is this the new one that --

19 MR. ROBISON: These additional slides to CSI 1.

20 THE COURT: Okay. So and then you'll get us a copy  
21 of that?

22 MR. ROBISON: Absolutely.

23 THE COURT: Okay. Great. Thank you.

24 MS. WINSTON: And this is just Order 1169, Your  
25 Honor.

1           So here the State Engineer is recognizing all of the  
2 inflows and outflows that are related to these basins. We know  
3 that 50,000 acre-feet annually comes into Coyote Springs Valley  
4 Basin. 53,000 flows out, okay. So there's that three -- and  
5 these are approximate numbers. There is about 3- to 5,000 of  
6 recharge from the Sheep Mountain Range.

7           37,000 acre-feet annually flow to the Muddy River  
8 Springs area, but 16- to 17,000 bypasses the Muddy River  
9 Springs area, and that is what the State Engineer recognized in  
10 1169.

11           Now, in Order 1309, the State Engineer says all  
12 pumping throughout the entire Lower White River Flow System  
13 could equally affect the dace. And therefore we need to limit  
14 pumping to avoid liability under the ESA. So it really  
15 addresses the fact that obviously the pump test did not account  
16 for this amount that bypasses the Muddy River Springs area.

17           So the pump test provided an incomplete picture. The  
18 State Engineer's reliance on an incomplete picture and reliance  
19 on the endangered species act really just demonstrate how  
20 arbitrary that 8,000 acre-feet cap is.

21           The Muddy River Decree is the next issue I'm going to  
22 address. The main issue that we have with the discussion of  
23 the Muddy River Decree is that SNWA, and even the State  
24 Engineer attempt to quantify a volume of water that is  
25 appropriated under the Muddy River Decree, and I'm not a

1 hydrologist, but I have practiced this.

2           So the Muddy River Decree assigns a rate or duty of  
3 water to those water users. So a farmer in the upper north  
4 area of the stream might have the right to divert a certain  
5 cubic feet per second of water.

6           What SNWA tries to do is add up all of those assigned  
7 duties or rates and say that that's the volume that's allocated  
8 under the decree. And it gets confusing because when we think  
9 of volume, we're thinking of acre-feet annually. How much  
10 volume of water does Coyote Springs get to pump? We look at  
11 acre-feet annually.

12           The Muddy River Decree doesn't have a volume because  
13 when water is diverted for irrigation on a farm, for example,  
14 not all of that water is going to be used by that farmer.  
15 Diversion rates, which is what the decree uses, can account for  
16 losses and additions to the groundwater table.

17           So to illustrate, if we have that farmer that I  
18 referenced who gets 3.2 cubic feet per second of water to  
19 divert, and the farmer diverts water to his crops, some of that  
20 water is going to be lost due to evaporation. Some of it isn't  
21 going to be used. There's just too much water for what those  
22 crops need. That water is going to go back into the  
23 groundwater table and continue to flow. Then a farm lower or  
24 at a more southern point in the river can capture that water  
25 and divert that water.

1           So when SNWA discusses the water that's allocated or  
2 decreed in terms of volume, it's really inaccurate because that  
3 water that returns to the groundwater table would be counted  
4 twice. So I think that's just an important distinction to  
5 make, that, you know, we can't look at it in terms of a volume  
6 of water, and I think that this Court recognized that early on.  
7 In Mr. Taggart's opening, you asked him, you know, cubic feet  
8 per second is different than volume of water. And I think  
9 that's a very important distinction.

10           During Mr. Taggart's argument this morning, I was  
11 very struck by his comment that we don't need to be parsing out  
12 specific words of statutes. That is what we do. We are  
13 lawyers. I remember in law school my favorite professor told  
14 me he won a \$15 million judgment based on a missing T. The  
15 word was either thereof or hereof, and he won it because there  
16 was no T in front of hereof. We parse out words. We don't get  
17 to say, yeah, there's words in a statute, but the legislature  
18 clearly intended that the State Engineer have the authority to  
19 do this. That's not how statutory interpretation works.

20           I think it's very telling that the State Engineer and  
21 SNWA do not actually want to conduct a statutory interpretation  
22 analysis. Because when you do and when you combine that with  
23 the past practices of the State Engineer and the Nevada Supreme  
24 Court, you find that there is no authority to combine basins.

25           The first place I want to start is NRS 534.030.

1 Mr. Taggart argued this morning that that statute really is  
2 inapplicable. And the truth is Order 1169 doesn't reference  
3 NRS 534.030. I'm going to come back to that.

4 What's important about NRS 534.030 is that it  
5 provides the process, the procedural steps to designate a  
6 basin. And we've gone through the different meanings of  
7 designate and delineate, right.

8 MR. TAGGART: Your Honor, can I just, with all due  
9 respect, is this an answering argument, or is this -- I mean,  
10 she's attacking our positions, not defending the State Engineer  
11 right now. She's --

12 MS. WINSTON: It was my --

13 THE COURT: No. No. But it's -- they are allowed to  
14 in their answering also. Because in their answering brief they  
15 also -- so it would be supporting the State Engineer or, I  
16 don't know how to say this in a nice way, taking pot shots at  
17 everyone else's -- everyone else's openings.

18 MR. TAGGART: But she's talking about joint  
19 management. She's talking about all -- I mean, we support the  
20 State Engineer on that, and now she's challenging what we said  
21 about whether he properly did joint management or not, that  
22 they can reply. They raised that in their opening brief. They  
23 challenge the State Engineer in their opening brief. I  
24 would -- I guess I expected that anybody with the  
25 (indiscernible) argument Muddy River Decree and our position

1 with respect to the Muddy River Decree, because that's what we  
2 raised in our opening brief, and that's what they'd be  
3 answering when it comes to me and my client.

4 THE COURT: So for my -- okay.

5 MR. TAGGART: I mean, I guess I don't mind, but --

6 THE COURT: No, no. But so does --

7 MR. TAGGART: Because they only have four hours.

8 THE COURT: Let me just qualify. So from my  
9 recollection of your answering brief, the majority of the  
10 answering brief had to do with the way that SNWA was  
11 quantifying their water.

12 So if you are talking about the process to -- I don't  
13 remember if that was in the actual answering brief.

14 MS. WINSTON: We did join in the statutory authority  
15 arguments of some of the other petitioners. My understanding  
16 of our time this morning was to address other arguments raised  
17 by other --

18 THE COURT: The opening briefs. Yes.

19 MR. TAGGART: -- intervenors or opening briefs,  
20 especially to give Mr. Taggart that chance to rebut --

21 THE COURT: The opportunity in the reply, yes.

22 MS. WINSTON: -- in his reply.

23 THE COURT: Yes. Yes. That is correct.

24 So that way you will be able to reply to their  
25 criticisms of your -- of the arguments that you brought up in

1 your opening brief. That's what we talked about yesterday.

2 MR. TAGGART: Okay. All right.

3 THE COURT: Okay. Thank you.

4 MS. WINSTON: Thank you, Your Honor.

5 So let's get back to where we were.

6 534.030 provides the process to designate basins or  
7 areas, and I know that there's been discussion about the words  
8 delineate versus designate. And designate is really to -- it  
9 begins with 534.030. That's the process. To look at basins  
10 that do not have adequate perennial yield to meet the needs of  
11 all the permitted water rights users. And what's important  
12 about that statute here is that that is not how 1169 began.

13 And if we'll go to page or just lower on this page,  
14 please. Oh, sorry, page 6 of 1169. That's the ROA 664. The  
15 State Engineer references the statutory authority to conduct  
16 the pump test, the statutory authority to enter 1169, and we  
17 see in Nevada Revised Statute 533.368. So that is where the  
18 pump test began. That is the statute that authorized 1169. It  
19 was not 534.030, which provides the process for designating a  
20 basin for additional or further management.

21 So 534.030 is relevant in the sense that that is not  
22 why we are here today, which I think has been a bit muddied by  
23 the conversation about these areas.

24 What I think is most important is to go to pretty  
25 much any opinion by Justice Pickering. She loves statutory

1 interpretation. We start with the plain language of the  
2 statute. The State Engineer in the answering brief, SNWA, they  
3 really muddied the waters, no pun intended, about what a basin  
4 is, and today Mr. Taggart pulled up a clip from the Water Words  
5 Dictionary.

6 MR. BOLOTIN: Your Honor, respectfully, I think any  
7 reference to the State Engineer's answering brief is definitely  
8 in the reply, Your Honor.

9 THE COURT: Would be in the reply. I would agree.

10 MS. WINSTON: I just -- okay.

11 UNIDENTIFIED SPEAKER: Yeah, I --

12 MR. TAGGART: Your Honor, I don't understand this.  
13 Because I would expect that if they want to address my Muddy  
14 River arguments, then that's what I need to hear now so that  
15 when I come back and reply -- when I come back and reply, all  
16 I'm going to be able to talk about is the Muddy River -- my  
17 Muddy River arguments.

18 THE COURT: The Muddy River arguments.

19 MR. TAGGART: So I just don't understand what we're  
20 doing here. I mean, I guess it doesn't really matter. I mean,  
21 they only have so much time, but it's just odd that we're --  
22 are they going to get up and again and reply and make the same  
23 arguments?

24 THE COURT: No.

25 So I would ask that you stick to what you briefed in

1 the answering brief.

2 MS. WINSTON: Okay, Your Honor. Well, then --

3 MR. ROBISON: Excuse me. You mean the brief in  
4 intervention or the answering brief?

5 THE COURT: The -- I believe it was the answering  
6 brief.

7 MR. ROBISON: Okay. Thank you, Your Honor.

8 MS. WINSTON: Well, okay. So now, sorry. I'm a  
9 little confused. So I should not be addressing anything that  
10 Mr. Taggart --

11 THE COURT: Hold on. Let me just -- let me just  
12 think about this.

13 MS. WINSTON: Okay.

14 THE COURT: So when we were talking yesterday, it was  
15 that the -- I wanted to make sure that all of the entities had  
16 an opportunity to basically have their last word on whatever  
17 else was being criticized by the other entities. So this would  
18 be that opportunity.

19 MS. WINSTON: Well, and that's what -- yesterday  
20 Mr. Taggart said if I hear my name, I want to be able to stand  
21 up and reply to that.

22 THE COURT: Sure. So and I think --

23 MS. WINSTON: So that's why we --

24 MR. TAGGART: Well, wait. I mean, come on. I mean,  
25 this is just twisted. I mean, it's appellate argument. It's

1 not complicated. We raised an issue in our opening brief.  
2 They get to address it in their answering brief. I get to  
3 address it in my reply.

4 THE COURT: Right.

5 MR. TAGGART: The only issue is the Muddy River that  
6 I raised in my opening brief. That's all I raised. I  
7 didn't -- and the State Engineer didn't file an opening brief.  
8 So they couldn't have answered the State Engineer.

9 THE COURT: So, yeah. So anything that has to do  
10 with the State Engineer would have -- would be something that  
11 you would address in the reply.

12 MS. WINSTON: Okay.

13 THE COURT: And truthfully, you know, I have to tell  
14 you I have read so many briefs that I can't even recall who  
15 said what in which brief. But I would -- I would ask that you  
16 limit your argument at this point to any criticisms that you  
17 had regarding -- because this also is the brief in  
18 intervention. So any arguments that you made in that second  
19 portion of your pleadings, which would be whatever you filed  
20 during that time. So I don't know if you need to clarify.

21 MR. ROBISON: We filed opening briefs, and in  
22 November the State filed and the intervenors filed.

23 THE COURT: Yes.

24 MR. ROBISON: We filed intervention briefs.

25 THE COURT: Right.

1 MR. ROBISON: Because we intervened in each other's  
2 cases.

3 THE COURT: Correct.

4 MR. ROBISON: And in addition briefed to the issues  
5 for our brief in intervention.

6 THE COURT: Right.

7 MR. ROBISON: Which is Muddy River, ESA, the  
8 statutory authority, due process, prior appropriation. Then we  
9 all filed our reply briefs on January 11th replying to each  
10 other's arguments.

11 THE COURT: So is your brief in intervention the same  
12 as the answering brief?

13 MR. ROBISON: No. It's separate. It covers some  
14 topics.

15 MS. WINSTON: Ours is the same. We didn't call it an  
16 answering brief. We just called it a brief in intervention.

17 THE COURT: Okay. Just let me just look. Let me be  
18 precise.

19 MR. TAGGART: Well, and in that brief they basically  
20 reargued what they already argued in their opening brief in  
21 some regard. We didn't make a big deal out of it, but, again,  
22 you know, I don't think it's that complicated. The issues that  
23 were raised by people in opening briefs get to be responded to,  
24 and nobody --

25 THE COURT: Okay. Let me find it.

1 MR. DOTSON: Yeah, I don't want to disturb you, Your  
2 Honor, but I thought about this last night. I actually might  
3 be able to help.

4 THE COURT: Okay. Go ahead.

5 MR. DOTSON: Can I?

6 THE COURT: I always welcome --

7 MR. DOTSON: All right. This is Rob Dotson on behalf  
8 of Muddy Valley Irrigation Company.

9 And you'll recall yesterday afternoon -- and I'm  
10 getting old, and so I'm not as sharp in the afternoon -- we  
11 were talking about getting your last shot at somebody.

12 THE COURT: Right.

13 MR. DOTSON: And I think I said something, well, I  
14 think I had nine slides, but I might have to add something.  
15 And then when I actually went to do it, Your Honor, what I  
16 recognize is anything I would say in response to anyone's  
17 opening argument has to be in defense of the State Engineer  
18 because I'm opposing their criticism of the order that I  
19 actually agreed to; right? And so what I figured out in the  
20 end was, well, actually what I said was wrong yesterday.  
21 Because anything -- technically wrong -- because anything I'm  
22 saying today that I've added, and I really didn't add much, is  
23 really in defense of the order.

24 THE COURT: Oh. Well, I mean --

25 MR. DOTSON: Do you see what I'm saying?

1 THE COURT: I do. And I guess, you know, if I --

2 MR. DOTSON: And so it just might help us.

3 THE COURT: So, I mean, I will tell you that in  
4 looking at Vidler and Coyote Springs brief and intervention,  
5 which in our Odyssey is titled answering brief; that's why I  
6 was a little bit confused, a majority of those arguments had to  
7 do with the quantification of the water that SNWA and Moapa  
8 Valley Irrigation Company and how the Moapa Valley Decree. I  
9 mean, to simplify --

10 UNIDENTIFIED SPEAKER: Muddy.

11 THE COURT: Muddy Valley Decree.

12 -- to simplify it is basically -- what they're saying  
13 it says isn't really what it says. It isn't like a full  
14 appropriation because of X, Y, and Z. So I would ask that, you  
15 know, in fairness to all the parties, you know, they are  
16 expecting that you would be arguing what's contained in that  
17 brief in intervention or the answering brief. So I would ask  
18 that you limit your arguments to that.

19 MS. WINSTON: Okay.

20 THE COURT: And then anything else would be in the  
21 reply.

22 MS. WINSTON: Okay.

23 THE COURT: Is that clear?

24 MS. WINSTON: Yes, Your Honor.

25 MR. BOLOTIN: And, Your Honor, the State Engineer is

1 the same, that they don't -- as a petitioner, they get the last  
2 shot at their petition. We're not saying that that's not the  
3 case, but --

4 THE COURT: No. No. But they do that in the reply.

5 MR. BOLOTIN: Yeah. We filed our answering brief the  
6 same time the same they filed their answering brief. It  
7 doesn't make sense to respond to our answering brief in the  
8 answering brief.

9 THE COURT: I agree with you on that.

10 MS. WINSTON: I totally understand, Your Honor. I  
11 honestly was trying to avoid the situation where I saved  
12 everything about Mr. Taggart's argument this morning for reply,  
13 and then he says I don't get a chance to rebut that now. So I  
14 just --

15 THE COURT: Well, you get a chance to rebut it in the  
16 reply.

17 MS. WINSTON: I meant that he doesn't get the chance.  
18 That's all.

19 MR. TAGGART: But the last chance I got to raise all  
20 that stuff I talked about today was today. And, I mean, to be  
21 clear, I think Mr.-- so he raised an issue in his opening brief  
22 that the number is too high, 8,000. Rob Dotson raised an issue  
23 that the number is too high. I have raised the issue. Those  
24 are the issues that were raised in the opening briefs that are  
25 beyond just defending the State Engineer that he chomps it.

1 And they are. And they are. And that's what they should.

2 But on the other stuff, yeah, I won't get another  
3 time to argue about what I said this morning.

4 MR. ROBISON: He just spent an hour 40. He could  
5 have saved some time for reply.

6 MR. TAGGART: Yeah, but I don't need it. That's the  
7 point.

8 THE COURT: Well, what he's saying is, he doesn't  
9 really need it because in the answering or in briefs and  
10 intervention, what was really covered was more about the claim  
11 issue. It was really more about, you know, and Lincoln Vidler  
12 had their own calculation of how it should be calculated, and  
13 Coyote Springs had their own calculation of how it should be  
14 calculated. You know, that issue, and I think that's what he's  
15 relying upon when he made his arguments. So and that's what  
16 was contained in the briefs. So that's what I would ask that  
17 you would limit your argument to.

18 MS. WINSTON: Okay. Well, then I think I'm finished.  
19 I'll pass the torch to Mr. Robison, and I'll see you in the --

20 THE COURT: In the reply.

21 MS. WINSTON: Yes.

22 THE COURT: That sounds good.

23 MS. WINSTON: Thank you, Your Honor.

24 MR. ROBISON: Your Honor, I don't have -- I think I  
25 just heard a order granting in limine argument. We are stuck

1 with the Muddy River Decree and the Endangered Species Act.

2 THE COURT: For this portion.

3 MR. ROBISON: Correct. We mentioned, you know,  
4 statutory authority. We mentioned prior appropriation. Is it  
5 your request that we reserve that for our reply?

6 THE COURT: Yes, please.

7 MR. ROBISON: Thank you, Your Honor.

8 THE COURT: Okay. So is that the sum of Coyote  
9 Springs -- so you're not going to talk about the appropriation  
10 calculation or any of that kind of stuff?

11 MR. ROBISON: Well, that's part of the prior  
12 appropriation. Yes, I'd be happy to argue that right now.

13 THE COURT: Okay. Wait. So let me -- okay. So let  
14 me -- maybe I'm clear as mud. But so in your brief in  
15 intervention, you had criticisms regarding the way that I think  
16 both Southern Nevada Water Authority and Moapa Valley -- Muddy  
17 Valley. Sorry.

18 MR. ROBISON: Too many valleys.

19 THE COURT: Yeah, there is. Muddy Valley had  
20 interpreted the Muddy Valley Decree.

21 MR. ROBISON: Correct.

22 THE COURT: As far as what rights they were entitled  
23 to?

24 MR. ROBISON: Right.

25 THE COURT: And also the way they came with their

1 calculation as far as the volume of water that they were  
2 entitled to that your colleague just talked a little bit about.

3 MR. ROBISON: Right.

4 THE COURT: Is there other argument regarding those  
5 issues that you would like to further expound upon?

6 MR. ROBISON: Just very briefly.

7 THE COURT: Okay.

8 **ARGUMENT FOR COYOTE SPRINGS**

9 MR. ROBISON: And I would like to show CSI Number  
10 2, please.

11 Your Honor, the 1169 analysis talks about the  
12 estimated charge, recharge discharge. And as Ms. Winston  
13 indicated, the quantity of water that bypasses Warm Springs is  
14 around 17,000 acre-feet per year. Not affecting the dace one  
15 way or the other but available for groundwater pumping.

16 The pumping of the water that bypasses Warm Springs,  
17 that's right by Coyote Springs. That does not affect the dace.  
18 But the science is that there's additional water coming off of  
19 the sheep range, and that's in the evidence by our expert and  
20 that the fault, we call the highway fault, that water that  
21 comes off the sheep range goes south. So there's additional  
22 water to be used that has no effect whatsoever on the Moapa  
23 dace. And there's no test that substantiates that the pumping  
24 from the water that flows to the southern border of the Coyote  
25 Springs Valley will in any way affect the habitat of the dace,

1 and we think that that analysis then is skewed to blend those  
2 things even though 1169 says they are distinctly different, and  
3 that's what I have to add to that argument, Your Honor.

4 THE COURT: Okay. Thank you. All right.

5 So next I think is --

6 UNIDENTIFIED SPEAKER: Apex I think is up next.

7 THE COURT: Is it Apex?

8 UNIDENTIFIED SPEAKER: Yeah, I think so.

9 MR. BALDUCCI: Your Honor, on behalf of Apex and Dry  
10 Lake, we have nothing to add during this portion of the  
11 proceeding although we will reserve all of our time, although I  
12 don't anticipate needing every second of it, for the reply  
13 portion of argument.

14 THE COURT: Okay. Thank you. Let's see. So let me  
15 just get my list.

16 MR. ROBISON: Center.

17 THE COURT: Center for Biological Diversity?

18 MR. LAKE: Yes, Your Honor. We have an answering  
19 presentation.

20 THE COURT: Okay. Do you need a minute to set up?

21 MR. LAKE: I don't. I don't have a presentation for  
22 this.

23 THE COURT: Okay.

24 MR. LAKE: So we're just going to keep it simple this  
25 time.

1                   **ARGUMENT FOR CENTER FOR BIOLOGICAL DIVERSITY**

2           MR. LAKE: And like Mr. Morrison, I was sitting over  
3 there crossing things off as the other parties are talking.

4           I intended to talk about three things today. One is  
5 the Endangered Species Act. The other one was Kane Springs  
6 Valley, and finally the State Engineer statutory authority.

7           I think we've covered the latter two ad nauseam at  
8 this point. I'm happy to talk about them. We briefed them.

9           THE COURT: If you want to highlight, certainly I  
10 don't want to preclude you, but if you feel like it's been  
11 adequately covered by Mr. Taggart, I'll leave that to your  
12 discretion.

13          MR. LAKE: Thank you. And if the Court has any  
14 questions, please ask.

15          With that in mind, I'd like to focus today on the  
16 Endangered Species Act. There's been a lot of discussion about  
17 this, and I think, you know, one of the really important parts  
18 of this case is to understand the interaction between  
19 groundwater pumping and the Endangered Species Act, both in  
20 terms of the impact on the dace and in terms of potential  
21 liability for the State Engineer.

22          And I'd actually like to step back a moment and talk  
23 about, you know, why we're here in the first place. Why am I  
24 here at all talking about the Endangered Species Act? And it's  
25 because they -- you know, we have this groundwater system, this

1 regional groundwater system, and there are maps of it all over  
2 the courtroom now. There are thousands, tens of thousands of  
3 acre-feet of water rights already awarded in the system. And  
4 the reason we're all here in court fighting about it is because  
5 there are limits on it, and we have to figure out how to deal  
6 with those limits.

7           One of those limits is, as Mr. Dotson was talking  
8 about, the Muddy River Decree, and we have these water -- we're  
9 in Nevada. It's a prior appropriation state. Water rights are  
10 first in time, first in right. And if there's an impact on  
11 those water rights, it has to be dealt with, and that's spelled  
12 out in the statutes. That's in NRS 533.0245. It's also -- it  
13 flows from the idea that all of the rights granted are subject  
14 to existing rights. So that's one limit on the system. We've  
15 talked about it a lot.

16           Now, the other limit on the system is the Endangered  
17 Species Act. And again, this is not inconsistent with the  
18 State Engineer's duties. It's not outside the State Engineer's  
19 duties. I think Mr. Taggart did a very good job of explaining  
20 why the idea that the State Engineer has to provide for the  
21 public interest survives the initial granting of the  
22 application.

23           And this is part of the public interest.

24           The State Engineer is acting as a trustee of the  
25 State's water resources. The State Engineer doesn't own the

1 water in the State. The individual appropriators don't own the  
2 water. The water belongs to the public, and the State Engineer  
3 has an ongoing duty to provide for the public interest in the  
4 administration of those water rights.

5 And this has two primary implications here. And one  
6 is that, as Mr. Taggart pointed out, the dace, looking at, you  
7 know, providing for the dace and its conservation is in the  
8 public's interest. I mean, that public interest has been  
9 articulated in the Endangered Species Act itself. It's  
10 articulated at the State level with Nevada State protections  
11 for endangered species, the work The Nevada Department of  
12 Wildlife has done. The (indiscernible) has already and  
13 continues to do.

14 And we also have the potential for liability. So I'd  
15 like to talk about both of those things kind of in concert, but  
16 I'd really first like to give the Court a roadmap of how the  
17 ESA works and how it comes into play in this situation.

18 And I'd like to start by reading some testimony that  
19 was before the State Engineer. Because I think there's this  
20 idea that is -- the State Engineer's conclusion that there's  
21 potential liability here sort of came out of nowhere, but it  
22 didn't. This is an ongoing issue. As Mr. Taggart also  
23 mentioned, the Fish and Wildlife Service protested applications  
24 in Coyote Springs Valley all the way back in the 1980s. Even  
25 back then they were talking about looking at the system and

1 realizing that if you pump water in Coyote Springs Valley, and  
2 at that point we didn't know the full extent of the system, but  
3 at least if you pump water here, it's going to affect Springs  
4 (video interference).

5 So, you know, this plays out over a few decades, and  
6 you get to the Order 1303 hearing. And Fish and Wildlife  
7 Service participated in the Order 1303 hearing. And a lot has  
8 been said about their testimony, and I'm going to read some of  
9 that testimony right now. I'm reading from record on appeal  
10 53,117. This is the testimony of Dr. Schwemm from the Fish and  
11 Wildlife Service.

12 Dr. Schwemm is not a regulatory officer. He's  
13 actually the head of aquatic biology for the Las Vegas office,  
14 which means he's responsible for the analysis that goes into  
15 things, like a biological opinion.

16 THE COURT: Can you spell his name for me.

17 MR. LAKE: Sure. Let me make sure I get this right.  
18 So, S-c-h-w-e-m-m.

19 So the Fish and Wildlife Service makes a conclusion  
20 to say that a species deserves to be on the endangered species  
21 list or that some action is going to jeopardize the existence  
22 of a certain species, but that's the kind of analysis that  
23 Dr. Schwemm conducts. And this is his testimony from the Order  
24 1303 hearing.

25 The examiner is Patrick Donnelly (phonetic), the

1 Center for Biological Diversity's Great Basin Director.

2 Okay. The question is, Dr. Schwemm, are you -- you  
3 state that flow and habitat are proportional to the Muddy  
4 River -- to the Muddy River Spring area; is that correct?

5 Answer: Yes.

6 Question: And that any reduction of flow will  
7 decrease the amount of habitat available?

8 Answer: Yes.

9 Question: In the general sense then --

10 And I guess he passed on that question. Sorry. I  
11 got lost here. I think I skipped one.

12 Question: Would a reduction in habitat reduce the  
13 number of individual dace present?

14 Answer: Yes.

15 So Dr. Schwemm admits there that pumping -- and then  
16 this is testimony that was before the State Engineer, something  
17 the State Engineer took into account, pumping from the  
18 carbonate aquifer reduces spring flow and thus reduces the  
19 amount of dace present. And I did cover this earlier.

20 Continuing, since this is true, does this imply that  
21 carbonate pumping would result in the reduction of the amount  
22 of individuals of the Moapa dace.

23 The respondent now is Sue Braumiller. She's the Fish  
24 and Wildlife Services Chief Hydrologist in Nevada. I would say  
25 that's highly likely, is her response.

1 THE COURT: We're on the record on appeal with this.

2 MR. LAKE: This is the following -- this is 53,117  
3 and going on to 53,118.

4 Now, it's been pointed out, and it's true that Fish  
5 and Wildlife Service never said we needed to stop all pumping.  
6 And I'd like to clarify that the Center's position has never  
7 been no pumping.

8 Our position has been that any groundwater pumping,  
9 and I think this is shared by several parties to this, any  
10 groundwater pumping reduces carbonate water levels and spring  
11 flows.

12 Our expert recommended that some amount of alluvial  
13 pumping could occur, and this is essentially due to the  
14 differences between the alluvial and the carbonate aquifer,  
15 that I don't think I need to get into here, but, you know, I  
16 think the important point here is that what we were offering  
17 below is a technical analysis of just what would happen if you  
18 pump, and it was a fact-finding exercise.

19 We do think 8,000 is too high, and the record shows  
20 that we're still seeing decreasing spring flows with 8,000, but  
21 I'm not going to stand up here and say that any and all pumping  
22 anywhere in the system results in take. You know, the fact is  
23 though that we have thousands of acre-feet of pumping occurring  
24 and continue to have thousands of acre-feet of pumping  
25 occurring if something isn't done. And that will in fact cause

1 take.

2 So what is take? Take comes from Section 9 of the  
3 ESA, and it comes from the definition of basically three terms,  
4 and I covered these on Monday. I was going to briefly come  
5 back to them now so our memory is all refreshed.

6 Section 9 is pretty short and simple. It says,

7 Any person is prohibited from taking any  
8 endangered species within the United States or  
9 the territory of the United States. It is also  
10 unlawful for any person to attempt to commit,  
11 solicit, cause to be committed any offense  
12 defined as take.

13 So it's a pretty inclusive definition there.

14 Take means to harass, harm, pursue, hunt,  
15 shoot, kill, trap, capture, collect or attempt  
16 to engage in any such conduct.

17 This is an intentionally broad definition as well.

18 The Senate report accompanying the final draft of the ESA said,

19 It's defined in the broadest possible  
20 manner -- I'm quoting now -- to include every  
21 conceivable way in which a person can, quote,  
22 "take," end quote, or attempt to, quote, "take,"  
23 end quote, any fish or wildlife.

24 And this was also acknowledged by the U.S. Supreme  
25 Court in the decision of *Babbitt versus Sweet Home Chapter of*

1 *Communities*, 515 U.S. 687.

2           In addition, we also have the definition of harm.  
3 This relates to habitat modification. So harm includes habitat  
4 modification to the extent that it actually kills or injures  
5 wildlife. So when you look at Dr. Schwemm's testimony, he's  
6 basically saying that yes, you will have habitat modification  
7 that actually kills or injures the Moapa dace, and that would  
8 qualify as take.

9           And finally, we'll get to person, and I think this is  
10 really important here because we're -- you know, Coyote Springs  
11 and other parties have been talking about, you know, who is and  
12 who is not liable under the ESA for various reasons.

13           Person is also defined extremely broadly, and I'm  
14 going to go through the cases in a minute, but if you look at  
15 this definition and you look at how it's been litigated, it  
16 becomes pretty obvious that the party most who generally gets  
17 dragged into court over this stuff is the State. And that just  
18 reflects the reasonableness of the State Engineer's  
19 consideration in this case.

20           So person is defined as,

21                   An individual, corporation, partnership,  
22                   trust, association, any other private entity or  
23                   any officer, employee, agent, department or  
24                   instrumentality of the federal government of any  
25                   state, municipality or political subdivision of

1 the state or of any foreign government of any  
2 state, municipality or political subdivision of  
3 the state and any entity subject to the  
4 jurisdiction of the United States.

5 So anyone we can legally call a person can  
6 essentially be liable for take is what they're saying here. So  
7 this is the mechanism for take, and Mr. Taggart mentioned the  
8 *Strahan* case. I'd like to discuss the *Strahan* case a little  
9 bit more. Some have pointed out that it's not strictly  
10 analogous because it involves lobster fishing and not water  
11 rights. I will get to that in a second. There are cases that  
12 involve water rights.

13 But *Strahan* I think, the reason it's been cited so  
14 much is it's just the clearest discussion and clearest  
15 articulation of the nature of the State's liability under the  
16 Endangered Species Act. And the holding of that case was that  
17 a governmental third-party pursuant to whose authority and act  
18 or directly exacts a taking is deemed to have violated the take  
19 provisions of the ESA. And this is under a proximate cause  
20 standard.

21 So what they said in *Strahan* was that licensing  
22 natural resource extraction, quote, specifically in a manner  
23 that is likely to result in a violation of federal law, end  
24 quote, is generally understood to constitute proximate cause.  
25 It's within that sphere of foreseeability.

1           And to put a little meat on those bones, it's like  
2 here we have all of this science showing that pumping from the  
3 aquifer is going to cause drawdown to the Springs. So it's  
4 foreseeable that you're going to have a habitat reduction if  
5 you pump to a certain level. And in most cases, Courts have  
6 found that where the State is issuing a license to foreign  
7 activity that impacts the habitat, that is within the zone of  
8 foreseeable injury that we generally understood to be proximate  
9 cause.

10           And so I'd like to now address some of the arguments  
11 that were made in *Strahan* by the government, by the State  
12 government because they really mirror some of the arguments  
13 being made in this case.

14           First, the State argued that they couldn't be liable  
15 for a take because they're not doing any take. It's the third  
16 parties. It's the lobster fishermen. You know, they tried to  
17 suggest that, you know, we're not telling them to use this gear  
18 in this way. We're just allowing it. It's their choice, and  
19 it's their conduct. You know, there's an intervening causal  
20 factor there. Well, the Court said no.

21           Even though strictly speaking the third-party  
22 fishermen, licensed by the Department, were causing the take of  
23 whales, you know, this was foreseeable. Like the -- the State  
24 just can't, and this is going to come up a lot, the State just  
25 can't just stick its head in the sand and say, you know, see no

1 evil. It has to take into account, and the Court will take  
2 into account the reasonably foreseeable consequences of issuing  
3 the permit.

4 Also, this idea, and I really want to discuss this  
5 today because I think this has been a huge source of confusion  
6 in this case, the idea that the State was somehow being  
7 co-opted to enforce the ESA. And the argument was made in  
8 *Strahan* that that's what was happening. Like they said, you  
9 know, First Circuit, if you decide in favor of the plaintiff  
10 here, then we will be forced to use our state regulatory  
11 apparatus to enforce the ESA.

12 And it's a little different here. Here it's being  
13 alleged that the State Engineer went ahead and took that step  
14 himself.

15 But what the First Circuit explained in *Strahan* was,  
16 well, that's not really what's happening here. There's a  
17 difference between acknowledging a legal requirement and  
18 enforcing it.

19 So I'd like to stick on this for a minute because  
20 there's been a lot of verbiage thrown around about the ESA  
21 using terms like jurisdiction and authority. And I don't think  
22 that's appropriate at all here. That's not what's happening.  
23 That's not what the State Engineer did here. The State  
24 Engineer read the law and understood what it meant.

25 And, you know, the argument that we should simply be

1 blind to this is kind of like saying, and I've been searching  
2 for an analogy for this all week, but it's kind of like saying  
3 that, you know, the speed limit doesn't exist until you get  
4 pulled over. It's like a motorist saying, okay, I don't think  
5 anybody can prove that I'm going over 65. So I'm going to go  
6 80. Or if a motorist says, you know, sees the speed limit sign  
7 and goes 65 because that's what the speed limit says, you know,  
8 does that somehow constitute enforcement on the motorist's  
9 part, or is it just prudent behavior.

10           You know, the same thing, to use maybe a more extreme  
11 analogy, are you enforcing the criminal law by refraining from  
12 murdering somebody? It's just a different kind of situation.

13           The State Engineer is entitled to recognize a  
14 potential liability of the State, which exists whether or not  
15 he chooses to acknowledge it or not.

16           So not only would this be contrary to law, but it's  
17 also contrary to the public interest. It's not in the State's  
18 interest at all and not in the interests of the people in  
19 Nevada for the State Engineer to be issuing permits to  
20 appropriate the people's water such that the State is getting  
21 sued left and right by people like me.

22           And this is borne out in the case law involving water  
23 diversion. I'm going to mention a few of these cases. I don't  
24 think we have to spend a lot of time on it. The *Cappaert* case  
25 has already been mentioned, and I think that is a very

1 instructive case in this instance. It's not directly  
2 analogous, but what the U.S. Supreme Court did recognize there  
3 is that when it comes to the management of endangered species  
4 there is a higher authority here, and again, that authority  
5 will intervene whether or not the State chooses to acknowledge  
6 it.

7           And as the former State Engineers testified at the  
8 hearing, that is probably not a desirable result for the State  
9 Engineer or the Department of Conservation of Natural  
10 Resources.

11           So the first case I'm going to talk about is *U.S. v.*  
12 *Glenn-Colusa Water District*. And the cite for that is 788 F.  
13 Supp. 1126. It's from the Eastern District of California. And  
14 this is an action, this is sort of a illustration of what could  
15 happen because in that case the United States brought an action  
16 for take against the operator of river diversion that was  
17 killing endangered fish.

18           And, you know, there was an argument made there that  
19 this is a State matter. You know, this is a matter of State  
20 water regulation, and the Court said no. You know, this --  
21 this is -- the State's water regulation scheme does not somehow  
22 override or nullify the legal mechanism in the ESA.

23           In another case now, *Natural Resources Defense*  
24 *Council versus Zinke*, again in the Eastern District of  
25 California from 2018, the cite for that one is 347 F. Supp. 3d

1 465. And this just found that water supply contracts could be  
2 the basis for Section 9 liability, that again issuing --  
3 issuing or approving a contract that allows a certain amount of  
4 water to be diverted for development from a river harboring  
5 endangered fish was within that zone of foreseeability that  
6 we're talking about proximate cause.

7           Similarly, the *Coalition for a Sustainable Delta*  
8 *versus McCamman*, 725 F. Supp. 2d 1162, similar result, finding  
9 that take may include the acts of a third party indirectly  
10 bringing about that take. Again in the context of water  
11 diversions. And I could go on, but I think I've made my point.  
12 There are several other cases here that basically say the same  
13 thing.

14           I would like to talk about the *Aransas Project* case  
15 that Lincoln and Vidler cited in their briefs. This is a Fifth  
16 Circuit decision. I'd just like to note at the outset that the  
17 Fifth Circuit tends to take a different view of these issues  
18 than the Ninth, and I think it would be risky to look at the  
19 Fifth Circuit precedent here given the difference between the  
20 circuits and the fact that the Ninth Circuit is the controlling  
21 jurisdiction.

22           But I think the more important point there is that,  
23 you know, this wasn't a case about take liability or the nature  
24 of take liability or the existence of it, I guess. This was a  
25 case about proximate cause. Everything I just talked about was

1 acknowledged in that case. But the Court was discussing, well,  
2 have the plaintiffs met their burden to show proximate cause  
3 here, and they hadn't.

4 But if you look at the facts of the case, this was a  
5 far more attenuated chain of causation than we're dealing with  
6 here. In that case plaintiffs allege that water withdrawals  
7 would raise the salinity of certain water sources. So there's  
8 like an estuary in the Texas coastline, which would change the  
9 availability of certain food sources for a bird species that  
10 uses this habitat, and the bird species was the one that was  
11 endangered. So, you know, changing the chemical composition of  
12 the water, affecting food sources, affecting the bird's  
13 behavior, leading all the way to actually killing or injuring  
14 wildlife.

15 And I think what the Court said was only a fortuitous  
16 consequence -- confluence of adverse factors could impact  
17 whooping cranes in that case. And this is not what we're  
18 dealing with here. In fact, this is one of the things that I  
19 think was pretty squarely resolved in the Order 1303 hearing.  
20 You know, what is this chain of causation? And it is clear  
21 pumping reduces groundwater levels. Spring flows depend on  
22 groundwater levels. Therefore pumping reduces spring flows.  
23 Reductions in spring flows, as both myself and Mr. Taggart have  
24 discussed here, lead to losses of habitat.

25 And now I'd like to turn to the MOA, and the MOA is

1 also something that we've discussed a lot. I kind of touched  
2 on earlier what the MOA does and doesn't do and what the  
3 biological opinion does and doesn't do.

4 And the short answer here is that the MOA does  
5 absolutely nothing. The MOA is a private agreement. The MOA  
6 is not regulatory. The MOA is not a liability shield for  
7 anybody. It simply recites the agreement between the parties  
8 that they were going to do various things in anticipation of  
9 the Order 1169 pump test. And there were conservation measures  
10 there that some of which were very beneficial to the dace.  
11 Nevertheless, it's not what you need to do to avoid Section 9  
12 liability. That comes through a different process, and that  
13 process is called formal consultation, which results in the  
14 preparation of biological opinion, which was done there, but  
15 it's limited, as I'm about to describe.

16 So this is going to get a little bit wonky, and I'm  
17 happy to clarify at any point.

18 But we need to draw a distinction between take under  
19 Section 9 of the ESA and jeopardy under Section 7 of the ESA.  
20 Because when you're talking about biological opinion, it's  
21 about jeopardy under Section 7 and not take under Section 9.  
22 And there is an interaction between the two, but it is -- I  
23 would say it's very fact dependent and limited to the facts of  
24 the particular case.

25 So Section 7 -- Section 7, A2 specifically, and the

1 cite for this is 16 USC § 1536(a) (2).

2 THE COURT: Can you say that one more time.

3 MR. LAKE: Yeah. 16 United States Code § 1536(a) (2).

4 THE COURT: Which is Section 7?

5 MR. LAKE: At Section 7. 1536 at Section 7, and this  
6 is a subpart of Section 7. This requires each federal agency.  
7 So right there you have a distinction. Take applies to  
8 everybody. Section 7 applies to the federal government, and it  
9 says, Every federal agency has to ensure that any action it  
10 takes or funds, authorizes, carries out is not likely to  
11 jeopardize the continued existence of any threatened or  
12 endangered species.

13 Now, notice that that doesn't use the same language  
14 as take. This is a broader, more general inquiry. Are we  
15 imperiling the conservation and recovery of this species, not  
16 are we going to kill individuals.

17 And so the Fish and Wildlife Service to implement  
18 this provision goes through a process called consultation where  
19 the federal agency that's doing the action, and I think it  
20 might be helpful to talk about this in some concrete context.  
21 So I'll use the context of a subdivision because I think that's  
22 going to be pretty familiar here in Vegas.

23 Say BLM wants to privatize a certain tract of land to  
24 build a subdivision. Well, BLM is taking an action there.  
25 It's a federal action. Say there's an endangered species on

1 that land that uses that land. Well, BLM at this point is  
2 going to have to enter into the consultation process to ensure  
3 that the land transfer doesn't impact, doesn't adversely affect  
4 the endangered species. So the Fish and Wildlife Service looks  
5 at the proposal and comes to a conclusion about the impact of  
6 the action. Where an action may affect a listed species, it  
7 triggers a process called formal consultation.

8           Formal consultation is basically a process of study  
9 that results in a biological opinion. The biological opinion  
10 is prepared by the U.S. Fish and Wildlife Service, and that's  
11 the summary of the findings that the Fish and Wildlife Service  
12 made during the study. So they're going to look at all of the  
13 environmental consequences of this and decide whether it's  
14 going to imperil the species or not.

15           And so at the end of that, it's going to -- the Fish  
16 and Wildlife Service is going to transmit the biological  
17 opinion to the action agency. So this would be Fish and  
18 Wildlife Service transmitting to BLM and giving their opinion  
19 on whether this is compliant with the ESA or not essentially.

20           Now, if the Fish and Wildlife Service makes a finding  
21 in that biological opinion that the action is not going to,  
22 like not going to jeopardize, and the technical finding that  
23 they will make is, you know, it could be likely to adversely  
24 affect, but it won't jeopardize the continued existence of the  
25 species.

1           Now, there's kind of a gap there; right? Like  
2 they're there allowing for some impacts if they make that  
3 finding, which leads to the question, well, what are we  
4 supposed to do, Fish and Wildlife Service, because there's --  
5 you know, we're liable for take. Everybody is liable for take.  
6 You know you kill one member of the species, and it's take.

7           So what Fish and Wildlife Service does in that  
8 context is they'll issue something called an incidental take  
9 statement. And this, this is the only thing that shields a  
10 party from take liability is the incidental take statement.  
11 The incidental take statement specifies how much take is  
12 allowed, and this can either be in terms of individuals. So it  
13 can say you can take X number of individuals of the species.  
14 After that it's exceeded. After that, no more liability  
15 shield.

16           Or it can be -- and the ones in the record here, and  
17 there are a few in the record here, are phrased in terms of  
18 habitat affected, and specifically spring close. So the  
19 incidental take statements in the record here and a lot of  
20 incidental take statements actually say you can take up to --  
21 you know, here it's a certain level of spring flow, like  
22 Lincoln-Vidler's incidental take statement for their Kane  
23 Springs project, for example, goes down to 3.0 CFS at Warm  
24 Springs West. So what that says is once -- if you reach 3.2  
25 CFS at Warm Springs West, there is -- that is the full extent

1 of take protection that's given to Lincoln-Vidler through that  
2 process. Take occurs below that flow level, unpermitted take.  
3 An unpermitted take is the thing that leads to liability.

4           So as I mentioned, there was a biological opinion  
5 attached to the MOA. So Fish and Wildlife Service as a  
6 signatory to the MOA did go through this consultation process,  
7 and full disclosure, my organization litigated that  
8 consultation process. And there was a decision, and it was a  
9 federal court decision on that where we lost. And I think the  
10 reason that we lost that case is especially relevant here  
11 because it really lays out the boundaries of what the MOA does  
12 and doesn't do, and we actually went to court thinking that it  
13 does a lot more than the Court said it did.

14           So the MOA, and this is a quote from the MOA record  
15 on appeal 47,146, evaluates as the proposed action the  
16 execution of the MOA by the Fish and Wildlife Service, not  
17 groundwater pumping, the execution of the MOA, and the MOA has  
18 three parts. There's the dedication of water rights. There's  
19 the habitat restoration measures, and there's those spring flow  
20 triggers at Warm Springs West. That's what it's looking at.

21           It specifically states that it's programmatic. It's  
22 considering the big picture, does not consider future  
23 site-specific actions. So pumping from any particular well is  
24 not analyzed in the biological opinion. Groundwater pumping in  
25 general, I mean, there's an analysis of what groundwater

1 pumping could do to spring flows, and it's basically the same  
2 analysis that we've seen throughout this case. It's this close  
3 connection acknowledging that groundwater pumping is going to  
4 reduce the spring flows at Warm Springs West.

5 But because they are analyzing the MOA and not the  
6 pumping, the Fish and Wildlife Service didn't issue an  
7 incidental take statement here. There's no incidental take  
8 statement attached to the MOA. The Fish and Wildlife Service  
9 said, well, signing the MOA isn't going to cause any take. So  
10 we don't need to issue an incidental take statement.

11 We have analysis in the MOA that we can, quote, tier  
12 to that may support an incidental take statement for a future  
13 project. But the MOA itself doesn't -- it doesn't protect  
14 against take at all. Nothing out of this process protects  
15 against take.

16 What does protect against take are the tiered BiOps,  
17 and as far as I can tell, there are three of them in the  
18 record. One of them is to CSI for the withdrawal of 4,600  
19 acre-feet from two locations in Coyote Springs Valley. The  
20 incidental take limit on that statement is 2.7 CF -- or 2.78  
21 CFS at Warm Springs West.

22 There's another one to Southern Nevada Water  
23 Authority, also with the same incidental take limit. And as I  
24 mentioned, Lincoln Vidler has received an incidental take  
25 statement for the withdrawal of a thousand acre-feet from Kane

1 Springs Valley. And the take limit on that is 3.0 CFS at Warm  
2 Springs West.

3 This means that the vast majority of the water users  
4 in the Lower White River Flow System and the State Engineer  
5 himself lack any protection against take liability. And the  
6 parties that I mentioned have protection only insofar as they  
7 conduct these specific actions. So we're talking about, you  
8 know, specific water withdrawals within the system.

9 THE COURT: Of that particular entity.

10 MR. LAKE: Yeah. One or two wells. I mean, Coyote  
11 Springs Valley is two wells. Lincoln Vidler is one well.

12 Any expansion on that is going to require more  
13 consultation.

14 And you have all of these -- you have 40,000 -- this  
15 adds up to -- I'm going to try to do math again. So I'm sorry.  
16 You know, this is about a little under 10,000 acre-feet I think  
17 in total. I could be wrong about that, but my point is that  
18 it's less than 40,000, and that's the amount of rights that are  
19 out there. So the idea that take could occur is not remote  
20 here, and the State Engineer was correct to realize that.

21 We've talked about hydrology quite a bit, but I would  
22 just like to reiterate and remind the Court about the testimony  
23 that I read off from Fish and Wildlife Service that, you know,  
24 this is well established in the record. And what certain  
25 parties are asking here is that the State Engineer just bury

1 his head in the sand, and an argument has been made even that,  
2 well, there's no evidence for take in the record, but that's a  
3 different -- I mean, there is evidence for take in the record.  
4 But that's really a different question.

5           What's being addressed in the briefing I think is the  
6 question of proving liability for take. I mean, this is the  
7 standard that comes into play when you go to federal court, and  
8 you say, you know, this person has taken an endangered species,  
9 and this is the burden you have to meet to prove that in that  
10 specific case. It's a different question from whether there is  
11 potential liability. It's like, you know, we said earlier  
12 there's a difference between showing that death occurred and  
13 then somebody committed murder, and I think we've shown that a  
14 death can occur here, you know, quite easily.

15           And then some people are running in here and saying,  
16 well, we should completely disregard that because no one has  
17 proven that, you know, no one has been convicted of murder yet.  
18 We don't need somebody to be convicted of murder for this to be  
19 acknowledged. The State Engineer, you know, does not need to  
20 be sued for take in order to realize the impacts on this fish.

21           I'd also like to talk about briefly the public trust  
22 doctrine and how that plays into this.

23           The State Engineer has an ongoing duty to consider  
24 the public trust because water rights are, and this is provided  
25 in the statute. This is NRS 533.025, all underground waters

1 both in the boundaries of the State belong to the public. They  
2 are also subject to all existing rights. I think this statute  
3 really encapsulates the two immovable obstacles that we  
4 encounter in this case that require the reduction of pumping.  
5 Public ownership and the existing rights.

6 The ESA issue, of course, relates to public  
7 ownership, and Mr. Taggart has discussed the Mineral County  
8 case. And I'm not going to go back into the statutes --

9 THE COURT: You're talking about the most recent one?

10 MR. LAKE: The most recent one, right, and this is  
11 where the Nevada Supreme Court said the public trust doctrine  
12 applies. What the Nevada Supreme Court also said in that case  
13 is that the public trust, like the State and Nevada water  
14 statutes are consistent with the public trust doctrine. So  
15 they looked at the statutes, and they said, you know, the State  
16 Engineer already has an obligation to look at the public  
17 interest. Therefore we don't need to graft on, at least in  
18 those circumstances, they did not need to graft on any  
19 additional common law requirements. They said the statutes  
20 already provide for the public interest.

21 And if we were to take the very narrow analysis that  
22 some parties are urging here, looking at each statute  
23 individually as if it doesn't relate to the other statutes,  
24 then that decision doesn't make any sense. We've talked a lot  
25 about how science is evolving, and that was something that did

1 come up in the Walker Lake case too.

2 Science is evolving, and if -- just like a conflict  
3 with existing rights, if a particular appropriation turns out  
4 not to be in the public interest later on down the road, well,  
5 that kind of implies that -- and the State Engineer can't do  
6 anything about it. So if that's the case, that implies that  
7 there really isn't adequate protection for the public trust  
8 doctrine in Nevada water statutes. And you can see that very  
9 starkly in this case.

10 If the State Engineer is powerless to address the  
11 overappropriation we're seeing here, I mean, you're cutting off  
12 the supply of water to the dace. You're also cutting off the  
13 supply of water to the only communities, the only businesses  
14 that depend on Lower White River Flow System water, you know,  
15 the communities in the Moapa Valley, the farms in the Moapa  
16 Valley, the water rights holders under the Muddy River Decree.  
17 That's what happens if the State Engineer can't manage the  
18 system.

19 You know, putting aside all of the technical  
20 discussion about how exactly this is accomplished, this is  
21 something that, you know, if the public interest means anything  
22 in Nevada, if the public trust means anything in Nevada, this  
23 is something that needs to be safeguarded.

24 I would like to briefly address something that came  
25 up in the last argument. Counsel for Coyote Springs mentioned

1 that there is an amount of water that doesn't affect the dace.  
2 That evidence was presented to the State Engineer. That  
3 evidence is based on geologic studies and an analysis of  
4 basically precipitation induced recharge in the sheep range.  
5 This is basically somebody trying to decide of all the rain  
6 that falls in the sheep range, how much of it infiltrates and  
7 actually gets into the carbon aquifer.

8 I'm not going to go into the details of that, I'll  
9 just note that several parties raised substantial concerns with  
10 the methodology employed in that analysis, both the geologic  
11 study and the implications drawn from it and the precipitation  
12 study. You know, to put it in greatly simplified terms, and  
13 I'm sure --

14 THE COURT: Oh, no, simplify it.

15 MR. LAKE: Well, if Dr. Myers were here, he'd  
16 probably yell at me, but the precipitation map just didn't  
17 apply to the situation that they were using it for. So this  
18 precipitation map has to be used with one particular kind of an  
19 analysis on one particular scale, and that wasn't done here.  
20 And several hydrologists testified at the hearing that if you  
21 don't, you know, if you don't match up this precipitation map  
22 with these other methodologies, it's useless.

23 There was also questioning of like if there's a fault  
24 at a particular location, that doesn't show a boundary. There  
25 are faults all over the place in the Lower White River Flow

1 System. Some of them, like the Pahrnagat shear zone that  
2 Mr. Taggart mentioned, are boundaries. Others, like the faults  
3 at the mouth of Kane Springs Valley aren't. Water flows  
4 through them. Water can flow. You know, you see impacts on  
5 either side. I think that's the real test here.

6           Yeah, there's faults, but, you know, the issue is,  
7 like if you pump at a well at Location A, and Location B is on  
8 the other side of the fault, are you seeing an impact from that  
9 pumping? Are you seeing a response? And you did. You saw  
10 responses throughout Coyote Springs Valley. And that was used  
11 to refute the analysis that there's some amount of water that's  
12 bypassing the Springs and doesn't affect the dace. The State  
13 Engineer took that into account. It's within his bailiwick of  
14 technical expertise, and that should not be disturbed.

15           And I believe that is all I have.

16           My next topic is Kane Springs Valley. I feel like  
17 that's been covered, as they said, ad nauseam. I'll address a  
18 few points. This is also briefed. So I don't think I need to  
19 go into it into much detail.

20           First I'd like to address this issue of the hydraulic  
21 gradient or the hydraulic head.

22           Oh, sorry, I missed something. I'm going to kind of  
23 backtrack. I'm sorry.

24           THE COURT: That's okay.

25           MR. LAKE: With the -- with some amount of water

1 bypassing, I think it's important to recognize that what we  
2 also saw with the pumping test is this idea that pumping lowers  
3 the water level, and that's the important part. I mean, that's  
4 important because for various reasons, and again our  
5 hydrologists would shout at me for simplifying this much, but  
6 it's the level that matters, not where water may be flowing at  
7 any particular location. So it's basically the bucket analogy  
8 again.

9           If you look at the Lower White River Flow System like  
10 a bucket, and I'll admit it's not a bucket, but it has some  
11 things in common with a bucket, and one of those things is that  
12 you have a spout, that spout is the Muddy River Springs, and if  
13 the Lower White River Flow System is a bucket, and the Springs  
14 are a spout, the spout's at the top. At least the Pederson  
15 Springs and then the Springs that are especially important to  
16 the Moapa dace are at the top.

17           So water might be swirling around in the bucket in  
18 various ways, but the important part is when is water going to  
19 stop flowing out of the spout. And you could pump -- I mean,  
20 there might be -- and this is a 50,000 acre-foot bucket. But  
21 like we saw in the pumping test, like you don't have to pump  
22 that amount of acre-feet to make the spout go dry. You just  
23 have to make the water level decrease so much that it's below  
24 the spout. And, you know, we know that that's -- I mean, from  
25 the data now, we know that that's less than 8,000.

1           So I think talking about the water budget and the  
2 possibility that there might be some internal heterogeneity in  
3 the system is a distraction, at least as far as the dace is  
4 concerned. Because the question that the State Engineer asked  
5 and that was answered at the hearing is what are the impacts,  
6 and the impacts on the Springs are stark.

7           And moving on to Kane Springs, I think first -- the  
8 first bit of evidence that's being introduced or being  
9 discussed to exclude Kane Springs is the idea of a hydraulic  
10 head or a hydraulic gradient. And this is -- Ms. Peterson  
11 talked about this yesterday. You know, you go from that well  
12 that Lincoln and Vidler have at the boundary at Kane Springs  
13 Valley, and you go to basically Central Coyote Springs Valley  
14 where --

15           THE COURT: You're talking about the 6,000-foot  
16 difference?

17           MR. LAKE: No. I'm talking about the 60-foot  
18 difference.

19           THE COURT: Okay. Oh, is it 60 feet?

20           MR. LAKE: Yeah. Well, there's a 60-foot difference.

21           THE COURT: Oh, 60 feet.

22           MR. LAKE: And that's drawing a line from Kane  
23 Springs Valley to like Central Coyote Springs Valley. It's  
24 actually bypassing the monitoring -- the CSVN-4 monitoring well  
25 that's in Northern Coyote Springs Valley.

1           Now, the difference in elevation between those two  
2 wells so that the top level of water -- and that's the  
3 important part again. This is like the top of the bucket.  
4 This is the top of the water in the bucket. The difference  
5 between those two locations is 5.5 feet, and that was shown in  
6 the hydrograph that Lincoln and Vidler put up yesterday showing  
7 the two responses. That slide was introduced to discuss the  
8 issue with the transducer.

9           But if you go back to that slide and look at it, and  
10 unfortunately I don't have a copy that I can put up, but if you  
11 go back up to that slide and look at it, the scale on that  
12 shows you the difference between elevations, and it's 5 feet.  
13 That's a 55-foot difference over several miles. I think it's  
14 over 2 miles.

15           THE COURT: Okay. I think you need you to explain  
16 that to me one more time.

17           MR. LAKE: Okay.

18           THE COURT: So there's a 60-foot difference between  
19 the water lines.

20           MR. LAKE: So there's a -- I'm going to use a visual  
21 here, and I'm going to try to describe as well as I can for the  
22 record what I'm doing with this piece of paper.

23           But the slope is like this. It's --

24           THE COURT: So you're holding a piece of paper at  
25 like a slopy angle.

1 MR. DOTSON: Does this work?

2 (Pause in the proceedings.)

3 MR. LAKE: So it's basically you see that the aquifer  
4 is flat, essentially flat.

5 THE COURT: Okay.

6 MR. LAKE: And throughout a lot of its extent, and  
7 we're talking about, you know, especially in Coyote Springs  
8 Valley and the Muddy River Springs area you see this  
9 anomalously flat surface, and that's not normal in groundwater.  
10 Groundwater usually slopes a little bit one way or the other.

11 THE COURT: Because it has to flow somewhere.

12 MR. LAKE: Yeah. Sometimes a lot. Like in the case  
13 of the Pahranaगत shear zone, you have thousands of feet of  
14 difference.

15 But what you're seeing in between, I would say  
16 Central Coyote Springs Valley, sort of in the vicinity of where  
17 the development would be, going north and east from there, so  
18 I'm -- I'm going to use the State Engineer's map here for this.

19 THE COURT: Okay.

20 MR. LAKE: I'll stand over there so everybody can  
21 see.

22 THE COURT: Okay. Can you hear him?

23 We just still need to make sure that we can hear.

24 (Pause in the proceedings.)

25 MR. LAKE: Okay. Thank you.

1           This central part, so CSI-4, MX-5, CSVM-1, this is  
2 the flat, the anomalously flat part. Now, you have the slope  
3 increases here in Northern Coyote Springs Valley trending  
4 towards Kane Springs Valley. So you start to see the increase  
5 in slope around here. It continues through CSVM-4.

6           THE COURT: And let me be clear. When you're talking  
7 about slope, are you talking about slope in the aquifer? Are  
8 you talking about slope in the land above?

9           MR. LAKE: In the aquifer.

10          THE COURT: Okay. Thank you.

11          MR. LAKE: So this is the difference. So when you  
12 drill the well, this is the difference in groundwater level at  
13 the top, like the top water level of the well, the top of the  
14 water. It's the elevation of that surface, and that's actually  
15 also what you're seeing in all these hydrographs except for the  
16 spring flow ones. Like, these blue lines, that's what's also  
17 being represented.

18          I think we can put this down now. Thanks.

19          THE COURT: Okay. So are you -- so then as it moves  
20 north, this aquifer or the top of the aquifer basically starts  
21 to slope up (indiscernible)?

22          MR. LAKE: It starts to slope, but not very much.

23          THE COURT: Okay.

24          MR. LAKE: And that's what I wanted to talk about.  
25 So between CSVM-4 and Coyote Springs Valley and KMW-1 -- that's

1 about a 2-mile difference -- there's a 5.5-foot slope. Now  
2 that's more slope than you see in Central Coyote Springs  
3 Valley, but it's still like -- I think it was Dr. Felling  
4 who -- or Mr. Felling who testified. It's still very flat.

5           So the actual slope, you know, when you look at  
6 5.5 feet over 2 miles, and this is in the record at Record on  
7 Appeal 707 and also at 34534. The slope is 0.00042, and that's  
8 why people are saying it's flat, because it's barely anything.  
9 And that very, you know, flat surface is one indication that  
10 there's a hydraulic connection here. And as many people have  
11 already discussed, another indication is that pumping test  
12 impacts were observed at that KMW-1 well. So we saw pumping  
13 test impacts in Kane Springs.

14           This means that even if there is a fault structure  
15 there, and there could be, the evidence was inconclusive. The  
16 State Engineer acknowledged that in Order 1309. It's not  
17 acting as a barrier. You have these two very indicative  
18 phenomenon where water is flowing, and water is at the same  
19 level. And that shows that there's a connection. And by  
20 connection it means a connection that could lead to impacts in  
21 one of the other basins. And because that's the important part  
22 here. Lowering water levels, lowering spring flows.

23           The Fish and Wildlife Service actually -- and State  
24 Engineer both acknowledged this when Lincoln and Vidler applied  
25 for their water rights in Kane Springs Valley. Ruling 5712 --

1 and this has also been discussed -- acknowledges the close  
2 hydrologic connection. It discusses how Lincoln and Vidler's  
3 pumping test suggests that impacts would radiate across the  
4 supposed boundary between the basins.

5 Fish and Wildlife Service agreed, and that's why you  
6 have an incidental take statement issued in conjunction with  
7 that project. Because Fish and Wildlife Services analysis  
8 concluded that, yes, you know, pumping has a high likelihood of  
9 causing take of the dace. Pumping in Kane Springs has a high  
10 likelihood of causing take of the dace. So Lincoln and Vidler  
11 need an incidental take statement.

12 And that's really -- that's really the extent of what  
13 I think I can talk about without being completely redundant.

14 So if there are no further questions, I will  
15 conclude.

16 THE COURT: Okay. Perfect timing. That's great.  
17 We're almost straight up at noon.

18 Okay. So thank you.

19 So at this point, why don't we break for lunch. Back  
20 at 1:00.

21 Just so I am clear on the order of who's next, I've  
22 got Muddy Valley, Lincoln Pacific and then Lincoln Vidler. So  
23 you guys are up in the afternoon. And then if we still have  
24 some time, I guess we'll start going into the replies.

25 (Proceedings recessed at 11:57 a.m., until 1:00 p.m.)

1                   **ARGUMENT FOR MUDDY VALLEY IRRIGATION COMPANY**

2                   MR. DOTSON: Good afternoon, Your Honor. Rob Dotson  
3 again, along with Steve King on behalf of Muddy Valley  
4 Irrigation Company.

5                   And this is -- well, just some housekeeping items  
6 first. I will get a printout of this to provide to your clerk,  
7 and then also what I have instructed have happen with my staff  
8 in Reno and I hope has happened, is to file a notice with just  
9 the slides, not my notes that -- my little cheat sheet portion  
10 into the record for my opening. And I will do the same thing  
11 for this, and then for my reply presentation, as well, assuming  
12 that I have a PowerPoint for that, which I plan on having.

13                  THE COURT: Okay.

14                  MR. DOTSON: So as I already described in our little  
15 discussion earlier, this is my opportunity on behalf of the  
16 irrigation company to address the issues that -- where we  
17 support the Order 1309. And as I think we made clear in our  
18 opening, in our briefs, and I think throughout our briefs, in  
19 fact, is that we're seeking a remand, only a portion. Really,  
20 it's in, like, two paragraphs and the supporting documents of  
21 1309.

22                  There's a lot of things about 1309 that we agree with  
23 and, in fact, our problem is really that some of 1309, to us,  
24 doesn't seem consistent with that -- those particular offending  
25 paragraphs.

1           So it is our position that certain portions of 1309  
2 should be maintained and affirmed. And in fact, I think you'll  
3 recall in my opening discussion, I kind of -- baited maybe  
4 isn't -- is too strong of a term, the State Engineer to try to  
5 suggest, hey, maybe we can get a stipulation out of them,  
6 and -- but we didn't quite get that, Your Honor.

7           But what we did is a statement that, if you do choose  
8 to remand, that they would request that you simply strike that  
9 element, right. Or if you should -- or instead of remanding,  
10 I'm sorry, I misstated it.

11           Instead of remanding, simply strike --

12           THE COURT: Oh, that I would strike it.

13           MR. DOTSON: -- that element. That's what I  
14 understood to be the statement.

15           Now, this is also a time for me to do a little  
16 mea culpa. Because unlike Mr. Taggart and some of the other  
17 people in this room that have made their lives in water law, I  
18 am not a water law lawyer and I will admit that freely and  
19 openly. I'm a -- I'm a country litigator who moved to Reno to  
20 ski for a few years in 1994 and, I don't know, I lost track of  
21 time. And so, that's me.

22           But I -- and I have learned as I've listened, in  
23 particular to Vidler's arguments yesterday, that I had some  
24 misunderstanding that I want to correct. And I think it's  
25 understandable, my misunderstandings, but -- and I think that

1 some of the things I have heard from the Court might indicate  
2 that you have some of those same misunderstandings.

3 THE COURT: Could be.

4 MR. DOTSON: And so I want to talk about some of  
5 those issues as -- and those would mostly be at the end of the  
6 presentation. But as I go through it, I'll be discussing some  
7 of those things.

8 So in support of the State Engineer's Order 1309, we  
9 agree that there has to be a designation and a management  
10 conjunctively, jointly, both, likely. Because I've learned a  
11 little bit about those statements and that I think that that  
12 nomenclature in the state law, the delineation or the  
13 designation of a basin, are things that those words do matter  
14 and they're similar enough that it's easy to become confused.  
15 And in fact, I think that sometimes the State Engineer uses it  
16 and it doesn't necessarily mean the term of art that they mean.

17 And one of the things that as I was -- so I also  
18 wasn't at the hearing that we've been talking about. I --  
19 first thing I filed in this thing was the petition for judicial  
20 review. But I looked through all the record, and one of the  
21 issues we're going to talk about is something that I didn't see  
22 in the record but I've heard over the last few days and I want  
23 to bring out.

24 And this is that first point: I said -- we said,  
25 Muddy Valley Irrigation Company said in its answering brief in

1 support of this that no party has the right to challenge the  
2 creation of the Lower White River Flow System. And I'll talk  
3 about majorly four categories and I am going to go through  
4 those right now.

5           And the reason for that was that because I didn't  
6 think it was still timely. Because I thought that's what 1303  
7 did. And I said that because in the very first paragraph, the  
8 recitals -- and the thing about water law, that my observation  
9 may be incorrect, is that they -- they rely -- they do a lot of  
10 recitals. And sometimes in contract, recitals mean very  
11 little, right. It's just a waste of -- these are the parties  
12 and this is what this is about. And other times, there's huge  
13 fights over recitals.

14           But in this instance, I think that there's a lot of  
15 important stuff that come out of the recitals in the orders in  
16 this case and we're going to spend some time with those.

17           But the very first recital at page 70 of the record  
18 is,

19                       Whereas, the purpose of this interim order  
20                       is to designate a multi-basin area known to  
21                       share a close hydrologic connection as a joint  
22                       administrative unit which shall be known as the  
23                       Lower White River Flow System.

24           Well, I read that and I understood that to mean that  
25 this was a 534.030 designation of this entire area that we were

1 now discussing, and then everybody who showed up at the hearing  
2 then knew that that was the designation. If you read on, on  
3 the next page it goes through each of the basins and it points  
4 out when those were designated, which was also a head-fake for  
5 me, Your Honor. Because I'm, like, okay, now they're using the  
6 term of art and we're talking about this Lower White River Flow  
7 System and it includes Kane Springs, at least that's what's in  
8 my head.

9 I think based upon what Vidler said and what the  
10 State Engineer said, my understanding was incorrect. There's  
11 no 534.030 designation for Kane Springs. And to the extent my  
12 briefs would suggest otherwise -- and I think fortunately just  
13 because of loose language it doesn't really say that otherwise,  
14 but I'll tell you that's what I was thinking when I drafted it.  
15 And so if it reads that way, that's wrong.

16 But all of the powers and rights of the State  
17 Engineer to the initial toolbox, as it's been called, to  
18 address and secure and protect and exercise its rights, protect  
19 the public policy under 534.020 apply at least to those other  
20 basins, everything except King Sprains, and maybe not including  
21 that area of the Black Mountains too. I guess that's up to you  
22 to figure out. But as I'm speaking now, I'm recognizing that.

23 However, as to everybody else, 1303 -- 1303 told them  
24 in the first paragraph what we were doing, right. And then it  
25 keeps going on and it tells them what they were doing. And so

1 to suggest that this was new, they should have appealed 1303  
2 and there should have been a petition for judicial review, in  
3 my answering brief --

4 THE COURT: So let me ask you -- oh, so let me ask  
5 you. So I had the question --

6 MR. DOTSON: Yeah. Go ahead.

7 THE COURT: -- yesterday --

8 MR. DOTSON: That's what I was getting to --

9 THE COURT: Oh, okay.

10 MR. DOTSON: -- that question.

11 THE COURT: All right. That's fine.

12 MR. DOTSON: Yeah. But go ahead and ask it. You  
13 asked was --

14 THE COURT: Well, I mean the question is --

15 MR. DOTSON: Can you repeal a petition for judicial  
16 review.

17 THE COURT: Well, no, no. The question is can you  
18 appeal an --

19 MR. DOTSON: I'm sorry --

20 THE COURT: -- interim order.

21 MR. DOTSON: An interim order. That's the question.

22 THE COURT: Right.

23 MR. DOTSON: Well, I would have said yes and I  
24 thought that's what it said earlier. But earlier in the -- was  
25 it Monday, I think I heard Coyote Springs say they did appeal

1 it. I must have missed this in the order, and that there was a  
2 settlement.

3 And so that's something that I just want to be very  
4 candid about. Because in my answer, and I think others might  
5 be able -- I'm happy to yield the floor to counsel --

6 MR. ROBINSON: Okay.

7 MR. DOTSON: -- if he wants to answer that  
8 question --

9 MR. ROBINSON: Yeah.

10 MR. DOTSON: -- for us --

11 THE COURT: Sure.

12 MR. DOTSON: -- just because in the interest of  
13 being -- he can use my time.

14 THE COURT: Sure.

15 MR. DOTSON: In the interest of being clear about it.  
16 Because I said no party appealed and they're forever barred --

17 MR. ROBINSON: Okay.

18 MR. DOTSON: -- from that.

19 MR. ROBINSON: Mr. Dotson is thoroughly confused.

20 THE COURT: Okay.

21 MR. DOTSON: All right. I may be.

22 MR. ROBINSON: I think we can stipulate to that.

23 First moratorium shutdown of Coyote Springs was the May 16th,  
24 2018 letter. We challenged that in a petition for judicial  
25 review.

1 THE COURT: Okay.

2 MR. ROBINSON: That case was settled in August of  
3 2018. 1303 came out in January, I believe, of 2019.

4 THE COURT: Okay.

5 MR. ROBINSON: We challenged that. We filed a  
6 petition for judicial review.

7 THE COURT: Okay.

8 MR. ROBINSON: And the State Engineer was a  
9 respondent. We did a lot of briefing. And by the time we got  
10 to decide various motions, the 1309 hearing was two weeks away  
11 and we agreed to stay the petition for judicial review of 1303.

12 THE COURT: So where is that?

13 MR. DOTSON: Yeah.

14 MR. ROBINSON: 1303 has been rescinded. And so that  
15 case is gone.

16 THE COURT: Oh, so it made it moot.

17 MR. ROBINSON: Yes.

18 MR. DOTSON: All right. All right. So I -- I  
19 think -- I think that makes me right and not confused, by the  
20 way, Your Honor.

21 THE COURT: Okay.

22 MR. DOTSON: And so let me keep talking through this  
23 because now, now we're at the same place I was at about 10:30  
24 last night in my hotel room and -- which is okay.

25 So I was wrong when I said no party had -- had filed

1 a petition for review. And I didn't see that in the record,  
2 candidly. It may be here, but it may have also just failed to  
3 show up.

4 And so I think that proves that you can file a  
5 petition for -- for judicial review of an interim order, and I  
6 don't see why you wouldn't when it does what this does. And  
7 that I'm not sure what effect that has, because contrary to  
8 what my colleague just said, I would disagree that 1309  
9 rescinds that portion of 1303.

10 Because here's what 1309 says on the record at  
11 page 67. It says --

12 THE COURT: Wait, let me --

13 MR. DOTSON: -- in Number 6 --

14 THE COURT: Let me just clarify.

15 MR. DOTSON: Sure. Go ahead.

16 THE COURT: Really quickly.

17 MR. DOTSON: Yeah.

18 THE COURT: So Mr. Robinson.

19 MR. ROBINSON: Yes, ma'am.

20 THE COURT: On the -- of the petition for judicial  
21 review on 1303, was the issue whether or not the Nevada State  
22 Engineer has the authority to jointly manage or conjunctively  
23 manage?

24 MR. ROBINSON: All of the above.

25 THE COURT: Okay.

1 MR. DOTSON: So page 67 of the order, page 66 -- or  
2 66 of the order, page 67 of the decree -- or of the record  
3 says: All other matters set forth in the interim 1303 that are  
4 not specifically addressed herein are hereby rescinded.

5 Well, this issue is specifically addressed in 1309.  
6 And so I don't think that sentence can be argued to rescind  
7 1303. It doesn't because it is addressed in 1309. And so I  
8 question the timeliness of -- of the -- and the ability to  
9 raise an objection to the Lower White River Flow System, and  
10 that's a technical argument.

11 Sometimes people call those --

12 THE COURT: Well, that's a technical legal argument.

13 MR. DOTSON: It's a technical legal argument --

14 THE COURT: Yeah. It is. Sure.

15 MR. DOTSON: -- that has to be determined *de novo*.  
16 And because I have a terrible poker face, I'm anything -- I got  
17 to be transparent because I just can't -- I used to  
18 cross-examine witnesses walking away from them.

19 So I wanted to raise it to Your Honor because I got  
20 two hours and 56 minutes. I'm not going to need it all.  
21 Because I could see that there was some confusion here. And I  
22 appreciate Counsel's statements so that we can get the record  
23 at least as straight --

24 THE COURT: Let me --

25 MR. DOTSON: -- as we can.

1 THE COURT: Let me clarify it. Is any of that in the  
2 record on appeal?

3 MR. ROBINSON: Yes. It's in our petition. It's in  
4 our briefs and --

5 THE COURT: No. I mean the petition for a judicial  
6 review of 1303.

7 MR. ROBINSON: Yes.

8 THE COURT: Okay. All right. I just want to make  
9 sure.

10 MR. ROBINSON: He hasn't read our petition, nor has  
11 he read our briefs.

12 THE COURT: Wait, did --

13 MR. TAGGART: Your Honor, I thought that that was  
14 offered and it wasn't allowed based on a motion to strike.

15 MR. BOLOTIN: And there was certain -- I'd have to go  
16 back and look at the record --

17 MR. DOTSON: Let's put on the record who is speaking,  
18 please, so we get this --

19 THE COURT: Yes. Sorry, yes.

20 MR. BOLOTIN: This is James Bolotin, Deputy Attorney  
21 General for the State Engineer.

22 There was certain parts related to 1303 were in the  
23 record obviously.

24 MR. DOTSON: Sure.

25 MR. BOLOTIN: But then there were certain documents

1 that CSI did not introduce during the administrative process  
2 and they sought to do a request for judicial notice, I believe,  
3 with their opening brief.

4 THE COURT: Right.

5 MR. BOLOTIN: And we opposed the judicial notice  
6 because --

7 THE COURT: It was outside the record.

8 MR. BOLOTIN: -- they had a chance to put it in the  
9 record and it wasn't in the record.

10 THE COURT: Okay. All right. Well, I'll look  
11 through the record just to make sure.

12 MR. DOTSON: And it's a big record, so --

13 THE COURT: Oh, yeah.

14 MR. DOTSON: So let's get to the second point.  
15 Because here's the good news, Your Honor. I don't think you  
16 actually have to find -- as with -- as with many things in the  
17 law, you get to the same result on multiple paths. And I think  
18 the path is that the designation on the management --  
19 designation of that management area, the Lower White River Flow  
20 System, can be upheld.

21 And although this would be a highly technical --  
22 well, maybe not highly technical, a technical basis to reject  
23 their petitions, those who would challenge this issue, I think  
24 it is a valid one.

25 The next issue on this point is, I think the State

1 Engineer -- we think State Engineer possesses the legal  
2 authority to create and manage the Lower White River Flow  
3 System as a single basin made up of various sub-basins.

4 Third, that the creation of the Lower White River  
5 Flow System is based on substantial evidence.

6 And fourth, that the creation and management of the  
7 Lower White River Flow System makes just logical sense. It  
8 works. Sometimes, and we've -- I talked about this in my  
9 opening. And this is -- this -- this is where I'm going to use  
10 the same common sense argument that, and the power of the  
11 court, to enforce its decree for this point as well. And that  
12 was the argument I used against the State Engineer on the  
13 amount of flow in the Muddy River and allowing a huge reduction  
14 while still finding that not to conflict with the decree.

15 I think you can use the logic of the decree and, just  
16 like the jury instruction that says that our jurors can --  
17 don't have to check their common sense at the door, neither  
18 does -- do the judges, especially when it's the decree court  
19 who's ruling on the decree and enforcing it.

20 So getting to that first point, the time to challenge  
21 the creation of the joint management of the Lower White River  
22 Flow System has long passed. Now, maybe it's already been  
23 challenged. Maybe it's in some other court. I don't know.

24 But it is clear, this I do know, because even though  
25 I'm not a water law specialist, I take -- I took the CLEs when

1 I first started getting involved in this and -- and I can read  
2 statutes.

3           And as the Supreme Court justice who is my father's  
4 former law partner who swore my wife and I in Iowa said, you  
5 know, Rob, the advice I give was read the stuff that it's about  
6 and you can do most anything because if it's too complicated,  
7 we can't really enforce it at the Supreme Court. And I think  
8 that was pretty good advice that's worked pretty well for me  
9 since '94.

10           And we read a lot -- what this Court needs to do is  
11 really look at the cases and look at the statutes and think  
12 about those things. And I think there's, you know -- there's  
13 some science overlay, but those are just facts just like facts  
14 in any other case. And most of what you're going to be doing  
15 is applying law.

16           This statute 533.4 -- or 450, mostly dyslexic,  
17 requires a party to seek judicial review of any order or  
18 decision of the State Engineer within 30 days. I said in my  
19 briefs nobody did it because that's what I thought. Even if  
20 they did, it sounds like it at least hasn't been pursued. It  
21 may be stale. It may have been dismissed. I don't know. If  
22 it was dismissed, then this technical situation still exists  
23 and it's an impediment to those who are challenging this, so at  
24 least those that were included within that 1303 order.

25           Based upon the record that I saw, it does -- didn't

1 appear that any party had sought review within that period of  
2 time. But I will concede, and so that's why I put it in the  
3 slide, that the oral argument in -- before Your Honor this week  
4 has indicated to the contrary. And obviously, we've had a  
5 representation to the contrary.

6 Order 1303 remains in full force and effect regarding  
7 the creation and management of the Lower White River Flow  
8 System. And that would be my reading unless there's a petition  
9 for judicial review someplace else in this building.

10 Okay. But you know what, this is the -- 1309 did not  
11 create the Lower White River Flow System. In fact, even to the  
12 extent that 1303 has the words that I described, I don't think  
13 that makes sense because -- and I'm actually -- because I have  
14 so much time and we're a little ahead, I'm actually going to  
15 take some time to look at 1169.

16 Because in my opening and in some of the discussion  
17 by the State Engineer and some of the things that SNWA has  
18 argued, there has been the contention that this is not a new  
19 thing, and it's not. If you look at 1169, we're going to --  
20 actually going to look at this quote, it warns that development  
21 of the carbonate water is risky and effects may be disastrous  
22 for developers and current users.

23 So I'm going to switch here. It's not what I  
24 intended to do. This is 1169. This was entered in 2002 before  
25 I ever did anything in the water law. But look at the very

1 first sentence: Holding in abeyance the carbonate-rock aquifer  
2 system groundwater applications.

3 This -- so 1303, or the letter that counsel  
4 referenced, which as we've heard discussion about actually this  
5 week, that's not the first time things were -- the brakes were  
6 pumped in this aquifer system. Not at all.

7 And I want to actually take the time to go through a  
8 few other things. So -- all right. So here are all these  
9 recitals.

10 THE COURT: And this is slide?

11 MR. DOTSON: This is not a slide.

12 THE COURT: Oh.

13 MR. DOTSON: This is from the actual amended --

14 THE COURT: Order itself.

15 MR. DOTSON: -- record, which I have a little  
16 complaint about because it's so monstrous, it's really clunky.  
17 But this is the record on appeal at page 659. And so I  
18 literally have just loaded the amended record onto -- that's  
19 what's on the -- on this -- in front of you, actually.

20 So at the end of the first page we've got a -- the  
21 first recital that's kind of interesting. In 1984, the Water  
22 Resources Division of the United States Department of Interior,  
23 Geologic Survey, proposed a 10-year investigation of the entire  
24 Carbonate Terrane, I don't know if it's terrane or terrain --

25 THE COURT: Terrain?

1 MR. DOTSON: Maybe that's a fancy way of spelling  
2 terrain, which includes the carbonate-rock aquifers of the  
3 areas referenced above. This study was proposed because the  
4 water resources of Carbonate Terrane were not well-defined.  
5 The hydrology and geology of the area are complex and the data  
6 was sparse. And it cites to this -- let me get farther, lower  
7 here. Sorry. It cites to this memorandum, August 3rd, 1984  
8 from Terry Kaiser -- or Katzer, Nevada Office Chief, Water  
9 Resources Division.

10 Well, that's going to become pretty important because  
11 look at this next recital: Whereas, it has been known since  
12 1984 that to arrive at some reasonable understanding of the  
13 carbonate-rock aquifer system, substantial amounts of money  
14 would be required to develop the science. A significant period  
15 of study would be required and that, unless this understanding  
16 is reached, the development of carbonate water is risky and the  
17 resultant effects maybe be disastrous for the developers and  
18 current users.

19 My client was one of those current users that is  
20 referenced in this order. This is a coming straight from 1169,  
21 Your Honor. And this is 2002 that this is happening and it's  
22 quoting something from 1984. I was still in high school in  
23 1984.

24 These are all -- this is a whole list that Engineer  
25 Ricci put in of challenges, and I'm not going to go through

1 them all, because even if I've got 2 hours and 46 minutes, we  
2 all know we don't want to hear me talk that long.

3 But there is -- one of these that stuck out was the  
4 fact that there was no significant historical pumping of  
5 groundwater from the carbonate-rock aquifer system. The  
6 groundwater models can only be used as a limited predictive  
7 tool for estimating the principal location and magnitude of the  
8 impacts of pumping groundwater from the system.

9 One of the takeaways that you're going to see as you  
10 review this, and we're going to look at some of them, is they  
11 thought there was a lot of water that could be pumped without  
12 doing much. Otherwise, obviously, none of the things that  
13 happened would have happened.

14 And but they recognized even then, the relationship  
15 between geothermal systems, the hot springs that we're talking  
16 about that are in the headwaters to the Muddy River, and the  
17 deep carbonate-rock aquifers in groundwater flow systems is not  
18 well understood.

19 So everybody knew they were on maybe thin ice as they  
20 were making these applications. And there were hundreds of --  
21 well, I guess it would be thousands of acre-feet of  
22 applications that were held in abeyance by this order. And  
23 we've heard, it's in the record, it's in this document in  
24 reference.

25 Now we're down to page 3 of the order, and this is

1 record on appeal 661: Because assurances that the adverse  
2 effects of development will not overshadow the benefits -- all  
3 right. Will not overshadow, the benefits cannot be made with a  
4 high degree of confidence. The development of the  
5 carbonate-rock aquifer system must be undertaken in gradual  
6 stages, together with adequate monitoring in order to predict  
7 through the use of a calibrated model the effects of the  
8 continued or increased development with a high degree of  
9 confidence.

10 And obviously, this is all leading up to the State  
11 Engineer at that time, Hugh Ricci's thought that, well, we've  
12 got to finally get some pumping done because we've granted  
13 thousands of acre-feet of water and we really don't know how  
14 this carbonate-rock aquifer thing is going to work.

15 I'm not going to read all of this, but at the end of  
16 the next recital,

17 This approach would hopefully avoid the  
18 havoc that could be created by the curtailment  
19 of water by those who have come to rely on  
20 its -- it if impacts occur requiring curtailment  
21 of the water use.

22 There was reference earlier to yellow lights. Well,  
23 these are red lights. This is, you got to stop. They  
24 literally did stop and say we've got to get this pumping done.

25 The 1995 water resources investigation report

1 estimates the total water budget for all southern Nevada  
2 aquifers from the natural recharge to the mountains and  
3 subsurface inflow to the study area to be about 160,000  
4 acre-feet annually, and discharges from major discharge areas  
5 to be about 77,000 acre-feet annually.

6 I have this in red because it's particularly  
7 important to me. Because if you go down and you look at that  
8 footnote, you'll see that the discharge areas are identified as  
9 Muddy River Springs, 36,000 acre-feet annually.

10 Now, you'll recall from my opening that we'll  
11 compromise. We'll live with the result of this order. We're  
12 not going to appeal the determination that the -- the flow  
13 predevelopment was 33,000 or can be used, 33,090 can be used.  
14 But you can see that even as of 2002, they were using a much  
15 higher number. Which, as you review the other -- the other  
16 portions of the record that I referred to, particularly S --  
17 the SNWA report which is found beginning at page 41,930 of the  
18 record, there were periods of time where the flow was clearly  
19 higher than that. And you can make an argument that the flow  
20 was clearly higher than that and I guess that's what the State  
21 Engineer was saying here. But we're not -- to be clear on the  
22 record, that's not part of our petition for a judicial review.

23 Importantly, and this is a concept that I think  
24 Mr. Lake was discussing earlier when we were talking about  
25 recharge and subsurface flow in this next recital: Whereas, it

1 is believed that all of the recharge and subsurface inflow  
2 cannot be captured for use.

3 In other words, that 160,000 acre-foot number that we  
4 saw up above in this whole area of southern Nevada, they were  
5 recognizing that, well, we can't get it all. Plants are going  
6 to use some and, you know, you just -- it's not -- you can't --  
7 it's not just a -- it's not a budget where it's like my  
8 checking account where it can be measured with that precision.

9 So they had a big public hearing and apparently had  
10 it down here. And that's, you know, I guess interesting and  
11 perhaps important because of the ability to designate. And  
12 I -- I'm going to move away from this now, but the point that  
13 I'm making is, going back to my PowerPoint, is that it's not  
14 like 1309 in 2017, wow, look at this thing that just happened.  
15 That's not what occurred. And I know SNWA had suggested, well,  
16 really there's -- there was documents back from the '60s and  
17 things like that. Well, these are legal actions that are being  
18 taken involving the White River Flow System recognized and  
19 named by basin in 2002.

20 So in January 2014, and I don't know why I did this  
21 in my brief because there's this whole series of rulings that  
22 come in. For some reason, I picked, like, the second one here.  
23 But it had -- they all have similar language. And so this is  
24 reiterating what was obviously understood apparently back, at  
25 least in '84, that there is a close hydrologic connection

1 between these various sub-basins. So they're already calling  
2 them sub-basins, noting -- noted that -- or actually, that's  
3 me. That's my statement, sorry.

4 Noted that they share virtually all the same source  
5 and supply of water. So even if they are only now recognized  
6 and the nomenclature of sub-basin is used, back in 2014, it was  
7 understood.

8 And that is supportive in why the State Engineer's  
9 action in 1309 should not have been any surprise, with the  
10 exception perhaps of Kane Springs because, obviously, it wasn't  
11 included in those earlier discussions, though, I can't say what  
12 was included or wasn't included in the actual record with  
13 and -- and what the science was in the '80s, obviously.

14 And Vidler showed the carbonate-rock aquifer in that  
15 1169 references it as well, this underlayment. But it also  
16 talks about aquifers within the carbonate rock. So there seems  
17 to have been, at least as of 1169, an understanding that they  
18 aren't all connected.

19 Order 1303 recognized it as a joint administrative  
20 unit. And then they sought input about the geographic  
21 boundary. And clearly, based upon the record, it was then that  
22 Kane Springs and that -- was added and that this line was  
23 moved.

24 Actually, before I -- well, let's just -- let's just  
25 go ahead. Go ahead.

1           So let's talk about the legal authority to do it.  
2 And this is -- I kind of foreshadowed this earlier. Yeah,  
3 we've heard a lot about the fact that the word basin is not  
4 defined in the statute. That's really interesting. And I  
5 remember figuring that out, like, in 2010 because I -- I'd  
6 probably been working in this area for about a year before I  
7 realized that. And -- and I keep thinking, well, it's got to  
8 be someplace, but it's not.

9           And I think this -- the arguments you've heard this  
10 week, Your Honor, kind of explain why. It -- it would have  
11 been -- well, creating a legal construct that doesn't  
12 necessarily fit within the natural world. And so having it be  
13 more flexible makes the law able to be more flexible.

14           So but in this instance, we know that there is the  
15 stated policy. And you've heard a lot about 533.024 and -- and  
16 the policy of conjunctive management, and I talked about this  
17 in our answering brief. And we discussed how, you know, you --  
18 there -- we cite to some cases that this isn't just a  
19 throwaway, though, either. It is guidance. The legislature  
20 does provide guidance to the State Engineer here about the  
21 public policy of the state. And by the way, when we get to the  
22 end, it does make common sense too.

23           Now, there are some limitations put on that. And the  
24 State Engineer, at least in their briefing, certainly cited to  
25 this. And this is the protection of, in this instance, the

1 decreed water rights from my client and others similarly  
2 situated.

3           And there has been no showing that -- that the State  
4 Engineer's action isn't authorized by that, and in fact, isn't  
5 even necessary for there to have been a statute. If you just  
6 had a decree and you have just an enabling act that says, hey,  
7 you've got to help manage these decrees -- let's pretend we had  
8 a different system, right, which could happen, I suppose. And  
9 the State Engineer is not awarding permits and certificates and  
10 all that and it's just decreed rights. But the State Engineer  
11 is kind of like a water master.

12           Well, isn't that really what he's doing here? What  
13 he's doing is, he is making sure that the water that has been  
14 decreed under the prior appropriation document continues to  
15 flow and serve. That's what the creation of this area does.  
16 Because what he's identifying is, that is the area that impacts  
17 these -- this decreed water.

18           Now, there's a question about what -- how much can be  
19 pupped. And on that, you know that we disagree with the State  
20 Engineer about the 8,000. We disagree about the number, but we  
21 don't disagree that there has to be a cap and there has to be  
22 control. And in fact, it is our position that this statute and  
23 the decree is what authorizes the State Engineer to take  
24 whatever action is necessary to make sure that that water is  
25 protected.

1 In fact, to not do so, he would have to violate that  
2 statute. He would have to violate your decree. And frankly,  
3 we think that's what's happened with the 8,000. But there is  
4 some number of less than that that probably would be perfect  
5 and would be fine.

6 Now, this comes back to my mistaken understanding.  
7 534.030 allows the State Engineer to, quote, designate basins  
8 and to make other describing boundaries. Now, you've been  
9 focusing on that word, area. I focused on that as well in that  
10 statute. Well, in that statute and in 534.020.

11 And it doesn't say that the area has to be -- it uses  
12 the example in the language of within the -- the basin, but it  
13 doesn't limit the -- it doesn't say it has to be within a  
14 basin.

15 The State Engineer may -- and now, this is 534.020:  
16 The State Engineer may make rules and regulations within an  
17 area designated by him wherein his judgment the groundwater  
18 basin is being depleted.

19 Well, he made the determination that all of these  
20 basins, save and except Kane Springs, were designated basins.  
21 And if you look at 1303 on the second page, it goes through  
22 those. I'm just going to click off so I can tell what slide  
23 I'm on. I am on Slide 6 now, Your Honor.

24 What's more is there is substantial evidence in the  
25 record to support the creation of the White River Flow System.

1 We've talked about a lot of that already. And but what is  
2 substantial evidence, that which a reasonable mind might accept  
3 as adequate to support a conclusion.

4           Importantly, just because there is contrary evidence  
5 doesn't mean there's not substantial evidence. It doesn't mean  
6 everything would have to be -- if that were the case, we'd  
7 have -- never have a decision in any court, frankly, because  
8 you better not get to trial if there really is no question of  
9 fact and there's no substantial evidence -- there's no evidence  
10 if -- if not substantial, in a contrary position.

11           So the mere existence of a geologic study proposed by  
12 Coyote Springs doesn't mean that the -- that the State Engineer  
13 can't make a decision that runs contrary to that geologic  
14 study. What the -- what the State Engineer has to do is, it  
15 has to -- he has to or they have to look at that evidence,  
16 assuming it's valid evidence, and then weigh it in the  
17 decision, which that clearly did happen.

18           In this instance when you look at 1309, the -- the  
19 State Engineer goes through the evidence. And it is clear,  
20 based upon the conclusion and those words there, that greater  
21 weight was placed on the hydrographs and the pumping and his  
22 own professional judgment than the determination and the expert  
23 testimony regarding, in the example I gave, the geologic  
24 testimony that might separate certain areas from others.

25           He made the determination that the results of the

1 1169 aquifer test show hydrologic connection between the  
2 various sub-basins. And that's a basis, in MVIC's view, and  
3 provides substantial evidence that you have to create this  
4 area, whether you call it a basin or you call it several basins  
5 that are jointly administered and conjunctively administered as  
6 well, obviously, is probably form over substance.

7           It seems to me because he -- you know, again,  
8 listening to the evidence -- this wasn't really the way I  
9 walked in this -- this week, but listening to the arguments and  
10 listening to the -- looking at the law and considering it, if  
11 in 1968 all of these basins were created by him, why would it  
12 not be within his authority to say, well, these are all  
13 sub-basins of one actual basin, which makes more sense  
14 scientifically and logically, than to try to just figure out  
15 how each of these six or seven basins works if they were  
16 separately administered.

17           The test showed that pumping within one or more of  
18 the sub-basins affected water levels in adjacent basins that  
19 shared the same supply of water and that the level of water  
20 decline encompassed 1,100 square miles.

21           So there was argument yesterday from Vidler about  
22 it's only six inches, right. Six inches over 1,000 -- and some  
23 places it's more than six inches, by the way. But even if it  
24 were only six inches, over 1,100 miles, that's a lot of water.  
25 In --

1 THE COURT: Let me just -- let me just clarify  
2 something.

3 MR. DOTSON: Yeah. Sure.

4 THE COURT: So because you just said, made the  
5 argument that if the -- if in 1968 the State Engineer created  
6 all these basins that, you know, it would still be within his  
7 authority to change the areas of these basins. My  
8 understanding is that he didn't actually create that basins; is  
9 that correct?

10 MR. DOTSON: That's true. I guess God created the  
11 basins --

12 THE COURT: Oh.

13 MR. DOTSON: -- and -- or a supreme being, in my view  
14 and that --

15 THE COURT: Well, I mean --

16 MR. DOTSON: -- and that the --

17 THE COURT: I don't mean create that way.

18 MR. DOTSON: I know.

19 THE COURT: I mean delineate.

20 MR. DOTSON: He -- he and the federal government, and  
21 if you look at the -- maybe this isn't in 1169, but it is --  
22 it's in something I've read recently, that the geologic -- the  
23 federal government through, I think, the geologic survey in  
24 conjunction with the State Engineer's office, and made a  
25 determination of these areas.

1           And if you look at the map, and it's -- that's in the  
2 record and I think there's one in the record that -- that  
3 actually has more topography shown. You know, generally  
4 speaking, what it seems like they're trying to do is they're  
5 trying to pick valleys where it's a closed valley or a  
6 close-to-closed valley, but most of them aren't closed valley.

7           You know, the basin that I'm most familiar with is  
8 Lake Tahoe, which rests on the state line, of course, because  
9 California moved the state line on us so they could steal  
10 60 percent of my lake. But that is a closed basin, except for  
11 where the Truckee River comes out, right. So consequently, it  
12 filled up, kind of like what Mr. Taggart was saying. Well, if  
13 it just keeps snowing and the water doesn't go anywhere, well  
14 then it fills up. Well, that's happened there.

15           And so the State Engineer didn't create the basins,  
16 either you know, metaphysically or by himself, but they did  
17 work conjunctively with the federal government to identify  
18 them. And doesn't that make sense.

19           Counsel for -- for Coyote Springs made an interesting  
20 argument yesterday about California law, maybe it was two days  
21 ago, about we -- there's a rule against segmentation in  
22 California because you could make mistakes and things like  
23 that. But the truth is human experience tells us that it's  
24 always easier to deal with a smaller thing than a bigger thing.

25           I also found that argument interesting because that's

1 exactly what they're asking to do. He warn -- Coyote Springs  
2 was warning against segmentation, but yet, they're asking this  
3 Court to administrator it by each basin, which as we'll see  
4 later just doesn't make logical sense.

5 Can I switch to this ELMO for a moment? Is there a  
6 way to switch the -- I just turned it on. I want to talk about  
7 that 6 inches.

8 THE CLERK: Did someone unplug it?

9 MR. DOTSON: Well, that -- well, it has power.

10 THE COURT: Is it --

11 THE CLERK: I noticed there was some cords, the  
12 lights are on.

13 THE COURT: No. The lights are on.

14 THE CLERK: But I mean --

15 THE COURT: Is it plugged down there?

16 THE CLERK: I think there's other cords to it. I  
17 have it on -- on now and it isn't --

18 MR. DOTSON: Oh, you have it on?

19 THE CLERK: -- working.

20 MR. DOTSON: I've got it on.

21 THE CLERK: We have never used it in here, so --

22 MR. DOTSON: Well, let's never mind then.

23 THE COURT: Not yet.

24 MR. DOTSON: I guess I'm not going to do this. Well,  
25 I'll draw and then I'm going to try to -- and I'll hold it up

1 and then we can put it in as an exhibit if you want, if anybody  
2 wants, but --

3 So you asked Counsel for Center for Biological  
4 Diversity a question about water level and -- and this is why I  
5 was trying to help him with this because I thought maybe  
6 drawing a picture might be helpful.

7 And so -- so say that this lower line, which is  
8 conveniently blue -- we'll make this red instead, the surface.  
9 Let's say the red line is the surface of the earth and the blue  
10 straight line below it is the water level, the water table in  
11 that area. And right here, that water comes out as a spring,  
12 right.

13 THE COURT: And you're pointing to a --

14 MR. DOTSON: I'm pointing to a little X I put in  
15 the --

16 THE COURT: -- a midpoint where --

17 MR. DOTSON: Yeah.

18 THE COURT: Okay.

19 MR. DOTSON: On the -- on the red line. And then  
20 that water, which in my hypothetical here is the Muddy River,  
21 right, that water then flows down and joins with other springs  
22 and that becomes the Muddy River. And that's why when we talk  
23 about the elevation of the spring on the -- it's important.

24 Now, they use that term, again, because I'm  
25 relatively new, in this room at least, to water law, they talk

1 about the elevation of the head. What they're talking about  
2 then, I'll draw a line, is -- and I drew two parallel red  
3 lines. Let's say I drill -- somebody drilled a well and the  
4 head was where that water table was. That's where you first  
5 hit water. That's that elevation. It's that many feet below  
6 the surface, whatever. And it has an actual elevation on the  
7 earth I guess, as well.

8 But the point, well, that I would make and I think  
9 was trying to be made earlier is, let's say that the water  
10 level is actually only six inches above that point where the  
11 spring is. Once the water level goes down to -- let's take  
12 this -- let's call this number one. Let's say the water level  
13 goes down to point two, now there's no way for this water to  
14 get up to here. It can't bump up.

15 And so that's why there's so much discussion in this  
16 case, and you'll see in the record when the experts talked --  
17 talk about the height and the change in the water level.  
18 That's why it's a concern, especially with regard to a spring.  
19 Because, you know, I don't know, maybe the water level is 10  
20 feet above that spring right now. But even if there's 700 feet  
21 below, if you lose 20 feet, it doesn't matter. That's the --  
22 that's the concern that I think was trying to be articulated  
23 there.

24 Now, so that's why six inches is still a lot of  
25 water. And I think it was, you know, I think it's clear from

1 the reaction after the 1169 pump test, which wasn't as much.  
2 When you read 1169 and you read how many acre-feet were  
3 supposed to be pumped for two years and how many feet were --

4 THE COURT: That's much more --

5 MR. DOTSON: -- fortunately for my client, that much  
6 wasn't pumped and -- and you know, I want to speak for a moment  
7 about that.

8 You know, MVIC has been patient. Water law takes a  
9 long time. But the record here, Your Honor, makes it clear  
10 that for 30 years off and on my client has been suffering  
11 injury. The pump test caused injury. But in my own mind, it's  
12 kind of like I have something wrong with my knee and it's  
13 actually interfering with my skiing a little bit and I won't --  
14 going to probably have to have it scoped or some surgery done.

15 Now, God forbid, hopefully it doesn't result in the  
16 amputation of my leg, but to my client, MVIC, they -- this is  
17 all kind of the surgery to fix and cure their water right so  
18 their water right gets back, right. And that pump test, as you  
19 can see from all the hydrographs you've seen changed and -- and  
20 it caused damage, but it was understandable damage. It was not  
21 like -- it wasn't an assault on MVIC. It was in order to  
22 figure this out and ultimately protect those rights.

23 And that's fine and that's the process that the State  
24 Engineer was undergoing with 1169. That, I would argue, and  
25 I'm suspect the -- I would argue in favor of the State

1 Engineer. I'm sure the State Engineer would say the same,  
2 that's what's happening right now. That's what happened in  
3 1303. That's what's happening in 1309.

4 They're trying to -- the State Engineer is trying to  
5 execute his public trust obligations and not allow people to  
6 too much rely on water rights that will eventually have to be  
7 curtailed, because eventually my client will run out of  
8 patience and we are a prior appropriation state and will say  
9 no, no mas, we are done.

10 The State Engineer took a lot of other evidence that  
11 was adverse to joint administration and -- but what's  
12 interesting here is although there's some arguments about  
13 geology and about interconnection, it's mostly a technical  
14 argument that is being made.

15 And the existence, the mere existence of some factual  
16 information that contradicts a vast majority of other  
17 information in support of a joint area means that there is  
18 substantial evidence to support it. And that his finding is  
19 supported by substantial evidence.

20 Now, we're getting to the state -- the creation of  
21 the Lower White River Flow System makes logical sense.

22 THE COURT: And this is slide?

23 MR. DOTSON: This is -- let's just see. Because  
24 my -- I couldn't even send a printout to get a print -- this is  
25 Slide 8, Your Honor.

1           So there's a few books that exist out there, and one  
2 of them is this guy named James Davenport and he's referenced  
3 sometimes in the law. And I think he's still alive. And this  
4 is a quote from that book: Where groundwater and surface water  
5 systems are interconnected, they should not be viewed as  
6 separate sources in water management decisions.

7           Okay. And it's kind of like a treatise, I guess, is  
8 what it is. It is a treatise on water law. And it just does  
9 make common sense. If we know that there's an interconnection  
10 between these water sources, and in particular in a situation  
11 such as this, and this is very frequent as you've, I'm sure,  
12 identified during the arguments this week, that the surface  
13 water were the -- were the easiest -- that was the easiest  
14 water to put to beneficial use. So of course those are the  
15 oldest rights. And it's going to be true probably everywhere  
16 in the state.

17           And many, if not all, of those systems -- I'm sure  
18 not all, but many of those systems are decreed rights, such as  
19 this. And so if you don't take into account the effect of  
20 groundwater pumping on those decreed rights, you will  
21 invariably violate the decree, which is where I started  
22 yesterday.

23           And so to the extent that the creation of a joint  
24 area for management, the Lower White River Flow System in this  
25 instance, is being done by the State Engineer so that he can

1 protect those rights. He's following the law and it's making  
2 common sense, given the whole purpose of that office.

3 Now, there was some discussion by Coyote Springs  
4 about, well, what I care about is what happens in Basin 210.  
5 Here's the problem: The water can flow from one basin to  
6 another and it is undeterred. It does not care about the  
7 construct of artificial lines on a map. That water molecule  
8 doesn't know anything about the 232 basins that we've designed.  
9 It does not care.

10 It's going to flow. And since we know that it flows  
11 from these basins to each other and that that is the water that  
12 eventually comes out and serves my clients, it would be  
13 improper for the State Engineer to not consider that. And  
14 therefore, it is proper that the State Engineer did consider  
15 it.

16 Also, as much as everyone would like in this room,  
17 and I'm sure we would all like it, the State Engineer, nor the  
18 state, nor even you, Your Honor, can cause more water to exist  
19 within the Lower White River Flow System. The amount of water  
20 that is there is the amount of water that is there. And by  
21 simply deciding you segment it into separate basins, six or  
22 seven separate basins, and then you try to administrator it  
23 within those separate basins, all you're doing is using the  
24 legal construct that we've done for convenience and setting  
25 yourself up for disaster.

1           You can't just administer Basin 210 and ignore the  
2 other basins around it. Let's just pump all the water we can  
3 out of 210 and then we'll, I guess, have all the water from the  
4 other basins flowing towards it and no water coming out of the  
5 Muddy River. That's why the State Engineer in Order 1169 did  
6 what he did, because he realized you couldn't just do that.

7           Now, and I don't know if this is -- this is the place  
8 for it, but one of the attacks that we've heard against the  
9 State Engineer relates to the public trust doctrine which, in  
10 my opening, I indicate is consistent with support of the  
11 decree.

12           And I think I cited to and I want to just read from  
13 *Mineral Country versus Lyon County*, and this is Judge Stiglich  
14 speaking in the majority. And this is -- you don't have to go  
15 very far into the opinion. This is on the third paragraph: We  
16 further hold that the state engineers -- that the state's --  
17 I'm sorry, let me start over.

18           We further hold that the state statutory water scheme  
19 is consistent with the public trust doctrine by requiring the  
20 State Engineer to consider the public interest when allocating  
21 and administering water rights. That's from the majority.

22           So just -- I just thought -- I didn't have a really  
23 good place to put that in, but that ties into the concept of --  
24 and you know, we're not taking a position with regard to the  
25 dace. I think it's clear that when there's water, which helps

1 my client, apparently that is great for the dace too.

2 But there's a lot of other issues here too. And the  
3 public interest factor doesn't obviously just end when the  
4 water right is granted. That's what that language says. It  
5 continues while you administer. And that's the importance --  
6 well, one of the importance -- part of the importance of that.

7 It also means in my opening, and I would suggest this  
8 is supportive of the state engineers, that sometimes the State  
9 Engineer and the Court has to make those tough decisions  
10 because of the public trust doctrine so that we can rely upon  
11 these decreed rights. And each of the junior rights that  
12 took -- and I don't know how many times you're going to hear  
13 this, I'm sorry, took with the understanding they got -- they  
14 were granted those rights with the understanding that they were  
15 less senior.

16 And as you saw from the 1169 recitals that I took the  
17 time to put in front of you, it was very clear in 2002 the  
18 jeopardy that existed as to how certain are these water rights  
19 that we've been granting and nobody's been pumping, and how  
20 important it was that, unlike some areas where you pump right  
21 after you get the water right, that hadn't happened here. And  
22 so he had to actually order everybody to pump so that he could  
23 figure out what the reaction of the system would be.

24 Okay. A few other attacks on the State Engineer,  
25 that there should be a separate administration of ground and

1 surface water. Again, I think we've -- I've already talked  
2 about that. It just doesn't make logical sense, right. Not  
3 only is there an encouragement of conjunctive management, but I  
4 don't care where AB 51 got granted or didn't. The bottom line  
5 is, he -- there's a decree that was entered in this Court in  
6 1920, and that is his job to defend. And it was said, you  
7 know, the -- well, I think I'll have it in here probably about  
8 take the -- you know, granteth and taketh away. Maybe that's  
9 what he has to do.

10 But the second argument that is being made is the  
11 basin-by-basin management argument. I've already -- I've  
12 already said that doesn't really seem to make sense because it  
13 will result in segmentation. It will result in the very  
14 disaster that was warned of in 1984 and revisited in 2002 and  
15 acknowledged and tried to be prevented in Order 1303 and in  
16 1309.

17 The decree was entered at a time where neither of  
18 those legal constructs were memorialized in statute. And the  
19 decree does not defer to either concept. You can look  
20 throughout the decree, and I've already encouraged you to do so  
21 because it's your court that you're enforcing. And they're not  
22 limiting those -- the protection of those sources of water to,  
23 as I say at the last bullet point, to the county line, to a  
24 particular basin. There's no such limitation in the decree;  
25 and therefore, there's no such limitation to this Court in

1 supporting the State Engineer in his efforts to protect the  
2 decree. And that is a reason not to overturn that portion of  
3 the decree.

4           The State Engineer was right to protect the tree --  
5 the decree. The State Engineer can giveth and he can taketh  
6 away. Indeed, he must. Each of these water rights that was  
7 granted after 1920 -- actually, after 1905 because the 1920  
8 decree refers back and identifies that those waters were put to  
9 beneficial use in 1905, they all take subsequent.

10           And NRS 533.0245 is all the farther that the -- that  
11 the state -- all the other -- all the instructions that the  
12 State Engineer needs to support his decision, if that decision  
13 is what is necessary to protect the decree. In fact, to do  
14 otherwise would allow his actions to damage the decreed rights.

15           In other words, if this Court were to say, you know  
16 what, you don't have authority to create this joint management  
17 area, then what this Court would be doing is it would be  
18 telling the State Engineer, listen, I know you've said the only  
19 way you could protect these decreed rights is to administer all  
20 these rights together, but I'm not going to let you do that.

21           Well then, how is he going to protect the decreed  
22 rights? I guess he'd have to go from basin to basin. Maybe he  
23 could do that. I mean, I think in my answering brief I argued  
24 that he should do that. He can do that. It's really a -- I  
25 think that's where I did the -- that was in the reply, the rose

1 by any other -- I quoted Shakespeare. But it wouldn't make any  
2 difference. He'd have to do it that way.

3 But the problem is, because the gradient is so  
4 flat -- SNWA today showed a map where the blue lines and the  
5 flows from different basins and certain paths are recognized  
6 because there's a lot of gradient, so there's a lot of flow.  
7 But if the flow is just a matter of -- if the gradient  
8 variations are a matter of a few feet or a few inches and the  
9 slope is so incredibly tiny, then it's not going to take much  
10 and it's going to be difficult to rely upon those -- it makes  
11 it very difficult on a basin-by-basin basis, you could see,  
12 because of the fact that that gradient is not nearly so strong  
13 as it is in other parts of the state. That's the importance,  
14 at least to me as I understand it, of the comment from the  
15 experts that, oh, yeah, this is incredibly flat.

16 So how can the State Engineer -- this is my fourth  
17 bullet point, and for the record --

18 THE COURT: Which slide?

19 MR. DOTSON: -- this is on page 10 of 11. How would  
20 it possibly make sense for the State Engineer not to adjust his  
21 decisions based upon new science?

22 In 1491, except for Norwegians who had figured out  
23 that the world was round, everybody thought the world was flat.  
24 Are we still -- well, I mean, some of us are, but most of us  
25 aren't walking around still thinking the world is flat and that

1 that sun is spinning around this earth.

2 It would make no sense if whoever was Caesar at the  
3 time sat down a rule that -- I guess it wouldn't have been  
4 Caesar. I'm mixing up my -- if the queen --

5 THE COURT: History.

6 MR. DOTSON: -- said no, you -- you cannot use that  
7 new technology and you must not sail any farther than this.

8 No. You're not going to do that. You're going to  
9 pay attention to the natural world around it as we understand  
10 it now. And what is clear is that our understanding of the  
11 natural world is evolving. And in these legal documents, it is  
12 one of the things I actually do dig about this area of the law,  
13 you can actually see that evolution of technology.

14 There are things that are -- that the methodologies  
15 that were used in the CSI geologic study, that's great. I  
16 mean, we're actually looking into the earth, right. And I'm  
17 sure we're going to get new and better things in that regard.  
18 And that will allow us to figure out, hey, maybe there's a  
19 pocket of water in -- in one of these basins that is totally  
20 isolated. But that's going to take further study.

21 The study -- the information we have right now is  
22 that the water looks flat from all these wells. And if we  
23 don't administer and let the State Engineer administer these,  
24 at least jointly if not in one basin, we are going to send  
25 ourselves to a disastrous conclusion.

1           There was a comment -- and this doesn't really  
2 necessarily fit about headward waters versus tributaries. And  
3 you had this -- a question about that. I don't think with  
4 regard to my client, with regard to the State Engineer's  
5 decisions here, that it makes any difference.

6           The point is, the decree says sources of water. Any  
7 water that is in the river at the point of diversion for my  
8 client is supposed to be my client's water. That's the whole  
9 point of that second grant. And I -- you know, I only mention  
10 this because of the -- of the question that was -- that was  
11 posed. This is my last slide. I think this is Slide 11.

12           Some have criticized the State Engineer and said,  
13 well, wait a second, we'll just -- the State Engineer, if you  
14 let him do this, he's just going to start strapping together  
15 basins all over the place. And I don't think I've actually  
16 heard the slippery slope term be used, but that what's it  
17 sounds like to me. It sounds like, okay, somebody's making the  
18 slippery slope argument.

19           But well, number one, there's a lot of areas in law  
20 where we do just recognize there's a slippery slope, right.  
21 But that doesn't keep us from having to administer the law in  
22 those areas. And we have -- we put certain right -- certain  
23 limitations on free speech. It doesn't -- just the mere fact  
24 that there may be some challenges doesn't mean we don't allow  
25 that to happen and we have to allow that to happen here.

1           In this instance, that determination of administering  
2 jointly several basins and making them sub-basins is supported  
3 by substantial evidence. And no matter what -- well, I would  
4 encourage that this Court's decision state as much. Because I  
5 think that's what the State Engineer is saying, saying I have  
6 substantial evidence.

7           And if this Court finds that there was substantial  
8 evidence, then that supports that decision. And if in the  
9 future there's a determination made that, I don't know what  
10 basin it would be, but say -- say the basin that Lake Tahoe is  
11 in and the basin that Carson City is in, and as far as I know,  
12 there's no hydrologic connection but we're going to  
13 administrator them together.

14           Well, there's probably not going to be substantial  
15 evidence for that, right. It just doesn't make sense, even  
16 though they are adjacent. So and then there could be a  
17 petition for judicial review at that point and you, or whoever  
18 the judge is that happens to get that, in that hypothetical I  
19 guess it would be probably a judge in Carson City --

20           THE COURT: Yes. Not here.

21           MR. DOTSON: -- Judge Wilson can decide, oh, yeah,  
22 there's -- there is or there isn't substantial evidence.  
23 That's why we have the system we have. And the mere fact that  
24 we would have to employ our legal system isn't a reason to not  
25 allow an application of the law. That's not a reason to say,

1 okay, sorry, I guess we're just going to have to let these  
2 decreed rights be violated and conflicted with because that's  
3 too hard and we can't -- we can't figure that out. That  
4 wouldn't make any sense.

5 So I think I've already made that clear with the  
6 opening on my mea culpa, my third point. It was my belief that  
7 534.030 designation had occurred to all of these basins. It  
8 hasn't. I think it's pretty clear that it's -- but it's -- but  
9 it does apply to most of them, everything but Kane Springs.  
10 And therefore, 534.020 applies to six of these basins.

11 Another little housekeeping item, on 1303 if you go  
12 to Footnote 21, there's a typo there. And it says, id -- was  
13 it Footnote 21? Oh, not 1309, sorry.

14 For Footnote 21, it says id, and the Footnote above  
15 it is 532.120. But if you look at the language that is cited  
16 at Footnote 21, it states: Whereas, within an area that has  
17 been designated by the State Engineer as provided for in NRS  
18 534 wherein the judgment of the State Engineer the groundwater  
19 basin is being depleted, the State Engineer in his or her  
20 administrative capacity may make such rules and regulations and  
21 orders as are deemed essential for the welfare of the area  
22 involved.

23 That's clearly 534.120. And I think that some people  
24 may have argued that he didn't rely upon 534.120. But that  
25 language, even though he's citing to 532.120, is clearly almost

1 a direct quote. So that's further support legally for his  
2 decision in 1303.

3 Now, lastly, I guess, the State Engineer makes a  
4 determination that 8,000 acre-feet can be pumped. And as you  
5 know, we do not agree with that so I'm not supporting that. We  
6 do support that some cap below that should be arrived at. And  
7 we say that because if you just read the order and you look at  
8 the science that he cites to, it clearly just doesn't make  
9 logical sense because it couldn't physically return the flow of  
10 the river back to its predevelopment flows if you are just  
11 maybe reaching a steady state.

12 Yesterday, the State Engineer -- and this is just  
13 kind of a friendly clarification or amendment, in support of  
14 the order said the perineal yield of the area of the Lower  
15 White River Flow System was 8,000 acre-feet. And maybe that is  
16 correct in water-speak, but so as to avoid the confusion, I  
17 think that meant above the decree. So in other words, above  
18 the decreed flows.

19 In my argument on behalf of the State Engineer would  
20 be that that must mean it's 8,000 plus 33,900 is the perineal  
21 yield of this area, because that's how much the flow is coming  
22 out of the Muddy River, there should be coming out of the Muddy  
23 River, 33,900. The problem is, that math just doesn't make  
24 sense which is why we didn't support him on the 8,000.

25 But clearly, there is some perineal yield above, or

1 at least my client thinks, there's some system perineal yield  
2 above the flow of the Muddy River. In other words, there is --  
3 you know, maybe it's not the 100,000 acre-feet that somebody at  
4 one point in time thought could be pumped from this area, but  
5 there is some amount that can be pumped from this area. And  
6 this Court, although we urge a reversal of the 8,000 acre-feet,  
7 should support the State Engineer's determination that some cap  
8 that is consistent with the additional available water over and  
9 above the decree can be developed and put to beneficial use  
10 from the groundwater of this area.

11 Court's indulgence while I consult with my  
12 co-counsel. All right. So after consulting with -- consulting  
13 with Mr. King, he has a -- he has a great breadth and depth of  
14 knowledge in water law. And he has pointed out to me that, in  
15 fact, the Davenport book and other sources identify that they  
16 don't really call them designated or delineated. They talk  
17 about the basins having been mapped.

18 And that actually makes perfect sense, and it makes  
19 sense considering the argument we've seen this week and some  
20 statements from the -- from -- well, from multiple parties.  
21 But sometimes there's adjustments to the boundary lines of the  
22 maps for these basins. It's not that somebody's out there with  
23 a bulldozer changing the physical world. It's that they're  
24 recognizing this artificial construct that we've utilized to  
25 ease the administration burden for the State Engineer doesn't

1 match the physical reality. And so therefore, they've modified  
2 it. So they've been mapped.

3 Thank you, Your Honor.

4 THE COURT: Okay. Thank you. All right. So should  
5 we take maybe a short 10-minute break? Is that --

6 MR. ROBINSON: Perfect.

7 THE COURT: All right. Then I think next up is  
8 Georgia-Pacific. All right. Am I -- I think that's who it is.  
9 Yeah. I have Georgia-Pacific and then Lincoln Vidler.

10 (Proceedings recessed at 2:17 p.m., until 2:28 p.m.)

11 THE COURT: Okay. So the timer is ready. So  
12 whenever you're ready, Mr. Foletta.

13 MR. FOLETTA: Okay. Thank you, Your Honor.

14 **ARGUMENT FOR GEORGIA-PACIFIC AND REPUBLIC ENVIRONMENTAL**

15 MR. FOLETTA: Lucas Foletta for Georgia-Pacific and  
16 Republic.

17 I just wanted to make a couple comments -- this is  
18 going to be very brief -- in response to the Center for  
19 Biological Diversity's petition for judicial review and the  
20 brief they filed in support of that.

21 They make -- and the procedural kind of posture is a  
22 little awkward obviously because we all have our own petitions,  
23 and we're filing briefs against others, and both the --

24 THE COURT: I've never had anything like this before.

25 MR. FOLETTA: Yeah. Both the Center and we are

1 asking that the, you know, change be made to the order in  
2 effect as to the same issue. In fact, the pump limit, but, of  
3 course, they want the -- they think the number should be lower,  
4 and we think the number should be higher.

5           So, but they make two basic arguments. One is that  
6 the 8,000 acre-foot limit is not based on substantial evidence  
7 itself. And the other is that the State Engineer failed to  
8 appropriately assess the impact of the declining stream flows  
9 on the dace. So they're kind of connected, but as I read their  
10 brief, that's how they've articulated their position.

11           So with respect to the first issue, whether there's  
12 substantial evidence to support the 8,000 acre-foot limit.  
13 Obviously our position in our case is that there isn't  
14 substantial evidence to support the 8,000 acre-foot limit  
15 because we think the weight of the evidence is that the limit  
16 should be higher.

17           That said, assuming for the sake of this argument  
18 that the issue is really what CBD thinks about the limit, what  
19 I would do is just, one, I would incorporate by reference my  
20 comments from yesterday about, you know, our views about why  
21 there isn't substantial evidence to support even the 8,000  
22 acre-foot number, let alone a lower number. So, you know, we  
23 talked about just the fact that there was not a consensus about  
24 what the limit should be in the expert testimony, that there  
25 was a range of testimony as to what the number should be, from,

1 you know, like zero to up to 30,000 acre-feet and that the  
2 State Engineer had made -- commented on some limitations of the  
3 evidence that he had in front of him.

4 All those critiques are equally applicable to the  
5 position that the Center for Biological Diversity is taking.  
6 So that's kind of a long way of saying we also don't think that  
7 there's substantial evidence that could support the Center's  
8 position, right, that the number should be lower.

9 I would just add sort of one thing for the Court to  
10 consider, to put a cap on that, and I didn't talk about this  
11 before, but it has to do with Kane Springs. And I don't want  
12 my friends with an interest in Kane Springs to get mad at me  
13 because we are not advocating for the inclusion of Kane Springs  
14 in the Lower White River Flow System.

15 But if we're assuming that the order is -- if we're  
16 assuming that the order is legitimate in all respects other  
17 than those that the Center has raised, then what I would say is  
18 that one thing that stands out about the order and that -- and  
19 this is I think this is a criticism of the Center's position as  
20 well is that Kane Springs was added to the LWFS -- LWRFS in  
21 1309. It wasn't in there in 1303.

22 You recall the hearing was all about what we should  
23 do with respect to the Lower White River Flow System, and so --  
24 and people were commenting on the 1303 reports, right. So with  
25 respect to Kane Springs, there was a lot of evidence or

1 analysis of what the impact is of including Kane Springs in the  
2 basin. There was some. There was an SNWA report that I think  
3 concluded that Kane Springs could contribute about 4,000  
4 acre-feet annually a year to the system as a whole. That  
5 analysis is not reflected in either the State Engineer's  
6 position or the Center's position, which would suggest that the  
7 8,000 acre-foot number is lower than it should be if you assume  
8 that Kane Springs should be in the basin.

9 And so --

10 THE COURT: If you're doing the math that they  
11 should -- that they would be contributing 4,000, then that  
12 would raise the number.

13 MR. FOLETTA: It would raise the number. I'm not  
14 saying it raises it one to one, but the number, it supports the  
15 idea that the number is not too low and indeed should be  
16 higher. And so I don't -- this isn't reflected in the Center's  
17 analysis. And so again I think that analysis suffers from a  
18 lack of substantial evidence. And consequently if the State  
19 Engineer were to be reversed along those lines, I don't think  
20 that would be appropriate.

21 The other thing I wanted to address is the second  
22 issue, which is the State Engineer's assessment as the Center  
23 characterizes it, of the impact of declining stream flows on  
24 the dace. You know, we have talked about in our briefing -- I  
25 think we talked about a little bit the other day sort of the

1 position that the Fish and Wildlife Service had took in the  
2 hearing, and Ms. Peterson talked to you about that and showed  
3 you I think a transcript where there was a back and forth and  
4 some questions about whether they felt that there was a take  
5 occurring or not.

6           What our position is with respect to the Center's  
7 argument is that there really again isn't substantial evidence  
8 to support the notion that -- that the declining -- that there  
9 are declining stream flows and that that is the cause of one of  
10 the concerns about the dace. In other words, there are other  
11 things going on that undermine the assertion that it's all  
12 about kind of stream flows and that we should be looking closer  
13 at that, right.

14           So, for example, we had the memorandum of agreement  
15 that you've heard about multiple times. I'm not going to show  
16 it to you, but there's a page of the memorandum of agreement.  
17 It's at the record at 531.4041 I believe, and it's pretty  
18 interesting because it shows you how the parties to that  
19 agreement had come up with a rubric to kind of work through the  
20 dace issue. And so as the stream flows decline from 3.2 down  
21 to I think 2.7 CFS, the pumping also declines. That was the  
22 basic agreement. So stream flows are declining. Pumping  
23 declines as that happened, and that's the basic framework.

24           The interesting part about it is 3.2 was the starting  
25 point, not the endpoint, right. So you started at 3.2. And I

1 think the first requirement is that the parties confer with the  
2 Fish and Wildlife Service at that point when it gets to 3.2.  
3 As you go down to 2.7, it goes from 3.2 to 3.0 to 2.9 to 2.8 to  
4 2.7. Then pumping declines and some other things happen. But  
5 the point is the agreement doesn't reflect the notion that  
6 3.2 is the bare minimum -- 3.2 CFS is the bare minimum. Yet  
7 that is the number that I think the Center seizes on a bit and  
8 the order itself is focused around.

9           So I would agree I think -- somebody earlier talked  
10 about this because there was a question about kind of the scope  
11 of the agreement, to whom it applies and where it applies and  
12 so forth.

13           The point of the agreement from our perspective is  
14 that it undermines the assertion, the evidentiary sort of basis  
15 for the claim that 3.2 is the right number and that we've got  
16 to maintain that number. Because even the Fish and Wildlife  
17 Service entered into an agreement that said that's not the  
18 floor, right.

19           The CBD also I think overlooks the impact of invasive  
20 species on the tilapia -- not the tilapia, on the dace. And we  
21 talked about this in our brief, and this is another factor  
22 that's --

23           THE COURT: Is that the tilapia?

24           MR. FOLETTA: The tilapia is the invasive species.

25           So we talked about this in our briefing, but in

1 response to their position, the idea is that this is a nonflow  
2 related factor that is impacting the viability of the dace in  
3 connection, which there's evidence to support the notion that,  
4 again, things other than flow levels need to be addressed to  
5 ensure the integrity of the species.

6 And so the opinion that the center references you to  
7 in their briefing identifies conservation actions that don't  
8 relate to spring flows. That's the point here, including,  
9 quote, "The eradication of nonnative fish, such as tilapia,  
10 from the historic range of the Moapa dace." So this is the  
11 record at 47159.

12 At the hearing, the Fish and Wildlife Service  
13 introduced a white paper that showed that -- that talked about  
14 kind of the history of the dace in this area, and it said that,  
15 quote -- or excuse me, tilapia, quote, "invaded the Muddy River  
16 Springs area in 1995 and dramatically reduced the population of  
17 the dace." That's the record at 48721.

18 It further went on to say, quote,

19 Current knowledge of this system suggest  
20 that the negative interaction between tilapia  
21 and Moapa dace was so severe that the recovery  
22 of the species depended upon the removal of  
23 tilapia from the system, a major recovery action  
24 only recently completed in full.

25 That's the same page in the record.

1           So the point there is not only that there are other  
2 things affecting the dace, but that the mitigation efforts that  
3 have taken place to date to try to secure the viability of the  
4 dace are, according to this white paper, recently completed and  
5 that, you know, it takes time, the passage of time to  
6 understand the effects of the other things that have been done  
7 other than maintaining stream flows, let's say pursuant to the  
8 MOA, to understand what is happening with the dace, what needs  
9 to be done down the road, and consequently it undermines this  
10 kind of -- this conclusion that we should be looking closer and  
11 closer at stream flows to the exclusion of some of these other  
12 things.

13           With that, Your Honor, I do not have any further  
14 comments on the Center's (indiscernible). Thank you.

15           THE COURT: Thank you.

16                       (Pause in the proceedings.)

17           THE COURT: The floor is yours.

18           **ARGUMENT FOR LINCOLN COUNTY AND VIDLER WATER**

19           MS. PETERSON: Thank you, Your Honor. Karen Peterson  
20 from Allison MacKenzie law firm representing Vidler Water  
21 Company, and I also have Mr. Klomp here with me at the counsel  
22 table. He's going to -- we have a really short PowerPoint on  
23 this section, and I just wanted to explain that we did file an  
24 answering brief in response to --

25           THE COURT: You had an intervening brief, right.

1 MS. PETERSON: -- the Center for Biodiversity's. So  
2 I'm going to address some of the arguments that they made on  
3 Monday. I'm responding to arguments they made on Monday, but  
4 they made arguments today that were kind of covered the same  
5 things. So I am responding to Monday.

6 THE COURT: Okay.

7 MS. PETERSON: I just wanted you to know that.

8 So one of the things in the argument on Monday, the  
9 Center for Biological Diversity indicated and it kind of  
10 inferred that there might be an incidental take statement that  
11 Lincoln and Vidler might have. And so we just wanted to point  
12 out, and it is in the record, that we do have an incidental  
13 take statement that allows, if we meet certain criteria and  
14 there's take before that criteria -- take before the criteria,  
15 that we are allowed the incidental take, and it's set fourth --

16 First of all, Slide 1 shows the request that Lincoln  
17 and Vidler made for formal and informal consultation for the  
18 Kane Springs Valley project. And that is in the record there  
19 49906. And actually the U.S. Fish and Wildlife put in our  
20 complete biological opinion, which included the incidental take  
21 statement, into the record in 1309.

22 So if you could go to Slide 2.

23 And there, we're on page 37 of the exhibit, the U.S.  
24 Fish and Wildlife exhibit. And again the record on appeal  
25 citations are noted there, and the top paragraph indicates that

1 the, you know, after the U.S. Fish and Wildlife has done its  
2 review that our project is not likely to jeopardize the  
3 continued existence of the dace. The project could contribute  
4 to groundwater level declines and spring flow reductions;  
5 however, implementation of the projects conservation actions  
6 will minimize these impacts.

7 And then going -- and again, we didn't put -- I mean,  
8 it's -- I don't know how many pages, 50 or something like that.  
9 So obviously we didn't put anything in.

10 But then going down to the next paragraph, there was  
11 discussion about Section 9, and our biological opinion does  
12 reference Section 9 right there. And then the second part on  
13 the slide that we've highlighted indicates under the terms of  
14 Section 7 before and 762 of the act,

15 Taking that is incidental to and not  
16 intended as part of the agency action, and  
17 that's what I was just referring to, is not  
18 considered a prohibited taking provided that  
19 such action -- such taking, sorry, is in  
20 compliance with the terms and conditions of this  
21 incidental take statement.

22 And then if you could turn to the next slide, slide  
23 Number 3. Again, that's another section and the next page  
24 about the Moapa dace. And then it's interesting that it notes  
25 our biological opinion and our incidental take statement

1 acknowledges that the amount of groundwater pumping under our  
2 project is substantially smaller than the amount of pumping  
3 that could potentially occur under the Order 1169 pumping.

4 And then again, it does allow that a small  
5 unquantifiable amount of take in the form of habitat loss would  
6 occur if the spring flows reach 3.0 CFS at the Warm Springs  
7 gage. And if they decrease below 3.0, the amount of the  
8 incidental take for this project would be exceeded for the  
9 Moapa dace.

10 So our stipulation that we have with the State  
11 Engineer that was filed with U.S. Fish and Wildlife to our  
12 applications, that has a trigger point of 3.2, but actually the  
13 incidental take statement allows a little bit lower.

14 And then do we have one more slide? Yeah.

15 And then this is the final determinations with regard  
16 to the effect of the take. So we just wanted to point that out  
17 to Your Honor.

18 And then we have put the citations to the record  
19 there.

20 So the other thing that we cited in our brief, and I  
21 again wanted to reiterate here is the *Mineral County versus*  
22 *Lyon County* case, and you've heard a lot about it today and/or  
23 Monday, but -- and the public interest that's being analyzed,  
24 and there seems to be an argument that public interest is  
25 supposed to be analyzed continually by the State Engineer, like

1 while we're holding our groundwater permits, and that's not at  
2 all what is supposed to occur with regard to the public  
3 interest determination that the State Engineer is supposed to  
4 make. It's supposed to be made at the beginning in the  
5 application process.

6 And, of course, then when the State Engineer grants  
7 any applications, those become vested property rights. They  
8 become adjudicated property rights, and that's under the  
9 Fillipini (phonetic) case and all that line of cases. And so  
10 there's not some kind of continuing obligation by the State  
11 Engineer to continually look at the public interest. That's  
12 exactly what *Mineral County* said is not supposed to happen  
13 because there's supposed to be certainty with regard to water  
14 rights.

15 And again, we've cited in our briefs with regard to  
16 the *Mineral County* case the Nevada Legislature has enacted a  
17 comprehensive statutory scheme outlined in NRS Chapters 532,  
18 533 and 534 that regulate the procedures by which water rights  
19 may be acquired, changed or lost.

20 And the Nevada Supreme Court goes on to say in  
21 *Mineral County versus Lyon County* the statutory scheme in  
22 Nevada therefore expressly prohibits reallocating adjudicated  
23 water rights that have not been abandoned, forfeited or  
24 otherwise lost pursuant to an express statutory provision.

25 And finally Nevada's comprehensive statutes are

1 already consistent with the public trust doctrine because the  
2 statutes both require that water allocations be based on public  
3 interest and that the allocation satisfy all of the elements to  
4 safeguard public trust property.

5           There's no authority for the State Engineer to  
6 create -- based on that, we don't think there's any authority  
7 for the State Engineer to create any new procedures for the  
8 public trust which are not authorized by the statutes.

9           And the other thing I also wanted to note about the  
10 biological opinion, turning back to that, is that it is an  
11 approval that's in place that again provides some certainty to  
12 water right holders. We know where we stand. We know what the  
13 rules are with regard to the Moapa dace and what the U.S. Fish  
14 and Wildlife has allowed us to pump with our mitigation  
15 procedures in place so that we are not impacting the Moapa  
16 dace.

17           And again, that provides some certainty to water  
18 right holders. We know what's going to happen, not like  
19 something here where the State Engineer says, oh, no, the State  
20 may be liable for a take, and therefore, Lincoln and Vidler,  
21 you're not going to be able to use your water rights anymore  
22 because I'm going to throw you -- I'm going to throw Kane  
23 Springs into the Lower White River Flow System.

24           The other brief that we filed, and answering brief  
25 that we filed had to do with Southern Nevada Water Authority

1 and Moapa Valley irrigation company -- Muddy Valley Irrigation  
2 Company. I'm sorry.

3 And we -- as we put in our brief, we disagreed with  
4 the calculations of the predevelopment flows. We disagreed  
5 with the calculations of the irrigated acreage that SNWA holds.  
6 We disagreed with their quantifications of their water rights  
7 that they hold or their ICS credits that they're claiming.

8 We also argued that the State Engineer did not modify  
9 the Muddy River Decree under Order 1309 and did not modify  
10 SNWA's water rights or didn't modify Muddy Valley Irrigation  
11 Company's water rights, and there's been arguments made to the  
12 Court about this Court being, you know, the decree court. And  
13 that makes me a little nervous because while the Eighth  
14 Judicial District Court is the decree court now, this is a  
15 petition for judicial review of Order 1309. And if there's any  
16 interpretations of the decree or any kind of enforcement of the  
17 decree, that needs to be done in the proceeding where all of  
18 the water right holders in the decree have notice and are  
19 entitled to participate.

20 And so again, I get a little concerned that we're  
21 going to go outside the realm of, you know, a petition for  
22 judicial review by the Court somehow -- I interpret the relief  
23 that they're asking is that the Court interpret the decree in  
24 this proceeding, and I'm not sure that that's appropriate.

25 The State Engineer, what the State Engineer did in

1 Order 1309 is indicated that all the water right holders under  
2 the decree are getting their water. That's what he was talking  
3 about in the paragraphs that they have appealed. And the State  
4 Engineer under the decree is the watermaster for that decree.  
5 And the decree -- it's in the record under the Muddy River  
6 Decree, and it's at the record on appeal at 33.793, which  
7 indicates that there's going to be a watermaster for this  
8 decree, and the State Engineer is going to approve that  
9 watermaster. And actually, as it stands today, the State  
10 Engineer is the watermaster of the decree.

11 THE COURT: So that's like an actual term of art,  
12 watermaster?

13 MS. PETERSON: Yeah. Yeah.

14 THE COURT: Okay.

15 MS. PETERSON: And so what the watermaster does, and  
16 again, this is in the decree, and it's at page 33793, that the  
17 watermaster under the decree supervises, controls and regulates  
18 the distribution of the water.

19 And again, the watermaster doesn't necessarily have  
20 to be the State Engineer, but in this case for this decree, the  
21 watermaster is the State Engineer. So the watermaster knows  
22 that the water is being delivered, and everybody is getting  
23 their water because his office is supervising, controlling and  
24 regulating the distribution of the waters of the decree.

25 And so I guess -- and I think you picked up on it,

1 that it is an order and a judgment and a decree of the Court.  
2 And again, that's in the Muddy River Decree. It's in the  
3 record at 33771. And the Muddy River Decree also, you know, it  
4 orders, adjudged and decrees. It uses those words. It's a  
5 judgment of the Court. And that's at 33786.

6 So again, if there's any modification or  
7 interpretation or enforcement, I mean, that needs to be done by  
8 the decree court I'm going to call it, and again, everybody has  
9 to have notice of that under the decree.

10 And with regard to this enforcement of the decree, in  
11 *U.S. versus Orr Ditch Company*, it's 600 F.3d 1152. It's a 2010  
12 case, and it's a federal case because it involved a federal  
13 decree, but it was a case in which the surface water right  
14 holder was contending that groundwater rights that had been  
15 granted by the State Engineer under state law interfered with  
16 the federal decree. And the federal decree court said that the  
17 decree court did have jurisdiction to consider those claims.

18 And so I just want to point out that if there's any  
19 enforcement that needs to be done of the decree, that's brought  
20 in the decree court. It's not brought in front of the State  
21 Engineer because we're talking about enforcing a judgment  
22 that's been entered by a court of law. So that would be the  
23 place to go if there's any enforcement that needs to be done  
24 under the decree.

25 And the other thing I wanted to point out is that if

1 there's claims of impairment under the decree, you know, the  
2 Muddy Valley Irrigation Company needs to go to court -- or  
3 SNWA, they need to go to court. And it's not like you just  
4 stop pumping in the -- what they're contending 1100 square  
5 miles of potential water decline. I mean, what you have to do  
6 is -- because you're impacting somebody's property rights. I  
7 mean, you have to prove that their pumping impacts your water  
8 rights. That's what you do. So that would be what would have  
9 to be done in the District Court, not any way in this  
10 proceeding.

11           So and then the other thing I wanted to point out,  
12 and there was a slide in the Center opening, is that the slide  
13 that indicated that SNWA's report that after the 1169 pump  
14 tests, but that there where no water level declines or no  
15 discernible impacts from pumping north of that Kane Springs  
16 wash fault.

17           And I also wanted to let you know that Muddy Valley  
18 Irrigation Company adopted all of the studies of the Southern  
19 Nevada Water Authority in the proceedings below in 1309. And  
20 so if they adopted all the studies and joined in on all of the  
21 studies that the SNWA submitted, that they would also concur in  
22 those opinions that there is no discernible impact from  
23 pumping, you know, north of that -- north and west, whatever  
24 was on that slide of Kane Springs wash fault.

25           So and I know we heard just recently that they're not

1 saying there can't be any pumping, but I heard on Monday that  
2 any pumping in the Lower White River Flow System affects the  
3 Springs. That's what I heard on Monday. So.

4 And I also heard on Monday from Muddy Valley  
5 Irrigation Company that one of the objects of this proceeding  
6 was to return the Muddy River flows to predevelopment flows,  
7 and I just want to point out that when you look in Order 1303  
8 as to what the scope of this proceeding was, it was not to  
9 return Muddy River flows to predevelopment flows. That's not  
10 one of the questions that the State Engineer asked everybody to  
11 address in 1303. Remember, those were the five questions. One  
12 was the boundaries, how much water can be pumped, can you move  
13 water between the carbonate and the alluvium. So there was --  
14 I mean, this proceeding is not about returning Muddy River  
15 flows to predevelopment flows, and --

16 THE COURT: When you're talking about this  
17 proceeding, this proceeding in this Court or the proceeding  
18 that was -- that --

19 MS. PETERSON: 1309.

20 THE COURT: 1309. Okay.

21 MS. PETERSON: That -- I mean, the five --

22 THE COURT: Whatever precipitated 1309, that  
23 proceeding?

24 MS. PETERSON: The four specific matters that we were  
25 supposed to address in 1309 -- well, from Interim Order 1303,

1 1303 hearing, which resulted in Order 1309 where the geographic  
2 boundary of the Lower White River Flow System, aquifer recovery  
3 subsequent to the Order 1169 aquifer tests, long-term annual  
4 quantity and location of groundwater that may be pumped in the  
5 Lower White River Flow System and the effect of movement of  
6 water rights between the alluvial and carbonate wells within  
7 the Lower White River Flow System.

8 And I don't see in there that we're supposed to  
9 return the Muddy River flows to predevelopment flows.

10 And again, as I've indicated in our briefs, we  
11 disagree with what the level of those flows are.

12 And I'm very concerned -- this is my last point --  
13 that Mr. Dotson asked you, as his request for relief to affirm  
14 that predevelopment flows were equal to 33,900 acre-feet  
15 annually, and he was taking that from Order 1309. And he asked  
16 you to affirm that the river flow has flowed 13 -- 30,600  
17 acre-feet since 2015. I think the average river flow was  
18 30,600 acre-feet since 2015. And I have two problems with  
19 that.

20 Number one is, he's asking you to affirm parts of  
21 Order 1309 that they're appealing. Those are the specific  
22 paragraphs. They're pages 60 and 61 of Order 1309. They're  
23 found at the record on appeal at pages 61 and 62, and those are  
24 the exact paragraphs that they're appealing. And yet they want  
25 you to affirm those factual matters.

1 He's asking you to affirm those factual matters in  
2 this proceeding. And the reason he wants you to do that is so  
3 that if there is a Phase 2 in this proceeding and we have to  
4 determine what conflicts are, there's already going to be a  
5 finding by this Court that the predevelopment flows of the  
6 Muddy River were 33,900 acre-feet and that the flows since 2015  
7 are 30,600. So they're already going to have their conflict  
8 determination made because they keep on contending that they've  
9 lost 3,300 acre-feet -- 3,300 acre-feet since 2015. And that's  
10 going to be the law of the case, and that's going to go into  
11 Phase 2, and that is not appropriate, and that is scary. So  
12 you, please, cannot do that.

13 THE COURT: I can hear the desperation in your voice.

14 MS. PETERSON: It's -- it's not right.

15 So that's all I have. Thank you.

16 THE COURT: Okay. Thank you.

17 Mr. Klomp.

18 MR. KLOMP: I join in Ms. Peterson's --

19 THE COURT: Oh, are you -- is that everything?

20 MR. KLOMP: Yeah. We were sort of together.

21 THE COURT: Okay. That's fine.

22 So then now we are going to -- there were five.

23 MR. KLOMP: One quick matter, Your Honor.

24 THE COURT: Yes.

25 MR. KLOMP: There's a thumb drive right here, and I

1 don't know that somebody.

2 UNIDENTIFIED SPEAKER: I think that's Mr. Taggart's.

3 THE COURT: Okay. Mr. Taggart, do you want to take a  
4 minute before you start?

5 (Pause in the proceedings.)

6 MR. TAGGART: No, I can go now.

7 (Pause in the proceedings.)

8 MR. TAGGART: Okay. We're good.

9 THE COURT: So you'll have a copy of this for us?

10 MR. TAGGART: Oh, I was going to cover that. No,  
11 this is just a document from the record on appeal. I was just  
12 going to show this as a demonstrative.

13 THE COURT: All right.

14 MR. TAGGART: And I will cite to it as just from the  
15 record on appeal.

16 THE COURT: That's fine.

17 MR. TAGGART: All right. So I will not have a  
18 third -- or I don't know how many it would be.

19 THE COURT: PowerPoint or --

20 MR. TAGGART: A PowerPoint for this reply.

21 THE COURT: Okay. Thank you.

22 MR. TAGGART: So that 17 minutes means I talked for  
23 three hours and 45 minutes already?

24 THE COURT: Yes. Impressive that you haven't lost  
25 your voice.

1 (Pause in the proceedings.)

2 **ARGUMENT FOR SNWA AND LVVWD**

3 MR. TAGGART: So if it pleases the Court, again, Paul  
4 Taggart on behalf of the Water District and the authority.

5 A couple housekeeping matters. One, there was a  
6 discussion earlier, we've talked at length about the original  
7 map that had the -- the original map that mapped the basins,  
8 and we talked about it being in 1968. I'm alerted by my  
9 associate that that map and that report is not in the record.  
10 We cited to a 1968 USGS report when we talked about that map.  
11 So I just want to be clear, we cited to 9348 through 9422 of  
12 the ROA, and that's actually a 1968 USGS report about  
13 something, not the map. So we don't have a map of the  
14 original -- the original locations of the basins, but what we  
15 have is the 1971 map that I showed this morning, which is part  
16 of Waterford, Nevada. So that's just a housekeeping thing.

17 The other thing is that I thought we cited to  
18 (indiscernible)'s rulings. I've told you that this morning  
19 that we did in our briefs, but I'm told we didn't. So I  
20 apologize for that.

21 The -- I'll be brief since I only have a few minutes  
22 anyway. A couple of things. I'm here now to reply to  
23 arguments made against our arguments regarding the conflicts  
24 determination by the State Engineer. And I'll just remind the  
25 Court that there was clear statements made at the prehearing

JD Reporting, Inc.

1 conference about what would and would not be ruled upon, and we  
2 think this fell within that, and I think Your Honor recalls  
3 that when I read that transcript into the record.

4           So a couple things have been said. One, no one has  
5 filed any complaint about the water. We have. So that's an  
6 inaccurate statement. A number of inaccurate statements have  
7 been made about our position here.

8           One, we did file a notice of alleged violation. It's  
9 up on the screen, and it's in the record at pages 48131 and  
10 48132. We attached to this document the same analysis that we  
11 talked about earlier, the depletion analysis that our experts  
12 completed about the amount of ICS credits that were not  
13 generated because of captured water. We included all that  
14 information and filed that with the State Engineer. And there  
15 is a file stamp on there that's dated July 3rd, 2019.

16           And so I agree that conflicts requires an evidentiary  
17 hearing. We didn't get to have that, but I also struggle to  
18 understand how were supposed to wait for that. If we file  
19 something with the State Engineer and he doesn't consider it,  
20 how long are we supposed wait?

21           When we filed this with the Court, this petition for  
22 judicial review, and again, completely disagree with my  
23 colleague about this, we invoked the jurisdiction of the decree  
24 court, and it should be scary because water has been taken from  
25 decreed right owners, and there's nothing in this action of

1 invoking the power of the decree court that requires notice to  
2 all decree owners. This is an enforcement action under the  
3 decree. And there's been --

4 THE COURT: Well, let me ask then, is an enforcement  
5 action proper in a PJR?

6 MR. TAGGART: Yes. When that case that we've been  
7 citing to, *Orr Ditch*, when it was filed, the -- you know,  
8 that's what they were asking, that the application be denied so  
9 that they wouldn't have an impact to their water. We've asked  
10 that the Court simply interpret the decree, and that is not  
11 modifying the decree. You know, I've been through having to  
12 name all the owners in a decree, and you do that when you amend  
13 a decree, not when you ask for a decree to be enforced, not  
14 when you ask for a decree to be interpreted by the decree  
15 court.

16 The parties to the alleged action have to be part of  
17 the case. All of those were part of this -- I believe all of  
18 those have been noticed, and all of those are here.

19 So our PJR specifically states that, you know, the  
20 subject matter of this appeal involves decreed waters of the  
21 Muddy River Decree, and so in our view we've done that.

22 We're not asking, again, as you know, we're not  
23 asking you to adjudicate the conflicts question. We'd rather  
24 not have that happen here. We'd rather you strike the language  
25 in the order and have that done properly in an evidentiary

1 hearing.

2 So the issue of whether it's proper here or not is  
3 probably academic. The key is that we should have that  
4 evidentiary hearing initially.

5 Just because the State Engineer is a water  
6 commissioner or a watermaster for this Court doesn't mean we're  
7 getting our water. And that's the whole point of some of the  
8 arguments that we've made.

9 So I think that the easiest thing for the Court is to  
10 understand the scope issue, to -- and the fact that so much of  
11 what the State Engineer relied upon in his analysis on  
12 conflicts is not available in the record for folks to see and  
13 understand how it was done. So for those reasons, it's  
14 fundamentally unfair to allow that conflict finding to stand.  
15 And for that reason, we ask that you reverse that, but uphold  
16 the remainder of 1303, and we've -- and that's the extent of  
17 our argument.

18 And I am done.

19 THE COURT: Okay.

20 MR. TAGGART: I will provide you with the PowerPoints  
21 tomorrow morning.

22 THE COURT: Okay.

23 MR. TAGGART: And provide those to all of the parties  
24 in the case as well. Thank you.

25 THE COURT: Thank you.

1 THE CLERK: Is it just the PowerPoints (inaudible)?

2 MR. TAGGART: Yeah, it'll just be the ones that I  
3 spoke about already. All right.

4 THE CLERK: Okay. Because you've given me some.

5 MR. TAGGART: And are we doing that as --

6 Yes.

7 THE CLERK: I just don't want to --

8 MR. TAGGART: I think I've given you two of three.

9 THE CLERK: Okay. So it's just this last one that  
10 you --

11 MR. TAGGART: But are we doing it all as one exhibit  
12 and adding to it or --

13 THE CLERK: No. I'm putting them in the order as you  
14 guys go. So when they get it on appeal they can (inaudible).

15 THE COURT: Okay. So you have a number already for  
16 when I gave it to you?

17 THE CLERK: I do. So yours will be 14.

18 MR. TAGGART: Okay. Thank you.

19 Thank you, Your Honor.

20 (Pause in the proceedings.)

21 THE CLERK: All right. So this you're not giving?

22 MR. TAGGART: No, not this.

23 THE COURT: No, this is just on the record on appeal.

24 So it's a --

25 UNIDENTIFIED SPEAKER: She kind of needs them for

1 her --

2 THE COURT: Oh, you need it. Well, if you want to go  
3 through --

4 MR. TAGGART: Well, I can provide you with this.

5 THE COURT: Okay.

6 MR. TAGGART: It's easy. It's only two pages. I'll  
7 get a copy made.

8 THE CLERK: So you gave one -- you gave me two  
9 yesterday. No, I think I only got --

10 MR. TAGGART: Right. On Monday I would have started  
11 and given you one regarding conflicts.

12 THE CLERK: Right. Let me find my (inaudible). So  
13 right now I have -- I have one for Monday.

14 MR. TAGGART: Yes.

15 THE CLERK: And then one that you gave last night.

16 MR. TAGGART: Yes.

17 UNIDENTIFIED SPEAKER: Your Honor, are we in recess?

18 THE COURT: We're -- I guess we're sort of in --  
19 informally. Do you guys want to take a formal recess?

20 UNIDENTIFIED SPEAKER: Yeah.

21 THE COURT: Okay. Why don't we recess for five  
22 minutes and come back at --

23 UNIDENTIFIED SPEAKER: I just wasn't sure.

24 (Proceedings recessed at 3:10 p.m., until 3:20 p.m.)

25 THE COURT: Okay. Whenever you're ready.

1 or interest in the term area in the statute. And if you go to  
2 the second page of 1303, it's very clear how the State Engineer  
3 wants to implement the word area.

4 Now, there are not seven basins at stake here that's  
5 being swept into the big bathtub called the mega basins. There  
6 are five, and then there are two of the basins that are  
7 designated as areas because they are not completely designated  
8 basins, only an area within the basin is part of this case.  
9 And that's Black Mountain, and that's I think the Warm Springs,  
10 and that's why throughout 1303, 1309 and the various petitions  
11 that the word area is used, and we'll get into that in a little  
12 bit more detail in the statute.

13 So the Black Mountain Area hydrographic basin is  
14 discussed in 1303. Garnet Valley hydrographic basin is  
15 discussed in 1303. The California Wash hydrographic basin was  
16 designated pursuant to 534.030. Hidden Valley hydrographic  
17 basin was designated. So the Muddy River Springs area was  
18 partially, partially designated.

19 So what we have, Your Honor, on 1303 is partial  
20 designations of areas within a basin, and then the other basins  
21 which are identified as designated except, of course, Kane  
22 Springs is not identified as a designated basin, nor can it be  
23 because it is not.

24 1309 on the other hand, Your Honor, does the same  
25 thing. It identifies the Black Mountain area hydrographic

1 basin, area being the operative word. It's an area within a  
2 basin, and that's how the State Engineer has used the term.

3 But more importantly, the order says this: The  
4 various basins, a northwest portion of the Black Mountain area  
5 as described in this order is hereby delineated. Not  
6 designated, delineated. So my partner Ms. Winston is going to  
7 get into that in a little bit more detail. But what we've lost  
8 sight of over the last -- what's it been, three weeks?

9 THE COURT: It feels like it, although we've been  
10 moving along quite quickly. So --

11 MR. ROBISON: We've lost sight of this simple word  
12 the engineer and the legislature and the courts have used for  
13 years, and that's the word basin.

14 The overlay for our closing argument in rebuttal goes  
15 back to the Pyramid Lake Indian tribe versus Ricci case.

16 First,

17 It is undisputed that Nevada's groundwater  
18 resources have long been managed on a perennial  
19 yield basis for the entire hydrographic basin.  
20 Such system is specifically contemplated by the  
21 Nevada groundwater code, which provides the  
22 State Engineer to take various acts on a basin  
23 wide basis.

24 They cite for that proposition 534.034, but that's  
25 been argued much differently than as defined and described in

1 this decision by the State Engineer himself.

2 Method of designation for groundwater basin, see  
3 534.035. Establishment of groundwater boards in an individual  
4 basin, see 534.050. Permits required before a well may be  
5 dried -- drilled in a designated groundwater basin.

6 It is in fact this authority that the State Engineer  
7 has identified 235 groundwater basins, and there they are, and  
8 the word used in this absolutely clear language by the State  
9 Engineer is that the authority of the engineer to identify  
10 these basins. And as we have said, there has been so much  
11 reliance on the definition given to the word basin by the State  
12 Engineer himself over decades of all users, courts and  
13 legislature.

14 Finally, the State Engineer says this:

15 It is patently reasonable for the State  
16 Engineer to manage these basins in a manner  
17 consistent with statutory authority. This  
18 approach is also reasonable for the reason that  
19 managing a basin on the base of its perennial  
20 yield requires and ensures that the basin will  
21 remain in balance.

22 We always have to come back to this proposition in  
23 this case, Your Honor, that there was a fault, (indiscernible)  
24 fault. Over here is the legal issue, statutory authority to  
25 eradicate basins and make them a basin, which we're calling the

1 mega basin. Statutory authority, it stops. If there is no  
2 statutory authority and the State Engineer has exceeded the  
3 legislative authority, we don't get to the other side of the  
4 fault, which is the science. And I'm now going to yield the  
5 floor to Ms. Winston and be back with you in a little bit, Your  
6 Honor.

7 THE COURT: Okay. Thank you.

8 **ARGUMENT FOR COYOTE SPRINGS**

9 MS. WINSTON: Thank you, Your Honor. Hannah Winston  
10 on behalf of CSI.

11 I'm going to address three issues in this argument.  
12 The first is the use of the terms designate or designation  
13 versus delineation. The second issue is whether the creation  
14 of the mega basin or combining multiple basins into one,  
15 whether that is a legal question or a factual one. The third  
16 issue I'm going to address is this idea of conjunctive  
17 management versus joint administration or joint management.

18 I'm going to walk through the statutes on designating  
19 basins, so I really welcome the Court, encourage the Court to  
20 ask any questions as we go through them.

21 Designation is a term or designate is a term that is  
22 used throughout NRS Chapter 534. The word delineate is not  
23 used in NRS Chapter 34 or NRS Chapter 33. That is a State  
24 Engineer word.

25 THE COURT: Do you mean 534?

1 MS. WINSTON: Either one. 534 --

2 THE COURT: I only heard you say 34 and 33. So, but  
3 you mean 533 and 534?

4 MS. WINSTON: Correct. Yes.

5 THE COURT: Okay.

6 MS. WINSTON: Sorry about that, Your Honor.

7 So the first statute I'd like to pull up is  
8 NRS 534.011, and these are just from the statutes. It's not  
9 necessarily an exhibit.

10 NRS 534.011 is important. It's part of the  
11 definitions for the chapter, and it provides that an area of  
12 active management means an area in which the State Engineer  
13 is -- I'm going to sum it up so I'm not just reading it to you  
14 because you can read -- it's an area where a basin needs  
15 particularly close attention. And Subsection 2 is important  
16 because it says that that area has also received a designation  
17 under NRS 534.030.

18 So now, Mark, if we could go to that statute,  
19 NRS 534.030.

20 NRS 534.030 provides the process for designating a  
21 basin. And as we just saw in NRS 534.011, designating a basin  
22 means we're designating it for additional or particular  
23 management. So it's an area of active management. That's what  
24 we mean when we say we're designating a basin.

25 So there's two ways to initiate the process to

1 designate a basin for more management. Either under  
2 Subsection 1, the petitioners or water right holders in a basin  
3 can actually petition the State Engineer and say we need you to  
4 come in and please designate.

5 In the absence of a petition, we look at  
6 Subsection 2. The State Engineer can actually initiate this  
7 proceeding himself. And, of course, we've seen this before.  
8 There's multiple basins. And what you can see on the -- I  
9 believe this is CSI's Exhibit 2.

10 MR. ROBISON: I believe so.

11 MS. WINSTON: The basins that are shown in gray are  
12 ones that have gone through this process and been designated.

13 Important to this case is that Kane Springs Valley  
14 has not gone through that process. And to figure out what the  
15 process is, we look at 534.030. So if the State Engineer  
16 thinks that a basin needs to have this additional management,  
17 it needs to be designated, then the State Engineer can hold a  
18 hearing. And important to this case is Subsection (2)(a) and  
19 (2)(b). You'll see in (2)(a) that the State Engineer shall  
20 hold a public hearing within the basin. Okay. So when we're  
21 designating a basin, we're not designating seven basins at one  
22 time. We're designating a basin in that or a portion therein.  
23 And that basin -- or the hearing has to be held within the  
24 basin. It makes sense.

25 THE COURT: Let me ask you a question. So under the

1 statutory framework that we have, is it your position that you  
2 do not dispute the fact that the State Engineer can manage the  
3 basins with an eye towards how those -- how the water flows  
4 within those basins, but if the dispute is him changing those  
5 six basins and delineating it into one basin?

6 MS. WINSTON: That's correct.

7 And what's important about your question, Your Honor,  
8 is that that's -- that's really the issue here. How do you  
9 manage seven basins together if the science shows that they're  
10 related or there's a hydraulic connection between basins? Is  
11 the answer to erase the boundary lines between them that have  
12 been established since 1968? No. We have tools to manage  
13 them. So we start with 534.030. This statute works in  
14 conjunction with NRS 534.120 and .110. So 534.030 provides the  
15 process to designate, and NRS 534.110 and 534.120 provides the  
16 State Engineer with the tools to implement that management.

17 So I want to pull up NRS 534.110, please. And I'd  
18 like to go to Subsection 6, which I think is important to the  
19 Court's question as well. Because if the State Engineer is  
20 managing basins by the basin, sees that there is a hydraulic  
21 connection, what can he do? Well, if the State Engineer  
22 determines after following the proper steps that an  
23 investigation is warranted, curtailment is warranted, then the  
24 State Engineer can implement curtailment, but only in a basin,  
25 right, not amongst several basins together.

1           And the curtailment has to be restricted to conform  
2 to priority rights, not amongst seven basins, but in the basin  
3 because curtailment only happens by the basin.

4           THE COURT: So let me ask. So if the State Engineer  
5 is looking at how each of the basins are interconnected and how  
6 drawing in certain basins affect other basins, is it your  
7 contention then that the Nevada State Engineer cannot consider  
8 the senior surface water rights of other parties in other  
9 basins and how that is affected by junior groundwater right  
10 holders in connecting these things?

11           MS. WINSTON: No. I believe that the State Engineer  
12 does have to consider groundwater and surface flow rights.

13           THE COURT: Even if it's different, but potentially  
14 basins that affect each other?

15           MS. WINSTON: Right. So this -- it's actually the  
16 third issue I was going to address, but I'll just jump right  
17 in.

18           THE COURT: Okay.

19           MS. WINSTON: There's been a lot of discussion about  
20 conjunctive management versus joint administration or joint  
21 management.

22           THE COURT: And I guess for me there's a difference  
23 between when you're talking -- when you're defining joint  
24 management, if you're talking about joining together several  
25 basins as one versus jointly managing, you know, six or seven

1 separate basins.

2 MS. WINSTON: Correct. So the word joint management  
3 or joint administration, those terms, those are not in  
4 NRS Chapter 533 or 534. Those are State Engineer terms, okay.  
5 So to the State Engineer, apparently since 1309, joint  
6 management or joint administration means literally combining  
7 seven basins, erasing their boundaries and viewing that as one  
8 hydrographic basin. That is how the State Engineer views joint  
9 management.

10 My position is the State Engineer can do -- consider  
11 the effect of pumping between multiple basins without combining  
12 the basins into one. He can still implement the tools that are  
13 available to him without erasing those boundaries because it  
14 has, as we briefed, and as Mr. Robison is going to address,  
15 that has very severe consequences.

16 If the State Engineer is just managing seven basins  
17 and this interconnectedness between the basins, then he can  
18 still curtail by the basin if he maintains the boundaries  
19 between the established basins. He can still curtail and  
20 respect and give priority to priority rights in each basin  
21 while being mindful of the impact of the connection of water  
22 between the basins.

23 Where I think that this conjunctive management issue  
24 has gotten a bit confused is conjunctive management; that word  
25 is in the statute, right. It's in the declaration of

1 legislative policy. And let's bring that up. That's at  
2 NRS 533.024.

3 UNIDENTIFIED SPEAKER: I didn't down load 533. I  
4 downloaded 532.

5 MS. WINSTON: Oh, okay. Then we remember what it is  
6 says. We read it so many times.

7 THE COURT: Okay.

8 MS. WINSTON: So in that one it says it's the policy  
9 of the State of Nevada to conjunctively manage water regardless  
10 of the source. Source means groundwater or surface flows. And  
11 there was some argument today that some petitioners have taken  
12 a position that this is the first time that the State Engineer  
13 has ever conjunctively managed groundwater and surface flows.  
14 That is not CSI's position. Of course the State Engineer has  
15 to disc consider decreed rights. That is prior appropriation.  
16 That's reflected in the statutory scheme. The issue of first  
17 impression is combining basins to make them one. That is the  
18 issue of first impression.

19 So the State Engineer can assess the effective  
20 groundwater pumping on surface flows. The State Engineer can  
21 look at the interconnectedness of basins and manage each basin  
22 by the basin. That's how the statutes are written. That is  
23 how it's been done historically. But the State Engineer cannot  
24 combine those basins into one. That is where CSI takes issue.

25 I'd like to pull up NRS 534.120. So I mentioned

1 earlier that 534.030 provides the process to designate a basin.  
2 NRS 534.120 provides the tools: How do you manage a basin that  
3 has been designated? And this is the provision of the statute  
4 that you brought up to Mr. Robison in his opening argument.

5           So I think now we have a better understanding.  
6 Within an area that has been designated by the State Engineer  
7 as provided for in this chapter, so that means as an area of  
8 active management. There's also critical management areas that  
9 can be defined. And as SNWA articulated earlier, only Diamond  
10 Valley has that actual critical management area designation.

11           If we look through the rest of the statute, there are  
12 different tools available. So in Subsection -- you don't have  
13 to zoom in -- but in Subsection 2, the State Engineer can  
14 require periodical statements of water elevations. The State  
15 Engineer can determine whether there are preferred uses for the  
16 water. The State Engineer can issue temporary permits. The  
17 State Engineer could temporarily stop pumping in certain areas.  
18 So there's different things that the State Engineer can do in  
19 those designated basins that are part of his tools in his  
20 toolbox when a basin has been designated.

21           Part of the problem with the State Engineer or some  
22 other petitioners in trying to justify 1309 as having occurred  
23 under these statutes for designating basins is that Kane  
24 Springs has never gone through the designation process. So the  
25 State Engineer cannot use these tools in Kane Springs Valley.

1           And I mentioned earlier 1169 was issued under  
2 NRS 533.368, which is to conduct an investigation to see if  
3 there's additional water for appropriation, not to assess the  
4 boundaries, not to decide that these basins should be combined  
5 and treated as one. That's not the purpose of 1169. Because  
6 1309 comes from the pump test and everything that occurred  
7 after, 1309 cannot all of a sudden stem or be rooted in  
8 534.120, .110 or .030. That's just not where we are, and it's  
9 just sort of a after-the-fact justification to try and make  
10 1309 lawful.

11           Now I want to talk about the State Engineer's use of  
12 the word delineate.

13           So in Order 1309, the State Engineer says that he is  
14 delineating the Lower White River Flow System as that one  
15 hydrographic basin.

16           As I mentioned earlier, the word delineate is not in  
17 the statutes. That is the State Engineer's word. And when you  
18 talk about delineating, that's really creating, right. He's  
19 creating. He's determining that this is one basin.

20           After all of the argument that we've heard over the  
21 past couple of days, we still have not identified one statute  
22 that allows the State Engineer to determine, establish,  
23 redefine the basins. There's been a lot of discussion about  
24 the map that shows the 232 hydrographic basins. And that map,  
25 as we briefed, came from the Rush Report from 1968. The USGS

1 in conjunction with the State Engineer developed that map and  
2 established those 232 hydrographic basins.

3 If the State Engineer had authority to change those  
4 established basins, it would have to be in a statute, and the  
5 State Engineer has not identified any statute that would give  
6 him that authority.

7 There's also been a lot of discussion about what a  
8 basin is. The State Engineer in his answering brief almost  
9 feigns confusion as to what CSI means when they refer to the  
10 term basin. Obviously this is disingenuous given how water has  
11 been managed, how the basins has been referred to over the  
12 years.

13 The State Engineer has argued that nothing in  
14 Nevada's water law constrains the State Engineer's view of what  
15 a basin is. But what the State Engineer thinks a basin is is  
16 truly irrelevant. The legislature uses the word basin  
17 throughout the statutory scheme. And this is where I find it  
18 so striking that we have no statutory interpretation from the  
19 State Engineer to explain what a basin is or why the State  
20 Engineer alone somehow has authority to define what a basin is  
21 whenever he wants and on whatever terms he decides.

22 The State Engineer does not argue that the word is  
23 ambiguous. So we just start with the plain language. That is  
24 how statutory interpretation works. A basin is just a geologic  
25 feature. It's akin to a valley. It's a geologic feature

1 that's also a mountain. So mountain ranges get identified, and  
2 they get named, just like Nevada's basins do.

3 And what's interesting is the State Engineer's Water  
4 Words Dictionary actually defines Nevada basins. And it does  
5 so by referencing the basins that were established by the USGS  
6 in conjunction with the State Engineer. Those are the 232  
7 hydrographic basins.

8 Rather than actually go through any type of statutory  
9 interpretation or statutory analysis, the State Engineer just  
10 dismisses of it and says the legislature left it up to the  
11 State Engineer to determine what a basin is. That is not how  
12 statutory interpretation works. The State Engineer can only  
13 act where authorized to do so. There is no statute that says  
14 the State Engineer gets to decide what a basin is or what that  
15 term means.

16 The State Engineer is also dismissive of the fact  
17 that Coyote Springs looks at the fact that the legislature uses  
18 the term basin in a singular versus plural. That is a tool of  
19 statutory interpretation. We assume, the presumption is if the  
20 legislature says a basin, any basin, a particular basin or a  
21 portion thereof or a portion therein, that means one basin.  
22 The presumption is if the legislature wanted to reference  
23 multiple basins, then the legislature would have done so. And  
24 the State Engineer hasn't provided any authority or any  
25 explanation as to how you could possibly read the term a basin

1 as multiple basins. That would violate tools of statutory  
2 construction. That would violate the plain language of the  
3 statute.

4 The next issue that I want to address is the State  
5 Engineer's attempt to characterize the combining of multiple  
6 basins into one as a factual issue versus a legal issue.

7 So we know why the State Engineer wants it to be  
8 factual: Because more deference is given to factual findings.

9 The problem is the basins have been established since  
10 1968. As I referenced earlier, if there was an intention by  
11 the legislature to give the State Engineer the ability to  
12 change those basins, then it would have said so. It has not  
13 done that.

14 The second issue is that where the State Engineer is  
15 authorized to conduct factual investigations, which is now what  
16 he wants to characterize as 1309 constituting, that combining  
17 these basins into one hydrographic basin is a factual finding.  
18 If that were true, the legislature would still have to  
19 authorize that. So throughout the statutory scheme, we'll see  
20 where the State Engineer is authorized to conduct factual  
21 investigations.

22 We start with 1169. We saw it earlier. Under  
23 NRS 533.368, the State Engineer is authorized to conduct a  
24 study or investigation to see if additional water is available  
25 for appropriation. So that's a factual finding that is

1 expressly authorized by statute.

2 Another example, NRS 534.110, Subsection 6, that  
3 statute authorizes the State Engineer to conduct a study to  
4 determine if it's necessary to initiate curtailment  
5 proceedings.

6 So if, even if the determination of combining  
7 multiple basins into one, even if we could call that a factual  
8 determination, there still has to be statutory authorization to  
9 allow that to happen. And here there's no statute that says  
10 the State Engineer can conduct an investigation to change the  
11 basin boundaries or to combine multiple basins into one.

12 The last issue I told you I was going to address is  
13 this joint administration versus conjunctive management, and  
14 the one thing I wanted to show the Court.

15 And Mark, if you'll pull up NRS 532.167.

16 Under this statute, the legislature requires the  
17 State Engineer to develop a water budget for every basin in  
18 Nevada.

19 And we've talked a lot about water budgets, that that  
20 is a tool that the State Engineer can use to assess water in  
21 each basin. The State Engineer can assess whether those basins  
22 have a hydraulic connection, how they impact each other. And  
23 then the State Engineer can enter his rules and regulations  
24 where appropriate if he finds that there's a depletion of  
25 water.

1           And with that, I will pass it on to Mr. Herrema. I  
2 probably said that wrong. I call him Brad.

3                           **ARGUMENT FOR COYOTE SPRINGS**

4           MR. HERREMA: Good afternoon, Your Honor.

5           THE COURT: Good afternoon.

6           MR. HERREMA: Brad Herrema on behalf of CSI. I'm  
7 going to just hit a few highlights on the substantial evidence  
8 issues. I know you've heard a lot over the last almost three  
9 days here, not quite three weeks, but so I'll try to be brief.  
10 I appreciate the attention I know you've paid and the time you  
11 put into the briefing as well.

12                   Just kind of harkening back to what I talked about on  
13 Monday, it's clear, and I think it's become clear to you that  
14 1309 has put the Lower White River Flow System basins into a  
15 state of uncertainty.

16                   Mr. Taggart said, you know, it makes sense that the  
17 State Engineer would do this fact-finding process before policy  
18 setting. But it's not -- it's still not clear to me why the  
19 State Engineer felt that it needed to issue an order like 1309  
20 when it was finding facts unless, of course, the State Engineer  
21 wanted to have those validated either through the statute of  
22 limitations running or a process like this.

23                   One other thing I heard from both Mr. Taggart this  
24 morning and Mr. Dotson this afternoon, they both seized on this  
25 word segmentation that I used when I was talking on Monday to

1 sort of explain to the Court how I'm trying to wrap my head  
2 around what's happening here.

3           And they both have I think sort of challenged my  
4 argument in saying well, you're inconsistent because you've  
5 said that on the one hand that the State Engineer shouldn't  
6 segment this, but on the other hand you're saying what the  
7 State Engineer should do is look at this basin by basin and not  
8 combine these six, seven basins into one single basin. And  
9 that confuses the concept of what segmentation is.

10           The segmentation issue in California CEQA law,  
11 California Environmental Quality Act law, is breaking something  
12 up processwise into smaller pieces so that you don't ever have  
13 to look at the whole of it when the impacts of the whole might  
14 be -- might not be able to see the forest if you're only  
15 looking at the individual trees. And that's what the concern  
16 is here with breaking things up into 1309 as a single order  
17 with supposedly just fact-finding and then deferring a process,  
18 which we don't know what it will be. We don't know when it  
19 will be.

20           Mr. Bolotin said in his argument, you know, if things  
21 don't get figured out, then the State Engineer will have to  
22 start some process. And so we have this black cloud looming  
23 over all of our heads now because we don't know what the State  
24 Engineer is planning to do next, but he's sure trying really  
25 hard to make sure that these factual findings are approved.

1 THE COURT: So when you were referring to the  
2 segmentation, you're talking about dividing the fact-finding  
3 process from the determination of the conflicts of the  
4 different water right holders; is that correct?

5 MR. HERREMA: I'm talking about separating this  
6 ruling, this order on the fact-finding from whatever the  
7 process will be. We don't know. Some people have  
8 characterized it as the beginning of a curtailment process.  
9 Others have said, you know, maybe because of this black cloud  
10 over us people will have to work it out, and something, you  
11 know, a miracle will happen. I don't know what it will be, but  
12 that's the segmentation I'm talking about.

13 And the reason I brought it up on Monday and why I  
14 think it's part of the substantial evidence review is because  
15 we don't know what all of this is going to be used for. We  
16 can't tell if it's suitable for that purpose. And so how can  
17 the State Engineer claim that there's substantial evidence for  
18 findings that will support what, we don't know. That's the  
19 context of the segmentation argument.

20 I don't need to repeat the substantial evidence  
21 standards. They've been repeated many times over the past  
22 couple of days. I would just hit a couple real quickly.

23 Even where the issues involve technical or  
24 complex scientific issues, the State Engineer's  
25 orders must be sufficiently explained and

1 supported to allow for judicial review.

2 That's *Eureka County*.

3 And even under deferential substantial  
4 evidence review, Courts must not merely rubber  
5 stamp agency action. They must determine that  
6 the agency articulated a rational connection  
7 between the facts presented and its decision.

8 And so it's not enough for the State Engineer just to  
9 say this is what he's decided.

10 And then we talked a little bit the other day. I  
11 think it's been cleared up. The State Engineer himself views  
12 that the legislature has mandated that he use the best  
13 available science.

14 A couple more things in regard to the -- both the  
15 determination of a hydraulic connection and the State  
16 Engineer's reliance on the 1169 pump test and then I'll touch  
17 on the 8,000.

18 In regard to the reliance of the State Engineer on  
19 the 1169 pump test, Mr. Taggart stated that some folks have  
20 characterized the pump test as perhaps not well thought out.  
21 That certainly was not what my argument was. I think  
22 Ms. Winston has done an excellent job today of explaining what  
23 the genesis of that pump test was, what the statutory  
24 authorization that the State Engineer thought he was operating  
25 under was for that pump test. And I think that informs the

1 manner in which that pump test was constructed.

2           So if the pump test had been designed for other  
3 purposes, such as potential curtailment of existing rights as  
4 opposed to an investigation of what water might be available  
5 for additional appropriation, it may have been designed  
6 differently.

7           If the parties understood what the criteria were that  
8 the State Engineer was going to use for determining whether  
9 there was a close connection that justified merging these six,  
10 seven basins into a single basin, they also might have designed  
11 the pump test differently.

12           And just in regard to those criteria, I'm not going  
13 to walk through them. Mr. Taggart said CSI knew before it  
14 submitted its report and testimony to the State Engineer what  
15 those criteria were. That's absolutely not true. There's  
16 nowhere that -- that it's shown that the State Engineer had  
17 disclosed what those criteria were before 1309.

18           In regard to what the pump tests can and can't be  
19 used for, Mr. Bolotin brought yesterday his demonstrative  
20 exhibit here with -- we've got multiple. They did their  
21 multiplying.

22           THE COURT: I can't see that one.

23           MR. HERREMA: He brought his demonstrative here with  
24 a handful of hydrographs shown. I'd like to just clarify.  
25 This has eight well hydrographs on it, two spring flow

1 hydrographs. There were a total of 79 wells in alluvial or  
2 carbonate aquifers that were monitored as part of that 1169  
3 pump test. And they had well data collected either  
4 continuously, monthly, quarterly. There were also a total of  
5 10 surface water gauging sites included in the monitoring that  
6 worked so.

7 I know this is a demonstrative exhibit, but when you  
8 look at it, please keep in context that there are 70 other well  
9 hydrographs and eight spring flow hydrographs that are not  
10 shown on the bigger.

11 I did want to show you just a couple other  
12 hydrographs.

13 Mark, if you could bring those up.

14 These hydrographs here, these are Coyote Springs  
15 Valley, CSVM wells 3, 4 and 5. We'll walk through them.

16 I don't think they're marked on the bottom with  
17 the --

18 THE COURT: This is slide?

19 UNIDENTIFIED SPEAKER: 53.

20 THE COURT: 53.

21 MR. HERREMA: I don't think they're marked on the  
22 bottom of the ROA cites. The ROA cites are 35653 through  
23 35655. They're part of the expert report that Coyote Springs  
24 submitted to the State Engineer back in July of 2019. So the  
25 first is CSVM-3. This is a well that's at the north end of the

1 Coyote Springs Valley.

2 THE COURT: This is the one that's what, 2 miles away  
3 from the Kane Springs Valley well?

4 MR. HERREMA: It's further north. I'm not sure  
5 exactly where it is.

6 The next one I have is CSVM-4 --

7 THE COURT: Oh. Maybe that's the one that's --

8 MR. HERREMA: -- and this is actually shown on  
9 Mr. Bolotin's chart here. You can see it's just south --  
10 southwest of the KMW 1.

11 And this is the well that the -- or the hydrograph  
12 that the State Engineer uses for establishing a close  
13 connection.

14 The next one I'd like to show you though is CSVM-5.  
15 And this is a hydrograph that's not on the State Engineer's  
16 demonstrative exhibit here. This is a well that is west of --  
17 it's in the western portion of the Coyote Springs Valley. And  
18 it's something -- west of something that Mr. Robison has  
19 described as the highway fault. It's a fault that was  
20 identified by CSI's consultant after the State Engineer issued  
21 1303 and said, you know, we're going to have this evidentiary  
22 hearing process.

23 Then CSI engaged a company called Zonge, Z-o-n-g-e,  
24 and they did the CSAMT process that Mr. Morrison talked about  
25 real briefly yesterday. And so this well is west of the

1 highway fault that was identified.

2           So one of the concerns that I talked about on Monday  
3 was the fact that this test took place 25 and a half months.  
4 It's a very short amount of time, and it has to be viewed in  
5 the context it took place. And I mentioned on Monday that it  
6 took place at the end of a long dry period.

7           Mark, could you bring up the precipitation record.

8           I had intended to have this on Monday, and I  
9 apologize that I didn't have it.

10           Here you can see the -- on the bottom here the  
11 precipitation record got a --

12           THE COURT: And what slide is this?

13           UNIDENTIFIED SPEAKER: This would be 54.

14           MR. HERREMA: You can see the ROA cite on the  
15 left-hand side there.

16           Now, this -- there's a dark blue line, and what it  
17 shows during -- it's called cumulative departure from the mean.  
18 And so that's a term of art. It's taken me a long time to kind  
19 of wrap my head around what it means, but if you take a median  
20 amount of precipitation during a -- over a long stretch of time  
21 and you start at that particular point in time, and then you  
22 see cumulatively how are we doing? Are we trending along the  
23 line, along the mean where we think the average would be? If  
24 we're above the mean, then that line would be higher. If we're  
25 below, then that line would be lower. You plot that each year

1 as a trend though. It's cumulative.

2 And so what you see here with this blue line dipping  
3 down, that's a dry period where we had this pump test taking  
4 place. And for all the reasons I talked about previously, you  
5 have to view those pump test results and the data that they  
6 provided in that context.

7 In regard to the inclusion of Kane Springs, I think  
8 Coyote Springs has made its position quite clear.

9 Now, there was a discussion with Ms. Peterson  
10 yesterday. She brought out a ruler and showed the 6 inches and  
11 sort of how much that actually means in terms of these  
12 different water levels.

13 Mr. Lake talked today about an analogy of having a  
14 couple buckets next to each other or one bucket maybe with some  
15 type of structure in the middle that -- or in it that separated  
16 different parts from each other, and it caused differences in  
17 what we call hydraulic head. And what you've been asking  
18 throughout the hearing, you know, what are you talking about  
19 when you're talking about elevations. We're talking about  
20 something called hydraulic head. And frequently it's recorded  
21 as the water level as opposed to -- or as compared to mean sea  
22 level.

23 So we can talk about the altitude of different cities  
24 like Las Vegas, Los Angeles, Denver. We can also talk about  
25 the -- what the hydraulic head in these wells is, and that's a

1 number above a baseline. And so you can compare wells if you  
2 use that common baseline. So we know that the water level in  
3 the wells, regardless of what's happening in terms of the  
4 ground surface, we know that the water level in these wells,  
5 it's different by about 60 feet. And the State Engineer has  
6 said, well, regardless of that you've got a similar response to  
7 the pump test. And so they must be connected.

8           And as Mr. Lake was talking about, you could have  
9 these connected buckets where if one drops because of the  
10 differences in the connection the other might drop. But the  
11 converse is not necessarily true, and particularly given the  
12 way that the pump test was set up. No one disputes that there  
13 was no pumping from the Kane Spring Valley during the 1169 pump  
14 tests. So you might be able to claim that there's an impact on  
15 what's happening in Kane Spring because of the pumping lower  
16 down in Coyote Spring Valley during the 1169 pump test, but  
17 there's no way to claim that there's -- there's no way to know  
18 what the impacts of Kane Spring pumping might be because that  
19 wasn't part of the test.

20           And, in fact, Ms. Peterson did show a plot of two  
21 hydrographs yesterday that showed when they did test the  
22 pumping in the Kane Spring Valley well there wasn't a response  
23 in the Coyote Spring Valley well.

24           Now, one other thing on the Kane Spring exclusion  
25 issue. Yesterday Mr. Morrison brought up or mentioned very

1 briefly a critique of the Zonge work as lacking credibility was  
2 I think the word that he used. I don't think that's a fair way  
3 to characterize his concerns with their work. His briefing,  
4 his answering brief, there was a criticism of the way that they  
5 laid out specific testing lines for this geophysical testing  
6 that they were doing, but I don't know that that goes to the  
7 credibility of the witness. I think that was not really a fair  
8 characterization.

9           And also I would just point out that the Water  
10 District, Moapa Valley Water District acknowledges that faults  
11 can act as low permeability structures at the bottom of Kane  
12 Springs Valley, but they say perhaps it doesn't hydraulically  
13 isolate one basin from the other.

14           The fault found by that Zonge study at the base of  
15 Kane Springs, in CSI's opinion, it acts similarly to the low  
16 permeability layer between the Pahrangat Valley and Kane  
17 Springs. It does create a steep water level gradient that  
18 hydraulically separates Kane Springs and Coyote Springs. And  
19 the same reason that the State Engineer excluded Pahrangat and  
20 Delmar basins from the Lower White River Flow System would  
21 require or mandate the exclusion of Kane Spring Valley from the  
22 Lower White River Flow System as well.

23           I think someone -- maybe more than one person that  
24 said well, this is a remarkably flat basin. And if you look at  
25 60 feet of difference in water level elevation over 22 miles,

1 you know, that's not much of a slope at all, but that's like  
2 saying it's remarkably flat from the sixth floor of your  
3 apartment building to a park 22 miles away as long as you don't  
4 mind that first step walking off the apartment building.

5 Finally, I'd like to reiterate that 1309 doesn't  
6 explain why Ruling 5712 conclusions are -- I'm sorry, why  
7 the -- yes, the Ruling 5712 conclusions are overruled. The  
8 1169 pump tests don't refute the facts that were in 5712, and  
9 the State Engineer's decision to exclude Kane Springs Valley  
10 from the Lower White River Flow Systems is arbitrary, as it  
11 dismisses the difference in hydraulic head that he previously  
12 found to be conclusive evidence in 5712 that Kane Spring Valley  
13 should be excluded from the 1169 pump test.

14 In regard to the 8,000 acre-foot cap, it's been made  
15 clear that this number was come up with primarily, and I think  
16 the State Engineer's brief is very clear that this 8,000  
17 acre-foot number is based on a desire to protect senior Muddy  
18 River rights.

19 And the question I think it begs is if it's necessary  
20 to protect those rights, why set this cap that they've sort of  
21 backed into with this effects analysis as opposed to doing what  
22 the State Engineer previously talked about doing following and  
23 creating a groundwater model, which is what he said in 1169 he  
24 was going to do? And considering his responsibility, as  
25 Ms. Winston talked about, to create a water budget or establish

1 a water budget for each of these individual basins, why do you  
2 need to go -- to back into this number based on affects when  
3 he's got other options.

4 Now, Mr. Taggart showed his clients -- I didn't see  
5 the title of it. I don't know if it was a notice of violation  
6 or a request for action. And whatever the demonstrative was  
7 that he showed in regard to his client's request that the State  
8 Engineer take action on the depletion in the Muddy River flows.

9 THE COURT: It was a notice of alleged violation.

10 MR. HERREMA: Okay. The notice of alleged violation.  
11 Thank you.

12 Now, I would just note the date on that, July 3,  
13 2019. I think that's the same date that expert reports were  
14 due to the State Engineer in the 1303 hearing process. So this  
15 is -- this is something that wasn't done outside of that, this  
16 current process. It was I think occasioned by the work that  
17 they were doing for the 1303 hearing expert reports, but if you  
18 have that available, and the water authority has availed itself  
19 of that.

20 Mr. Taggart talked earlier about different types of  
21 curtailment. He said there's conflict curtailment mechanisms  
22 that the State Engineer can undertake. The water authority has  
23 availed itself of it.

24 So why set this 8,000 acre-foot affects-based cap  
25 now, create the black cloud that we're all under with no idea

1 what's going to happen next, particularly when the State  
2 Engineer hasn't defined how the 8,000 is available within the  
3 subbasins or how it will limit pumping to the 8,000 acre-feet?

4 In regard to the availability of the 8,000, I think  
5 too many people during the proceeding have sort of talked about  
6 the system as if it's one big bathtub without any  
7 heterogeneities in it. So using this concept, this rough  
8 justice concept of impacts at only one particular location to  
9 set this cap, it doesn't take into consideration the  
10 variability and what's happening in the Lower White River Flow  
11 System.

12 It doesn't consider the fact that not every well  
13 has -- pumping from neither each individual well has the same  
14 impacts on the flow system, and there may be flow paths where  
15 water goes -- discharges from completely different parts of the  
16 basin.

17 Mr. Dotson brought up 1169 earlier. He showed  
18 Footnote 12, which is on page 4 of 1169. I'd invite the Court  
19 to take a look at that, and you'll see what the State Engineer  
20 said there about all of the different points of discharge from  
21 the Lower White River Flow System basins. There's many more  
22 than just Muddy River Springs.

23 And so this 8,000 acre-foot cap doesn't take into  
24 account that there may be the ability to pump water that would  
25 not otherwise be discharging from that Muddy River Springs

1 area.

2 In fact, during the pump test, there was 14 and a  
3 half thousand acre feet of pumping of which 5300 occurred in  
4 Coyote Spring Valley. There was only a resultant 300 acre-foot  
5 to 450 acre-foot impact on spring flow. And so that suggests  
6 that there must be other things going on in terms of the  
7 effects of that pumping and where that water is coming from.

8 Mr. Taggart showed a chart. I think it was this  
9 morning, with all of the basins, the 232 basins, and then a  
10 bunch of arrows in between them. And those arrows were showing  
11 the way water flowed in between different basins. And so when  
12 there's communication between the basin, one might contribute  
13 to another, and that was what those arrows showed.

14 Now, these types of movements also occur within the  
15 individual basins, and not just basin to basin, but within the  
16 individual basins you have water coming in, water going out,  
17 water moving in different directions.

18 Mark, could you bring up the chart.

19 (Pause in the proceedings.)

20 This is what Coyote Springs attempted to do in --

21 THE COURT: What page is this or what slide is this?

22 UNIDENTIFIED SPEAKER: This will be 55.

23 MR. HERREMA: Is there an ROA cite on the bottom  
24 there, Mark?

25 UNIDENTIFIED SPEAKER: Yes.

1 MR. HERREMA: Now, this is from CSI's expert report.

2 THE COURT: It says ROA 41017?

3 MR. HERREMA: Yes. Thank you.

4 And this is a type of analysis, and Ms. Winston  
5 touched on it a little bit in her argument as well, but this is  
6 the type of analysis that the State Engineer should -- this is  
7 just Coyote Spring Valley, but this is the type of analysis  
8 that can be done not only in Coyote Spring Valley as part of  
9 the water budget that the State Engineer is required to  
10 develop, but it also can be done to talk about the  
11 relationships between the different basins.

12 And this is the way to develop that number that is --  
13 if they feel that they need to come up with a combined  
14 perennial yield for all these basins, this is the way to do it,  
15 not this backed out impacts analysis of 8,000 that they've come  
16 up with.

17 What that doesn't take into account is the flow paths  
18 that might exist, the faulting structures that I talked about  
19 in terms of the work that Zonge did. There's a -- I think it's  
20 deuterium is the way it's pronounced. It's an isotope that  
21 is -- that you can look at to understand how water moves around  
22 within the basins. If you look at the prior page in CSI's  
23 expert report, which I don't have the slide of unfortunately,  
24 but it's the immediately previous ROA cite. You'll see the  
25 water budget that CSI did that supports these arrows here on

1 the slide that we're looking at.

2 One more thing on the faults. Mr. Taggart discussed  
3 yesterday the movement of water can be fault driven. He talked  
4 about people, you know, finding water in faults and maybe  
5 locating wells there. Faults can both constrain water from  
6 moving from one place to another. They can also act as  
7 conduits. And Vidler and CSI both performed studies following  
8 the issuance of 1303 to come up with that best available  
9 science as to how these faults might exist within the basin.  
10 And the State Engineer largely disregarded this evidence.

11 There's one more thing I would add in regard to the  
12 issue of the individual water budgets. The State Engineer's  
13 website has an estimated perennial yield of each of these 232  
14 delineated basins. And this is the type of analysis that  
15 should be done had the State Engineer not been in such a hurry  
16 to have 1303 boundaries and the 8,000 acre-foot cap adopted.

17 So in summary, we believe the best evidence was  
18 ignored in 1309. The State Engineer relied on 1169 pump test  
19 data for the purpose that it wasn't designed for and was not  
20 interested in the further evaluation of the geophysical  
21 conditions in the basin in order to set a perennial yield as  
22 well.

23 I guess the final point I would make on the 8,000 is  
24 just reiterating that there is no substantial evidence. There  
25 is no specific evidence that was in the record or presented or

1 that the State Engineer can cite to in regard to this 8,000  
2 acre-foot number. So he said it based on the upper bound of a  
3 range of pumping where groundwater levels have, I think, neared  
4 stabilization is the term that he uses, and that simply does  
5 not meet the substantial evidence standard.

6 Thank you.

7 THE COURT: Thank you.

8 MR. ROBISON: I've been told that the head can absorb  
9 only that which the rear end can endure. Do you need a break  
10 or your staff?

11 THE COURT: I'm okay. Oh, I don't know if everyone  
12 else needs a break.

13 MR. ROBISON: That sounded like a no.

14 THE COURT: Okay. All right. I'm okay. Part of my  
15 staying awake and alert strategy is taking copious notes. So  
16 that way and make sure that I'm really concentrating.

17 MR. ROBISON: Well, I hope it's not that much of a  
18 challenge in the next hour.

19 **ARGUMENT FOR COYOTE SPRINGS**

20 MR. ROBISON: Going back, Your Honor, to how we got  
21 here, CSI. It's been mentioned several times, primarily by me,  
22 that we're not strangers to the litigation with the State  
23 Engineer, and all three of those cases, Southern Nevada Water  
24 Authority was an intervenor.

25 With regard to 1303, that was entered after we made a

1 settlement with the State in which we exchange promises of  
2 cooperation. They would in good faith process our  
3 applications, and we would in good faith participate in the  
4 ongoing workshop analysis of the respective basins involved in  
5 this case.

6 THE COURT: So you're talking about regarding the  
7 subdivision map.

8 MR. ROBISON: Yes.

9 What happened, we challenge 1303 because it  
10 primarily, because it included a complete blackout moratorium.  
11 Unlike any other water user in basin 210, any other basin, we  
12 were shut down. And I've told you all about the investments  
13 and the equities involved in that. Well, 1303, just like the  
14 May 16, 2018, letter shut us down. So we challenged 1303  
15 primarily saying that the moratorium is a taking. It's  
16 unconstitutional to take -- to shut down a project and  
17 depriving a project of water is depriving the owner of its  
18 property. And we've talked about the authority that associates  
19 priority as a property right.

20 We're shut down, and so we litigated. And then we  
21 get to 1309. We presented our evidence, and we all know that  
22 story. 1309, they say, nobody has been ordered to stop  
23 pumping. 1309 is just the guidelines, the goalpost, the  
24 guardrails. Well, that might be true for them.

25 We're shut down. Our maps have been denied because

1 1309 says there's no water. So for every other intervenor or  
2 petitioner to say No harm, no foul because nobody has been  
3 asked to stop pumping is a bit misleading in terms of the total  
4 shutdown that Coyote Springs has experienced as a result of  
5 these ongoing administrative proceedings. And it's been shut  
6 down because the basins have been consolidated. They've been  
7 merged. They've been put into a mega basin, which is not  
8 called for in a statute.

9 We've been here with 22 briefs citing probably 50  
10 cases and more than 50 statutes. And you search through these  
11 arguments, and you search through these briefs, and you search  
12 for all this material for one scintilla of legislative  
13 authority to eradicate basins. We know they can manage basin  
14 to basin, particularly where there's a hydrological connection.  
15 We know that. It's done throughout the State.

16 But how does the legislature look at the term basin  
17 in these statutes? What did the legislature mean? Has every  
18 one of those words in those statutes got an asterisk to it that  
19 says this word means whatever the State Engineer wants it to  
20 mean? No.

21 Is there an implicit suggestion by the legislature  
22 that the numerous times they've used the word basin that that  
23 is supposed to be interpreted as anything the State Engineer  
24 says it is based upon whatever it wants to do to manage  
25 groundwater from basin to basin?

1 I want to go back to the statute that you caused me  
2 to look at after your question. 37, please.

3 The State Engineer may make such reasonable rules and  
4 regulations as may be necessary for the proper and orderly  
5 execution of the powers conferred by law.

6 We don't dispute any of the powers that Ms. Winston  
7 talked about today that are in those statutes. We dispute the  
8 distortion of those words, and we believe that what the mega  
9 basin does, it violates the powers conferred under the statutes  
10 to restrict the investigations, the management, conductive  
11 management and the administration to basins.

12 And it gets pretty important why that happens.

13 The Court --

14 38, please, Mark.

15 When you asked me the question what does this mean  
16 with respect to an area, 534.120(1) says,

17 Within an area that has been designated by  
18 the State Engineer as provided for in this  
19 chapter where in the judgment of the State  
20 Engineer the groundwater basin is being  
21 depleted, the State Engineer in his or her  
22 administrative capacity may make such rules,  
23 regulations and orders as are deemed essential  
24 for the welfare of the area involved.

25 And I was concerned with your question with regard to

1 the term area. So we looked, and we said it's got to be  
2 explained in the statute. And sure enough it is. And if we  
3 take a look then at Slide 39, the NRS 534.110, Subsection 7 and  
4 Subsection 8, this explains why the term area is used in .120.  
5 And we start with Subsection 7.

6 Bring that up, please, in the (indiscernible),  
7 please. 7A, Mark.

8 The State Engineer, A, may designate -- not  
9 delineate, as 1309 says. It may designate -- a  
10 critical management area any basin in which  
11 withdrawals of groundwater consistently exceed  
12 perennial yield of the basin.

13 That's not happened in this case, Your Honor. They  
14 haven't confined themselves to the perennial yield of Basin  
15 210, Coyote Springs Valley. They've gone to say, and I think  
16 area is used -- the critical management area, which obviously  
17 explains and helps to find what is meant by within the area in  
18 120, but I've taken some liberty to emphasize our argument with  
19 the next slide, and that's CSI 40. (Indiscernible) the State  
20 Engineer may designate -- go down to the statute that you  
21 brought my attention to, within an area that has been  
22 designated.

23 So the area in the term designated are tied into the  
24 method by which the State Engineer is entitled to designate and  
25 investigate, but every single support, every single line in

1 this is restricted to a basin or within a basin.

2 And we've heard argument that the State Engineer does  
3 this all the time because it will regulate within a basin.  
4 Therefore it has a right to conjunctively managed, but that's  
5 still restricted to a basin.

6 And the real simple question comes down to whether or  
7 not this Court can say, well, if you take these statutes in  
8 their entirety and read them together, is there any explicit or  
9 implicit power to obliterate boundary lines of a basin which  
10 then jeopardize, if not eliminate prior appropriation and  
11 senior priority.

12 Let's go to 42. We made a list of all the basins --  
13 excuse me I made a list of all the statutes in which the term  
14 basin is used. And we looked for any statute that would in any  
15 way suggest that these boundaries can't be eliminated. There's  
16 nothing, none whatsoever.

17 So let's talk about what this mega basin really does,  
18 Your Honor, and this is more important and probably the most  
19 important reason why we're here. If, as in AB51 the legislator  
20 was going to be (indiscernible) they can eliminate prior  
21 appropriation, they can extinguish senior rights of a user, of  
22 a permittee by consolidating basins, the legislature wouldn't  
23 have touched that with a fork because we all know that that  
24 priority is a property right, and you can't take a property  
25 without compensation. We haven't paid anything. I think

1 that's pretty clear. We haven't been paid anything to shut  
2 down our business.

3 But take a look at Basin 210, and that's on Slide 43.  
4 This is the world in which we grew up. 1983 we got our rights.  
5 We developed. We were approved. Spent all that money because  
6 we were junior to 343 acre-feet that Bedroc had, and that's  
7 vested right. We know that. But then the next seniority  
8 rights are our 4600. We're second in Basin 210. We're junior  
9 only to 343 acre-feet. That's all.

10 Below us, as Mr. Taggart said, the juniors get wiped  
11 out. In the event there's not enough water to service that  
12 basin, the juniors get wiped out, and I agree with Mr. Taggart.  
13 They do. So we're not going to get wiped out into 10 because  
14 we're only junior to 343 acre-feet.

15 So the next slide, Your Honor, is 44, and I wish it  
16 was bigger print, but I've made a copy for the Court to look  
17 at, and I got copies for all counsel.

18 THE COURT: I can look it up here.

19 MR. ROBISON: I'm sorry. I missed you.

20 THE COURT: I can look at it right here. So you can  
21 just -- tell me what I should be looking at.

22 MR. ROBISON: Can I mark this next? Because it ties  
23 the two together.

24 THE COURT: Sure.

25 MR. ROBISON: Your Honor, I'll leave copies of this

1 with counsel and have it marked as our next, CSI.

2 UNIDENTIFIED SPEAKER: 56.

3 MR. ROBISON: 56.

4 THE COURT: Okay.

5 (Pause in the proceedings.)

6 THE COURT: So it can't be marked as 56. She's going  
7 to -- she will remark it as whatever it is.

8 THE CLERK: So I'm sending you guys an e-mail of what  
9 I need tonight.

10 MR. ROBISON: Okay.

11 THE CLERK: So you can bring it in. Because for  
12 every time you spoke, I need whatever you did at that time, and  
13 then the next time. I need them all separated out.

14 MR. ROBISON: All right.

15 THE CLERK: Because she's having them -- they're  
16 putting them in order of how you guys speak.

17 MR. ROBISON: Okay. Thank you.

18 THE CLERK: But I will keep it.

19 MR. ROBISON: The document --

20 (Pause in the proceedings.)

21 MR. ROBISON: Well, I'll refer to this document as  
22 the groundwater rights by priority in the Lower White River  
23 Flow System.

24 So this has been given to us by the State Engineer,  
25 and it is saying to us, well, you thought you had pretty good

1 senior rights in 210, but guess what, now you're so far down  
2 the line that you will get wiped out. You are junior to all of  
3 those rights above that blueline, Your Honor.

4 And you might note that those who have joined with  
5 the State Engineer are the intervenors. Look where they are.  
6 They have nothing to lose with 1309. They're senior to us.  
7 And as Mr. Taggart said, the seniors wipe out the juniors. So  
8 going from a position of --

9 MR. TAGGART: I'm just going to object. I said what  
10 I said, Ken, and it will stand for what it was. I said, well  
11 we're going to make that decision later how all of that exactly  
12 works. I didn't admit my client is going to lose all of their  
13 water if that's what you're trying to imply. I said that may  
14 happen, but that's for the next phase.

15 MR. ROBISON: Your Honor, the priority is a very  
16 important aspect of this case. So is prior appropriation.  
17 What we're trying to show you with these exhibits, Your Honor,  
18 is what happens when you combine basins in this fashion. You  
19 put us so far down the line in terms of priority that the  
20 seniors above us, and you start with Bedroc on the very top, we  
21 know they're -- they've been there forever. We've got the  
22 Church of Latter-day Saints, they're right below them. They've  
23 got -- they have seniority on us, but they don't have anything  
24 on us in 210. They've got no water rights in 210 that are  
25 senior to ours.

1           So the mega basin has just destroyed our senior  
2 rights, our prior appropriation rights, and that's what happens  
3 when you do a mega basin.

4           THE COURT: Well, so let me ask you this.

5           MR. ROBISON: Sure.

6           THE COURT: Mr. Robison, because is it -- I mean, I  
7 know that there has been an argument that it would be form over  
8 substance. I mean, can't the Nevada State Engineer, if he's  
9 looking at how the different basins affect each other then  
10 decide, because -- I mean, let's presuppose that there are  
11 designated areas, that Kane Springs has been a designated area  
12 and all of that kind of stuff. So can't he then decide that  
13 because these senior water rights holders are being affected by  
14 junior water right holders in the next basin that he could then  
15 start a curtailment process --

16          MR. ROBISON: He could.

17          THE COURT: -- so that -- and, I mean, in effect it  
18 would be kind of a reprioritizing, kind of like this.

19          MR. ROBISON: Good point, Your Honor, but  
20 unfortunately, the curtailment statutes are limited to a basin  
21 by basin or within a basin.

22          THE COURT: Okay.

23          MR. ROBISON: That's what the legislature said.  
24 That's why you can't do curtailment across boundaries. Because  
25 the statutory -- the legislature --

1 THE COURT: But he could take it into account as far  
2 as how the other basins affect and then based on that within a  
3 basin do curtailment procedures.

4 MR. ROBISON: Sure. He can give us a notice of  
5 curtailment, and we'll go into 210. We'll argue about why we  
6 shouldn't get curtailed in 210.

7 THE COURT: Okay. But that -- it's really more the  
8 fact that that procedure was not followed, as is outlined in  
9 the statute?

10 MR. ROBISON: That's correct, Your Honor. I couldn't  
11 have said it better. Nor could it be followed under the  
12 statutory scheme that's in effect in this case.

13 THE COURT: Okay.

14 MR. ROBISON: So, Your Honor, there was not much talk  
15 in the arguments that have preceded this one about what happens  
16 to senior rights, the prior appropriation doctrine. That was  
17 silent in the last couple days of argument. Because once you  
18 look at what happens in this situation, we've got real problems  
19 with this make a basin creation, which is again first time  
20 ever, and they say it's happened in other areas. It hasn't.  
21 It's happened within the basin where there's been some  
22 conjunctive management issues.

23 So, Your Honor, we believe that the prior  
24 appropriation doctrine should not be jeopardized by the mega  
25 basin efforts that have been accomplished in this case. Again,

1 the suggestion that everybody gets to wait to see what's  
2 happening and that we're living in the shadow, everybody but  
3 us, we've already been shut down.

4 This is a curtailment without curtailment procedures  
5 because our maps have been denied because no water on 1309. So  
6 where do we go? We go to a curtailment that's already  
7 happened. I mean, in effect, this has been a curtailment  
8 process without a curtailment by the statutory framework. So  
9 we're believing that that alone, Your Honor, justifies that  
10 1309 be declared void. It violates statutory definitions of  
11 basin, and it has obliterated the prior appropriation doctrine  
12 as it pertains to us.

13 I want to now go to the hardest part of rebuttal  
14 argument, and that is to go through your notes to see what they  
15 said that you don't agree with.

16 So it's a bit awkward, but I'm sure you've been  
17 there.

18 THE COURT: I have.

19 MR. ROBISON: And, of course, the notes are not  
20 legible. So bear with me.

21 THE COURT: Do you need a minute to organize?

22 MR. ROBISON: Pardon me?

23 THE COURT: Do you need a minute to organize?

24 MR. ROBISON: No. I'm good.

25 THE COURT: You're good. Okay. All right.

1 MR. ROBISON: It was during the State Engineer's --  
2 Mr. Bolotin's argument where you actually addressed the prior  
3 appropriation concern with him. And the answer was curious.  
4 Because it was a -- he immediately diverted to the Kane Springs  
5 issue in terms of prior appropriation. And I don't think the  
6 State Engineer really came back and said all of this mega basin  
7 doesn't negate or adversely affect prior appropriation. And  
8 they can't.

9 But this whole identification of the basin with  
10 respect to that answer comes out of the Rush Report, as  
11 Ms. Winston indicated. And he relies on the water words, and  
12 everybody does in this case. They cite to that dictionary.  
13 Well, that dictionary is the one that defines the basins as  
14 those delineated on the CSS-2 (phonetic), and no other  
15 definition exists in this case.

16 I've already mentioned most of what the State  
17 Engineer said about 1309 not denying rights, that's just --  
18 that's not true. It has definitely affected our rights, and it  
19 has effectively looked at the situation in terms of the  
20 equities. In that case we cite with regard to the equities,  
21 the *Happy Creek* case, it is an interesting read.

22 THE COURT: Which case?

23 MR. ROBISON: *Happy Creek*.

24 THE COURT: Oh, *Happy Creek*.

25 MR. ROBISON: Yep. The Supreme Court, that's the

1 equity discussion by Justice Pickering, my good friend Paul  
2 Taggart successfully argued how equities should be considered  
3 in these water management cases so as not allow anybody to  
4 forfeit rights. It was a good argument. It was a good  
5 opinion, and it applies to this case.

6 I want to respond to the comments made by the Church.  
7 And we agree with the Church in many ways because the argument  
8 by Mr. Carlson in this case was basically you've got to do  
9 something, Your Honor, in this case with regard to 1309 to  
10 protect existing rights, and 1309 protects existing rights.

11 Well, it protects his existing rights. It doesn't  
12 protect our existing rights.

13 And remember the series of events with respect to the  
14 pump test come out in 2012. The rulings come out in 2014.  
15 Each one of those rulings pertains to a specific basin. Each  
16 one of those rulings pertains to applications made in specific  
17 basins. And each one of those rulings in each one of those  
18 basins regarding the applications in those basins say this: We  
19 are not going to grant additional water to protect existing  
20 right so that we can protect existing rights.

21 I then find ourselves in the same position as the  
22 Church and saying, yes, we too want to protect existing rights.  
23 1309 does not protect existing rights unless you have senior  
24 rights over Coyote Springs. 1309 would affect our existing  
25 rights only because of the consolidation, only because of the

1 merger of various basins.

2           So the 1309 basically defies the reasoning set forth  
3 in the various rulings. And two of those rulings were --  
4 rejected CSI's application for groundwater.

5           So my good friend Mr. Dotson says, well, everybody  
6 knew this was coming, that there was limited water. Well,  
7 that's not exactly -- not exactly accurate. There was an  
8 application for over a hundred thousand acre-feet in 2001. And  
9 no one saw it coming. They're in there trying to get more  
10 water for themselves. A hundred acre-feet of those some  
11 hundred applications, and that's when then they, those  
12 applicants, including my client, Las Vegas Valley Water  
13 District, Southern Nevada Water Authority made applications  
14 thinking that everybody had more water. So this wasn't a train  
15 coming down the track with us -- with a deer in the headlight  
16 type of proposition. After the rulings that had been no really  
17 analysis other than quantity. Pump effect.

18           But in terms of what 1169 did that resulted in those  
19 rulings, there's no discussion about (indiscernible),  
20 transmissivity, faults. And Dettinger, who is quoted in 1169  
21 says the analysis of faults is crucial to water management, and  
22 that's why we are so disappointed actually that the State  
23 Engineer would not give us the credibility with regard to the  
24 highway fault, and the 5,000 acre-feet of water that comes out  
25 of the sheep range, which is on the west side 210 and then goes

1 south.

2 So they still don't explain with respect to the need  
3 to make this a mega basin the fact that Coyote Springs can pump  
4 water from the -- in 210. That does not go in any way  
5 whatsoever to Warm Springs and jeopardize a habitat. That is  
6 about 17 to 20,000 acre-feet that bypasses Warm Springs and the  
7 dace habitat. That's what the science showed.

8 So when the Church says protect existing rights, we  
9 go we second that. Please protect our existing rights. That  
10 was articulated in the rulings that said those applications for  
11 more water are denied.

12 Your Honor, I think 1309 might someday, if it  
13 survives this proceeding, lead to some kind of analysis of what  
14 the perennial yield is for the mega basin. But once you step  
15 there, you've already violated a statute that said that these  
16 basins are to be managed based upon the perennial yields of  
17 each of the basins. Again, that begs the question, because  
18 here again we deal with that dreadful word, basin, one the  
19 legislature uses so many times and the courts has.

20 What does basin mean? What does basin mean? That's  
21 what this Court is going to have to tell us in its order on  
22 1309. Does basin mean any combination of basin that the State  
23 Engineer thinks is appropriate to combine? Does basin mean  
24 those enumerated, delineated basins on CSI 2? What does basin  
25 mean? And there's only one definition, and that comes from the

1 Rush Report, that everybody in this (indiscernible) relies on.  
2 And it's those basins on CSS-2, Your Honor.

3 In order to validate 1309, I think the Court is going  
4 to have to find a way to say that basins can be defined as a  
5 mega basin despite prior appropriation. And if you get there,  
6 Your Honor, I don't know how you reconcile making senior rights  
7 junior when you define basin as a mega basin under the statutes  
8 that existed and apply to this case.

9 And that pertains in part to the green light analysis  
10 that was discussed by SNWA and the State Engineer.

11 They said these studies back in 1169 and the rulings  
12 will constitute an orange light, a yellow light or perhaps even  
13 a red light. That's not -- we saw the rulings. We didn't get  
14 more water, but we saw the State Engineer not say in those  
15 rulings that you get less water. We're going to protect your  
16 existing rights, and, of course, that's when the money started  
17 flowing for improvements.

18 And the Las Vegas Valley Water District and together  
19 with us, we created the GID, and the GID was going to provide  
20 the water to our units and our improvements. But then they  
21 shut us down with no analysis, as I pointed out several times.  
22 The light was not red. The rulings for 6255 through 6261 that  
23 they turned bright green and said go for your development  
24 because we're going to protect your existing rights.

25 The cases cited, particularly by SNWA, *Cappaert*,

1 *Griffin*, Pyramid Lake Indian, Paiute Indian Tribe, if you look  
2 at those cases, and we have, they do not resort -- they do not  
3 refer to in any way an implicit permission to combine basins.

4 Yes, they talked about water management, as they  
5 should. And so we're clear, Your Honor, we don't have a  
6 problem with the State Engineer managing the water that is  
7 owned by the public of this State.

8 THE COURT: Let me ask you. Do you have a problem  
9 with him managing it conjunctively?

10 MR. ROBISON: In our basin, not a bit.

11 THE COURT: Okay.

12 MR. ROBISON: You come back, and we'll go, and we'll  
13 go to the hearings, and we'll present our evidence, and we'll  
14 do a conjunctive management plan for Basin 210. I wish we  
15 would have been given that right in the first place. We  
16 wouldn't be here.

17 Your Honor, I've got 25 minutes left, but I've got  
18 five minutes left on the clock.

19 THE COURT: I don't -- well, I should ask my staff  
20 first. Will you guys kill me if we stay a little late?

21 MR. ROBISON: We want to go home, don't we?

22 THE COURT: I mean, if you want -- I mean, if you  
23 want to just --

24 MR. ROBISON: I'd just as soon break today.

25 THE COURT: Okay. That's fine.

1 MR. ROBISON: I'll probably be more precise if you  
2 let me break.

3 THE COURT: No problem.

4 So why don't we break for the day.

5 Let me ask if those who are left.

6 So we've got Apex, Center for Biological Diversity,  
7 Muddy Valley, Nevada Cogeneration Associates, Georgia-Pacific,  
8 Lincoln and Vidler, just to try and get a sense of how much  
9 more time we're looking at, I just want to -- with no pressure.  
10 I mean, you all have your four hours. I'm just trying to get a  
11 sense of if you think we will end tomorrow, or if we'll be  
12 going into Friday. So let me just ask and, you know, like I  
13 said, no pressure.

14 Apex Dry Lake, do you have an estimate of how long  
15 you think you will take?

16 MR. BALDUCCI: Yes, Your Honor, I've been telling  
17 everyone today I should be 15 to 30 minutes, which will be 10  
18 to 40.

19 THE COURT: Okay. All right. And then Center for  
20 Biological Diversity?

21 MR. LAKE: Your Honor, to be safe, mark me down for  
22 an hour. I'll probably use less, but.

23 THE COURT: Okay.

24 And then Muddy Valley.

25 MR. DOTSON: Same, Your Honor.

1 THE COURT: About an hour?

2 MR. DOTSON: Yeah. I'll probably be less.

3 THE COURT: All right. Nevada Cogeneration?

4 MR. FLAHERTY: Your Honor, I think 30 to 60.

5 THE COURT: Okay. I'll put you down for an hour.  
6 Georgia-Pacific.

7 MR. FOLETTA: Your Honor, I'd say 30 to 45 minutes.

8 THE COURT: Okay.

9 And then Lincoln Vidler?

10 MS. PETERSON: An hour to an hour and a half.

11 THE COURT: Okay. So, I mean, it looks like we are  
12 looking like we will be finishing tomorrow. So I guess we'll  
13 just plan for that. Okay. All right. Thank you.

14 Are there any other housekeeping matters that we need  
15 to take care of today or --

16 I think Michelle is going to send you e-mails about  
17 which exhibits we need from you.

18 (Pause in the proceedings.)

19 MR. ROBISON: I wanted to clarify CSI's position in  
20 maybe 51 and 60.

21 MS. WINSTON: 1329, Order 1329.

22 MR. ROBISON: I just wanted to --

23 / / /

24 / / /

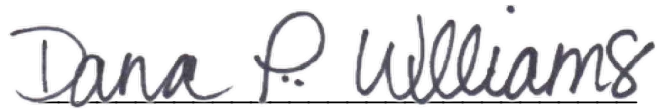

25 / / /

1 THE COURT: You know what, start it tomorrow. Start  
2 with it tomorrow. So that way we have it on the record.

3 (Proceedings recessed for the evening at 4:57 p.m.)

4 -oOo-

5 ATTEST: I do hereby certify that I have truly and correctly  
6 transcribed the audio/video proceedings in the above-entitled  
7 case to the best of my ability.

1 **LAS VEGAS, CLARK COUNTY, NEVADA, FEBRUARY 17, 2022, 8:30 A.M.**

2 \* \* \* \* \*

3 THE COURT: Okay. Good morning, everyone.

4 There was one housekeeping matter that I realized  
5 last night when Mr. Dotson mentioned an amended record on  
6 appeal. I remember maybe a month or two ago that there was  
7 some issues with getting the amended record on appeal filed in  
8 our clerk's office.

9 UNIDENTIFIED SPEAKER: Yes.

10 THE COURT: It's not in Odyssey that I can tell, and  
11 I don't know if that's something that we needed to make sure is  
12 done.

13 Mr. Bolotin, could you kind of let me know --

14 MR. DOTSON: Your Honor, can we get appearances  
15 first, and then after those, we have some additional  
16 housekeeping on top of that too.

17 THE COURT: Sure.

18 MR. DOTSON: That we would like on the record.

19 THE COURT: Okay. Sure.

20 MR. BOLOTIN: Are we on the record, Your Honor?

21 THE COURT: Yeah, we are on the record.

22 MR. DOTSON: Oh, we are. Okay. I just wanted to --

23 MR. BOLOTIN: James Bolotin --

24 THE COURT: Oh, you know what, hold on.

25 My clerk is asking me to do roll call first. So let

JD Reporting, Inc.

1 me do that, and then we can get that other -- those additional  
2 matters on the record.

3 All right. So here on behalf of Las Vegas Water  
4 Valley District and Southern Nevada Water Authority.

5 MR. TAGGART: Paul Taggart here on behalf of the  
6 District and the Authority. Good morning, Your Honor.

7 THE COURT: Good morning.

8 Nevada State Engineer?

9 MR. BOLOTIN: Good morning, Your Honor. James  
10 Bolotin from the Attorney General's office here on behalf of  
11 the Nevada State Engineer. And I once again have Micheline  
12 Fairbank, Deputy Administrator from the Division of Water  
13 Resources.

14 THE COURT: Good morning. Thank you.

15 Lincoln County Water District.

16 MR KLOMP: Good morning, Your Honor. Wayne Klomp on  
17 behalf of Lincoln County Water District. Also with me in the  
18 courtroom is Wade Poulsen, the general manager; and Dylan  
19 Frehner, the Lincoln County District Attorney, is appearing via  
20 BlueJeans.

21 THE COURT: Okay. Thank you.

22 Vidler Water Company?

23 MS. PETERSON: Good morning, Your Honor. Karen  
24 Peterson from Allison MacKenzie law firm, and I have Ms. Palmer  
25 here, Mr. Bushner and are here and Mr. Hurth here.

1 THE COURT: Good morning.

2 Nevada Cogeneration Associates Number 1 and 2.

3 MR. FLAHERTY: Good morning, Your Honor. Frank  
4 Flaherty on behalf of Nevada Cogen.

5 THE COURT: Good morning.

6 Muddy Valley Irrigation Company?

7 MR. DOTSON: Good morning, Your Honor. Rob Dotson  
8 along with Steve King on behalf of Muddy Valley Irrigation  
9 Company, and we have the executive director and probably  
10 members of the board online.

11 THE COURT: Okay. Great. Thank you.

12 Center for Biological Diversity.

13 MR. LAKE: Good morning, Your Honor. Scott Lake for  
14 the Center for Biological Diversity. I have Great Basin  
15 Director Patrick Donnelly and cocounsel Lisa Belenky on  
16 BlueJeans.

17 THE COURT: Great. Thank you.

18 Let's see. Republic Environmental Technologies and  
19 Georgia-Pacific Gypsum.

20 MR. FOLETTA: Good morning, Your Honor. Lucas  
21 Foletta.

22 THE COURT: Thank you.

23 Let's see. Dry Lake Water and Apex.

24 MR. BALDUCCI: Good morning, Your Honor. Christian  
25 Balducci appearing on behalf of Apex and Dry Lake. Also

1 appearing via BlueJeans is Lisa Cole. She's my client  
2 representative and a consultant.

3 THE COURT: Okay. Good morning. Thank you.  
4 Bedroc Limited and Western Elite. Anyone?  
5 No. Okay.  
6 Moapa Valley Water District.

7 MR. MORRISON: Good morning, Your Honor. Greg  
8 Morrison here on behalf of Moapa Valley Water District.

9 THE COURT: Okay. Good morning, Mr. Morrison.  
10 Coyote Springs Investments.

11 MR. ROBISON: Good morning, Your Honor. Kent  
12 Robison, together with cocounsel Emilia Cargill, Brad Herrema  
13 and Hannah Winston by BlueJeans. I should also indicate that  
14 our client Albert Seeno, Jr., has been on BlueJeans the entire  
15 week, and he's present today as well. And Mark Ivie, our  
16 technician.

17 THE COURT: Okay. Thank you.  
18 Sierra Pacific Power Company and Nevada Power  
19 Company.

20 MS. CAVIGLIA: Good morning, Your Honor. Justina  
21 Caviglia on behalf of Sierra Pacific and Nevada Power on  
22 BlueJeans today.

23 THE COURT: Okay. Good morning.  
24 And then the Church of Jesus Christ of Latter-day  
25 Saints?

1 MR. CARLSON: Good morning, Your Honor. Sev Carlson.

2 THE COURT: Good morning, Mr. Carlson.

3 All right. So have I missed anyone?

4 All right. Hearing no answer.

5 Now we will go to the housekeeping matter. I just  
6 left off where I had asked Mr. Bolotin about-- of the amended  
7 record on appeal. Can you enlighten me as far as what  
8 happened --

9 MR. BOLOTIN: Yes, Your Honor.

10 THE COURT: -- or is happening with that?

11 MR. BOLOTIN: So we were -- my office -- this is  
12 James Bolotin for the record.

13 We were alerted that some of the exhibits that were  
14 in the original one were not the versions of those documents  
15 the State Engineer had looked at. There's highlighting and  
16 some other things on some of SNWA's exhibits specifically in  
17 the record on appeal. So we worked to just -- the Bates  
18 stamping stayed the same.

19 THE COURT: Okay.

20 MR. BOLOTIN: And we basically filed an amended  
21 record on appeal to just swap in clean versions of those. I  
22 thought they had been filed. I know that Mr. Ireland in my  
23 office and his assistant were working to make that happen. I  
24 know there was something filed, but we can make sure to get  
25 that. We sent thumb drives and everything to all the parties

1 with the amended record on appeal, but we're happy to do  
2 whatever the Court needs to make sure that it's --

3 THE COURT: Yeah. I think it's -- what you'll  
4 probably need to do is get together with our clerk's office to  
5 make sure -- because it's such a voluminous document that I  
6 think they have to do it in chunks. And even then they  
7 probably -- they probably have to involve IT to do it.

8 MR. BOLOTIN: And I know the first time we did the  
9 really big record on appeal the first time, we did some kind  
10 of --

11 THE COURT: Special something.

12 MR. BOLOTIN: -- special thing behind the scenes that  
13 it was in two really big chunks. And then my understanding in  
14 talking to my colleagues and trying to get this done last time,  
15 we couldn't do that again. So we had to do something --

16 THE COURT: Oh, different.

17 MR. BOLOTIN: -- different, and maybe that's where  
18 the issue is.

19 THE COURT: The issue's at.

20 MR. BOLOTIN: But we'll make sure that that happens  
21 as soon we can.

22 THE COURT: Okay. Great. Thank you.

23 And then, Mr. Dotson, there was some other matter  
24 that you needed to address?

25 MR. DOTSON: Well, there's a few things, but I want

1 to speak on that if I might be heard on that first.

2 THE COURT: Sure.

3 MR. DOTSON: Because one of the things that I noticed  
4 as I was preparing, and you are correct, I alluded to it  
5 because I came to the point in my PowerPoint presentation where  
6 I was going to put in 41996. It happens to be one of the pages  
7 that Mr. Bolotin is referring to that has an interlineation and  
8 highlights --

9 THE COURT: I see.

10 MR. DOTSON: -- and it has metadata as well. The  
11 problem is the new record, which I at that point was thinking  
12 was the new record, is also distorted and blurry. And so if  
13 there is a chance to refile -- it's not in color. The new  
14 record, it doesn't have -- so that particular report, which is  
15 the only part I saw with interlineation, metadata and  
16 highlights.

17 MR. BOLOTIN: Yeah, I think that's it.

18 MR. DOTSON: Starts at Record on Appeal 41930 and  
19 runs to 42029. And in the original, you can see, like these  
20 highlighting, these red interlineations are all in the document  
21 you've seen.

22 THE COURT: Okay.

23 MR. DOTSON: And you can tell that Tom O (phonetic)  
24 or somebody like that is who did it, but that's probably  
25 whoever holds the license. So, for example, when I do a

1 highlight, it shows Morgan Bogomil (phonetic), who is my  
2 assistant.

3 THE COURT: Oh, that's the metadata that you're  
4 talking about. Okay.

5 MR. DOTSON: Yeah, so that's Item Number 1.

6 MR. TAGGART: Well, and I'll just -- Paul Taggart for  
7 the record.

8 We don't know who Tom O is. Everybody has kind of  
9 been curious about it, but -- and this came to my attention  
10 just last week. These are reports of my client that were --  
11 that are the ones that had to be replaced. So if we need to  
12 come up with a clean version, you know, without metadata, but  
13 that's in color because I think it's -- you know, a lot of it  
14 is graphs and all of that, the color really matters. So we can  
15 certainly get you, if need be, a copy that doesn't have that on  
16 it.

17 But, I mean, this is what was in the record before  
18 the State Engineer.

19 THE COURT: Sure.

20 MR. TAGGART: We don't want to change that.

21 MR. BOLOTIN: No. And --

22 MR. TAGGART: So I just want to --

23 THE COURT: Sure. I wonder if it would be easier on  
24 our clerk's office if you filed it as an errata to the record  
25 on appeal, you know, basically saying that these are actually

1 the pages that should be in the original record on appeal.

2 MR. BOLOTIN: And just -- yeah, I think what  
3 happened --

4 MR. DOTSON: Just that document.

5 MR. BOLOTIN: -- was we ended up almost refileing the  
6 whole thing, and I think that was the big problem, and I think  
7 it would be easier if we could just take an ROA range that  
8 needs to be part of an errata and file it. That's a much  
9 smaller chunk. It'll probably be easier to do.

10 THE COURT: Yeah. Because, you know, I think I told  
11 you from the beginning the way that the record on appeal is now  
12 is incredibly difficult to navigate because it makes it really  
13 slow and clunky, which is why I gave you all the task of  
14 attaching the parts of the record of appeal -- on appeal, which  
15 I know is a lot of work on your part.

16 MR. DOTSON: And it's even worse on the amended.

17 THE COURT: Oh, I'm sure.

18 MR. DOTSON: Way worse. I mean, it is very clunky.

19 THE COURT: Yes. It's very difficult to navigate.

20 MR. DOTSON: Yeah.

21 THE COURT: So, Mr. Balducci, please --

22 MR. BALDUCCI: Yeah. I can confer. I've had great  
23 success with the clerk's office in doing very creative things.  
24 So I'll confer with them over the lunch break.

25 THE COURT: Thank you.

1 MR. BALDUCCI: I have some ideas on what we can do to  
2 correct them.

3 THE COURT: Okay. Great. Thank you. I really  
4 appreciate that.

5 All right. So that -- with that --

6 MR. DOTSON: Okay. Two more items.

7 THE COURT: Okay. Two. Okay. Go ahead.

8 MR. DOTSON: Item Number 2 was, just as a  
9 housekeeping matter, that prior petition for judicial review,  
10 we've been able to track down, and there is a notice of entry  
11 of order of dismissal in that case, and the case number is  
12 A-19-789203-J. That is dated. The notice of entry is  
13 9/3/2020. So at least we know that there is not another live  
14 case out there, Your Honor.

15 THE COURT: Okay.

16 MR. DOTSON: And then lastly, and perhaps most  
17 excitingly, apparently my suggestions with the State to reach a  
18 resolution have gained some purchase, and I am pleased, and I  
19 feel like we have an obligation in candor to the Court to  
20 announce that we have reached an agreement in principle for a  
21 settlement of the petition for judicial review, which is indeed  
22 this proceeding, in my mind, that would resolve my client's  
23 petition for judicial review against the State Engineer as well  
24 as I believe Southern Nevada Water Authority's.

25 And I'm happy to describe those elements of that

1 agreement if you would like for the record.

2 My board, the Muddy Valley Irrigation Company Board.

3 THE COURT: So I -- so I understand.

4 MR. DOTSON: No. I'm not --

5 THE COURT: No. No. No. I understand this is not  
6 as to any of the other clients. This is something that they  
7 are just going to put on the record as to their own resolution  
8 that they are -- this doesn't change anything as far as the  
9 petition for judicial review, this hearing, anything along  
10 those lines.

11 MR. DOTSON: And indeed, my board still needs to take  
12 corporate action and vote on it and approve it, and it needs to  
13 be put into writing.

14 THE COURT: So just for the record, you can state  
15 what --

16 MR. DOTSON: What the terms are.

17 THE COURT: Yeah, what the terms are, and then Mr.--

18 MR. ROBISON: Your Honor. Your Honor.

19 THE COURT: Mr. Robison, yes.

20 MR. ROBISON: The cases have been consolidated. He  
21 has to make a motion so we get to view it and comment.

22 MR. DOTSON: I'm getting to that, but you couldn't  
23 wait until I finished.

24 THE COURT: Okay.

25 MR. DOTSON: But I also have an obligation and candor

1 to all of you to describe once we have reached that agreement  
2 because I don't --

3 MR. ROBISON: When the Court approves it in the  
4 process, yeah.

5 MR. DOTSON: Yeah, but this is not --

6 THE COURT: I'm not -- and I'm not making any  
7 decisions about approving anything right now or anything today.

8 MR. DOTSON: Right. And we would proceed as normal.

9 THE COURT: Sure.

10 MR. DOTSON: Today. I intend to conclude my  
11 arguments today, assuming we get to it, and so I don't -- but  
12 each -- the consolidation, as I understand it, each matter did  
13 retain its separate and distinct nature. That's why we had the  
14 number of case numbers that we have, but he's correct. We've  
15 also intervened in each case.

16 MR. ROBISON: You've intervened.

17 MR. DOTSON: -- and it has been consolidated. And I  
18 am not taking -- but I have an obligation, I believe, to  
19 describe the fact that we have reached this so that you don't  
20 hear my arguments today not knowing that we had reached a  
21 tentative agreement with the State.

22 THE COURT: Okay.

23 MR. DOTSON: It doesn't sound like counsel is  
24 interested in hearing that, but --

25 THE COURT: Let me just have him put it on the

1 record, and then you can make any comment after he's done that.

2 MR. ROBISON: Okay. But if they've settled and  
3 they're going to argue, what's the -- what's going on? They  
4 entered into a settlement, resolve all their claims, and then  
5 they want to stand up here at this lectern and argue?

6 THE COURT: So they -- so what he's saying is they  
7 have reached at least an oral settlement, but even if they are  
8 at the preliminary stages of reaching this oral settlement, in  
9 order for them to even actually settle, it would need to be  
10 voted on. So it's just the terms, but it doesn't look like  
11 it's actually firmed up yet.

12 Is that accurate?

13 MR. DOTSON: It's not even in writing yet.

14 MR. ROBISON: Your Honor, if you put a settlement on  
15 the record, it's binding.

16 MR. DOTSON: Yes, if they agree.

17 MR. ROBISON: Binding and executed or put on the  
18 record of the court constitutes a binding settlement. We all  
19 know that.

20 MR. DOTSON: Yeah. As soon as I -- but I also have  
21 an obligation. You're saying I should have just done this like  
22 a Mary Carter and not told the Judge that I have an agreement  
23 in principle?

24 MR. ROBISON: Well, no, I'm not going to talk to  
25 counsel. I'm talking to the Court.

1 THE COURT: Okay.

2 MR. ROBISON: The rules require that a motion be  
3 filed, and the other parties get served because we've  
4 intervened.

5 And then we get to comment on whether or not the  
6 settlement is a Mary Carter type settlement and prejudicial to  
7 us.

8 THE COURT: So let me distinguish what I believe  
9 Mr. Dotson is putting on the record versus what, you know, what  
10 you were talking about as far as the settlement.

11 I think what Mr. Dotson is saying is he just wants to  
12 inform the Court as to the tentative settlement that they've  
13 reached. This is not something that I would be inquiring as to  
14 the parties is this the agreement, you know, are you settled,  
15 that kind of thing to make it officially a settlement that is  
16 binding.

17 MR. DOTSON: Exactly, Your Honor. In fact, if you  
18 canvassed me --

19 THE COURT: So usually when I --

20 MR. DOTSON: -- I'd say no.

21 THE COURT: -- when there's a settlement agreement  
22 reached, I say are these the terms of the settlement that you  
23 reached.

24 MR. ROBISON: Right.

25 THE COURT: You know, do you agree with everything

1 regarding these terms? Yes. Yes. You understand that you're  
2 bound by this? Yes. Yes. That is not what I'm going to be  
3 doing today.

4 MR. ROBISON: Well, then why are we putting it on the  
5 record?

6 THE COURT: I think he's just putting it on the  
7 record to inform the Court that they have tentatively reached a  
8 settlement agreement, but it's not changing these proceedings  
9 in any way at this point because they're still going to be  
10 arguing. They're still going to be moving forward with the  
11 hearing as we're going, but, you know, maybe at a later date,  
12 if something happens, then, you know, they can put a motion on  
13 and that kind of thing.

14 MR. DOTSON: We would put it on the record, Your  
15 Honor, in the interest of transparency and candor to the Court.  
16 If counsel objects to it being on the record and no one else  
17 would like to have it on the record -- I'll speak with the  
18 other parties, but I guess we don't have to put it on the  
19 record right now.

20 MR. ROBISON: Your Honor, I don't think Mr. Dotson is  
21 listening.

22 MR. DOTSON: Oh, I think I'm listening very  
23 carefully.

24 MR. TAGGART: Your Honor --

25 MR. ROBISON: It has to be a motion under Rule 41.

1 We've intervened in this case.

2 THE COURT: So it needs to be a motion if it's going  
3 to be officially approved by the Court.

4 MR. ROBISON: Correct.

5 THE COURT: Right. That is not what we are doing  
6 today. I'm not approving the settlement. I'm not -- there's  
7 nothing along those lines that from a legal standpoint would  
8 make it binding on them. I think it's just an informational  
9 record that they are making. So there's nothing that's binding  
10 on any of these parties as far as this Court is concerned as  
11 far as the information that they are going to be putting on.

12 MR. DOTSON: Right.

13 MR. TAGGART: Your Honor, Paul Taggart for the  
14 Authority and the District.

15 And we also echo Mr. Dotson's comments, and we've  
16 reached an agreement with the State.

17 I think the point is, is that we do have to file a  
18 motion unless nobody objects. We could have announced it here  
19 in open court, and no one objected, and then we could put it on  
20 the record, but if people are going to object.

21 THE COURT: Which I think that's pretty safe -- safe  
22 assumption?

23 MR. TAGGART: Then absolutely, absolutely motions  
24 would be filed, and we'll debate what the consolidation means  
25 with respect to rights of parties to, you know, object or

1 whether they have veto power or what or how you judge what  
2 another party's rights are to object to our settlement.

3 But I think -- so we all expect that that process  
4 will be followed.

5 THE COURT: Okay.

6 MR. DOTSON: So maybe the question an inquiry should  
7 be to the Court. It is -- you are the Judge in this case.  
8 Would you like further detail, or is this transparency  
9 adequate.

10 THE COURT: I think this transparency is adequate.

11 Mr. Balducci, yes.

12 MR. BALDUCCI: Yeah. The only -- I'll come to the  
13 podium.

14 THE COURT: Sure.

15 MR. BALDUCCI: The only concern I would have, and I  
16 echo Mr.-- actually, everyone's comments here, if we're dealing  
17 with a truly false party that is adversarial solely for this  
18 case that has a side deal with the engineer, we need to know  
19 about that. We need to comment on that. I don't know what's  
20 going to come of it. I'm interested to hear the terms, how it  
21 may or may not affect my client. Is it something I need to  
22 comment on today? I don't know. But I think for the sake of  
23 transparency and for evaluating whether the irrigation company  
24 and the Water District are still actual parties with a  
25 controversy in this case or a false party that are basically

1 bootstrapping the engineer, we need -- and I say that in the  
2 most kindest way possible.

3 THE COURT: No, I understand.

4 MR. BALDUCCI: That's what the case law says. And  
5 when we talk about Mary Carter, it goes way back to some case  
6 in, like, 1998 where a defendant settled out, didn't tell  
7 anybody and basically provided testimony in support of the  
8 plaintiff. We need to know about that. And I agree for the  
9 sake of candor and to make sure there's a level playing  
10 field -- I think your --

11 Is it a public company, the --

12 MR. DOTSON: Yeah. Yeah.

13 MR. BALDUCCI: So it would be something that's --

14 MR. DOTSON: Well, it's not public public. They're  
15 just whatever -- there's more than -- it's still closely held,  
16 but it's like 300 shareholders or something like that.

17 MR. BALDUCCI: Okay. That's fair. I think we should  
18 know about what the terms are.

19 THE COURT: All right.

20 And, Ms. Peterson, is there something else --

21 MR. DOTSON: 250.

22 THE COURT: -- you would like to add?

23 MS. PETERSON: I did. This is Karen Peterson from  
24 Allison MacKenzie.

25 And again, these parties are helping other parties

1 with their arguments. It's obviously very clear what's been  
2 going on in this courtroom, and so if they're going to settle,  
3 but still help other parties with regard to their cases, that's  
4 not right.

5 THE COURT: So -- okay. So let me just -- let me  
6 just -- so and I haven't read the Mary Carter case. Just, you  
7 know, in full transparency. I assume that in the Mary Carter  
8 case that there was an actual full and final settlement that  
9 was done between the parties. Is that correct, that they had  
10 actually settled?

11 MR. DOTSON: There was actually an agreement, and  
12 they didn't disclose the fact that there was an agreement.

13 THE COURT: Okay.

14 MR. DOTSON: But what you can do is appropriately  
15 have, like, say reach a high low in a civil case, which is what  
16 I'm more used to.

17 THE COURT: Right.

18 MR. DOTSON: And but you -- at least my practice has  
19 been that you inform the Court once that agreement has been  
20 reached, but you still need the determination from the jury as  
21 to where -- well, where it falls.

22 Here we haven't actually got an agreement, but we  
23 came -- we have an agreement in principle as of this morning.  
24 And so I felt like we need to disclose it to everybody for all  
25 the reasons that have been listed.

1 THE COURT: Okay.

2 MR. ROBISON: Your Honor, Mary Carol -- Mary Carol.  
3 She's my secretary.

4 The Carter case, Your Honor, was a settlement that  
5 was made between one defendant and the plaintiff to the  
6 prejudice of the other defendants because this defendant as  
7 part of the settlement agreed to testify in a certain manner  
8 that hurt the codefendants. That's a Mary Carter settlement.

9 And the reaction is that those are void. Those are  
10 invalid, and our legislature responded, as did our Supreme  
11 Court by invoking rules that the full terms of the settlement  
12 has to be submitted to the Court by a motion. And all of the  
13 other parties have the opportunity to respond to the motion.

14 Well, what's happening here, Your Honor, as  
15 Ms. Peterson pointed out, we've got a collaboration between  
16 these parties, and now they want to say we don't have a dog in  
17 the fight, but we want to argue against the other parties, like  
18 the Vidler and Lincoln County and CSI. That is getting very  
19 close to Mary Carter type settlement.

20 THE COURT: So --

21 MR. DOTSON: We're past that though, Your Honor,  
22 respectfully. We're, at this point, the arguments that are  
23 left are my arguments against the State.

24 MR. ROBISON: Well, then there's no arguments.

25 MR. DOTSON: Well, there is until there's a deal, and

1 the point is there isn't a deal. So unless we want to just  
2 recess and all come back after it's memorialized, which I  
3 wouldn't suggest is the best judicial efficiency.

4 THE COURT: I agree.

5 MR. DOTSON: I think that's where we're at.

6 MR. ROBISON: Well, there's no prejudice for us going  
7 forward right now. Let me argue. Let them argue against the  
8 State. Let everybody do their reply argument, and he can make  
9 his motion and put it on the record. Nobody is accusing them  
10 of not being transparent. It's just the timing and effect.

11 THE COURT: So why don't, for the -- well, kind of  
12 the mushy record at this point, but why don't we do it this way  
13 if that makes it procedurally better. We go through with the  
14 arguments. At the end, if you would like to put on the terms,  
15 unless the other parties wish to know the terms now as far as  
16 if they think it would affect their argument.

17 MR. ROBISON: We don't need the terms because he's  
18 going to argue anyway as though there's not a settlement.

19 THE COURT: Okay.

20 MR. ROBISON: So let's just go forward, Your Honor.

21 THE COURT: All right.

22 MR. BOLOTIN: I just had one point, Your Honor.

23 THE COURT: Yes.

24 MR. BOLOTIN: I don't think -- and this is James  
25 Bolotin for the record.

1 I don't think there would be a false party situation  
2 because they're still intervenors in the case anyway. So  
3 there's still parties to the case, no matter what.

4 MR. ROBISON: Well, not in reply, not in rebuttal.

5 MR. BOLOTIN: No, I don't -- I -- I'm not disagreeing  
6 with that.

7 MR. ROBISON: Okay.

8 MR. BOLOTIN: I'm just saying -- yeah. They would  
9 still be --

10 MR. TAGGART: Yeah. I share the point. I mean, to  
11 the extent my client is a respondent supporting the State  
12 Engineer, if we settle the case that we have with them where we  
13 were a petitioner, we're still responding. We can still  
14 participate in the proceedings as a supporting party that is in  
15 defense of the State Engineer's decision on the areas that we  
16 agree. So we're not done with the case, and we're not  
17 collaborating improperly with anyone if we're the defending the  
18 decision of the State Engineer.

19 THE COURT: Okay. Mr. Lake.

20 MR. LAKE: Your Honor, I just want to echo  
21 Mr. Balducci's comment. It would be helpful for me to know the  
22 terms in order to determine if they are affecting my client's  
23 position.

24 THE COURT: Okay.

25 MR. LAKE: That's all.

1 MR. BALDUCCI: Just for the record, Your Honor, so I  
2 can provide you with the cases you may need if you want to take  
3 some time.

4 THE COURT: Okay. I'll look them up, and I'll read  
5 them.

6 MR. BALDUCCI: *Lum versus Stinnett* --

7 THE COURT: Wait. Wait. Wait. Wait. Hold on.

8 All right. I have Westlaw in my chambers. Okay. If  
9 you could...

10 MR. BALDUCCI: Yeah. *Lum versus Stinnett*, 87 Nevada  
11 402. That's a 1971 case that first laid out the groundwork.  
12 And to be clear, the Nevada Supreme Court has never expressly  
13 adopted the Mary Carter rule, but it has referred to it in  
14 various cases and acknowledged those settlements are void.

15 The next case is *NAD, Inc. versus Eighth Judicial*  
16 *District Court*, cite 115 Nevada 71.

17 Don't ask me why I have all these cases saved in my  
18 Dropbox.

19 THE COURT: I'm thankful.

20 MR. BALDUCCI: And an unpublished decision Norden  
21 (phonetic) Company versus Fergustrohm (phonetic) (2001)  
22 Westlaw 1628302. I can tell you at the time that I looked  
23 these up it must have been in 2017. That was the entire  
24 universe of Nevada cases I found myself, personally.

25 And just a final comment in terms of what these terms

1 are. I'm curious to know what they are because I'd like to  
2 know does the irrigation company have standing to raise certain  
3 arguments in response? That's one of the biggest areas that  
4 I'm most curious about.

5 THE COURT: Okay. So let me do this. I'm going to  
6 e-mail myself my link to Westlaw so I can look it up in here,  
7 and then I'll be right back.

8 (Pause in the proceedings.)

9 (Off the record at 8:53 a.m., until 8:57 a.m.)

10 MR. ROBISON: ... people that are on the enlightened  
11 side of this case.

12 THE COURT: Yes.

13 MR. ROBISON: And we will welcome that that be put on  
14 the record.

15 THE COURT: Okay. All right. So then --

16 MS. PETERSON: Well, maybe we --

17 THE COURT: Yes, Ms. Peterson.

18 MS. PETERSON: Under your terms, Your Honor, that  
19 it's just to inform the Court, it's not that the Court is --

20 THE COURT: Just to, yeah. Yes.

21 MS. PETERSON: -- yeah.

22 THE COURT: Yes. This is just to inform the Court.  
23 There is no motion. This is not a formal determination. I'm  
24 not going to be asking the parties if that's the terms of the  
25 agreement and that they are bound by it. It's just

1 informational only to place on the record.

2 All right. So then go ahead.

3 MR. DOTSON: All right. Thank you, Your Honor. And  
4 I appreciate that. And I'll -- yes.

5 In the interest of transparency, I'm going to  
6 articulate what I understand to be the agreement, and then I'll  
7 welcome the State and SNWA if they believe I misstated or want  
8 to add to the terms.

9 So the Nevada State Engineer would stipulate to  
10 essentially strike the two paragraphs in Order 1309 that were  
11 the focus of the petition for judicial review for MVIC. I  
12 believe those are found on pages 60 and 61 of the document.  
13 Actually, it's -- yes, it's pages 60 and 61, 61 and 62 of the  
14 record. So it's the second first paragraph on page 60, and  
15 then the last paragraph on that page rolls over to the next  
16 page.

17 And this, of course, not surprisingly, includes the  
18 language capture or potential capture of the waters of the  
19 decreed system does not constitute a conflict with decreed  
20 right holders if the flow of the source is sufficient to serve  
21 decreed rights.

22 And basically it also includes the mathematical  
23 analysis of the consumptive use calculation that we believe was  
24 improper. So that would be Element Number 1.

25 Element Number 2 would be that the -- there would be

1 an agreement and the State Engineer would stipulate to a  
2 biannual, so every two years, or biannual assessment of the  
3 pumping of and water levels and flow levels of the river to  
4 determine if further reduction below the 8,000 acre-feet annual  
5 cap that is articulated in 1309 would be appropriate.

6 And for that assessment, Muddy Valley Irrigation  
7 Company and Southern Nevada Water Authority would have the  
8 right to provide input and review the data upon which that  
9 status check, is really what we're talking about is a status  
10 check type situation, occurs. And that first status check  
11 would occur within a year.

12 Is that -- well every two years, but when is the  
13 first one?

14 MR. BOLOTIN: I believe, Your Honor -- this is James  
15 Bolotin for the record.

16 MR. DOTSON: I don't think we talked about that.

17 MR. BOLOTIN: No. I think it was April 2024.

18 MR. DOTSON: Okay. April 2024 is agreeable.

19 As you can see, we have not exactly finalized this.

20 And the third element would be that there would be in  
21 future hearings either related to this or separate, but likely  
22 related to the continuation of the 1309 process, the State  
23 Engineer would be acting within your authority as a special  
24 master of this court, the decree court, and would continue with  
25 the original plan of completing a conflicts analysis, and that

1 conflicts analysis would seek to determine and adjust pumping,  
2 determining what pumping may be interfering with flow of the  
3 Muddy River and to what extent that occurs. With the concept  
4 at least of hopefully returning the decreed flows to the river  
5 and to the water users who have decreed rights on the river.

6 Obviously SNWA and Muddy Valley Irrigation Company  
7 would be invited to participate in that proceeding as well.

8 Importantly, there will be no stipulation, and so to  
9 the extent that my statements here authorized by my client to  
10 stipulate to the flow, predevelopment flow at 33,900, that  
11 would be withdrawn, and my client would be free to argue that  
12 that flow was in excess of that.

13 This should allay the fears that have been described  
14 by some parties because that would also allow the State  
15 Engineer to determine freely, without being tied to that  
16 number, what the flow -- predevelopment flow is as well and  
17 what is being impacted by pumping versus other sources.

18 What else is -- am I forgetting?

19 MR. TAGGART: Your Honor, Paul Taggart for the  
20 District and the Authority.

21 MR. ROBISON: Your Honor, may I interrupt?

22 MR. TAGGART: And --

23 MR. ROBISON: This is argument. This is asking the  
24 Court to approve 8,000?

25 THE COURT: I'm not -- I'm not.

1 MR. TAGGART: No.

2 THE COURT: I'm not doing that.

3 MR. ROBISON: They say we want you involved in future  
4 proceedings to enforce and interpret our settlement regarding  
5 the 8,000 and continued monitoring with the flows in the river.  
6 That's what this case is about, and now they're trying to  
7 influence this Honorable Court --

8 THE COURT: Well, that's -- okay. So --

9 MR. ROBISON: -- by saying it's a settlement.

10 THE COURT: That is -- that's not what I heard. So  
11 what I heard is that they are tentatively reaching this  
12 settlement, one which would be that that conflict language and  
13 the mathematical analysis of the consumptive use would be  
14 stricken, that biannually they would do an assessment of the  
15 water levels and the flow levels of the rivers, and to  
16 determine if further reduction below the 8,000 cap would be  
17 appropriate, which Muddy Valley and Southern Nevada would be  
18 able to provide input and that in the future hearings regarding  
19 talking about the continuation of 1309 as far as the conflicts  
20 analysis that Muddy Valley and Southern Nevada would be able to  
21 participate, but they are also stipulating that they would  
22 be -- there would be no stipulation as to the 33,000  
23 acre-feet --

24 MR. DOTSON: 33,900, yeah.

25 THE COURT: -- that are regarding the original

1 predevelopment --

2 MR. DOTSON: Predevelopment flow.

3 THE COURT: -- predevelopment flow. So the Nevada  
4 State Engineer would not be tied to that number as far as  
5 determining the predevelopment flow. That's what I've heard.  
6 So I haven't heard anything about me making any decisions on  
7 that.

8 MR. DOTSON: The only thing was we would ask that  
9 you --

10 MR. TAGGART: Your Honor, so Paul Taggart for the  
11 record.

12 THE COURT: Okay.

13 MR. TAGGART: Your Honor, we agree, but I just want  
14 to clarify that based upon some comments that were made  
15 yesterday and based upon some positions that we've taken, we  
16 believe the decree court is the proper place to have the  
17 conflicts determination made.

18 THE COURT: So you're saying you are agreeing that he  
19 would be acting as a special master --

20 MR. TAGGART: Well -- well --

21 THE COURT: I mean, that's not something that I'm  
22 making a decision on today.

23 MR. TAGGART: No, you're not.

24 What we're contemplating is that we would file a  
25 petition with the decree court asking the decree court to

1 direct the State Engineer as the decree court special master to  
2 do a conflicts analysis.

3 THE COURT: So that would be all part of a motion  
4 that is done --

5 MR. TAGGART: Exactly. Exactly.

6 THE COURT: -- and everything --

7 MR. TAGGART: Exactly. There would be a process  
8 where we -- I mean, Ms. Peterson made some comments yesterday  
9 about notice to all decree owners and whether the decree is  
10 being interpreted or whether it's being modified. So we  
11 believe that it's the decree court's job to enforce water  
12 rights if they're being impacted under the decree.

13 So what we're contemplating is having that process  
14 initiated in the decree court and then having the State  
15 Engineer authorize a special master directed to make  
16 recommendations back to the Court on conflicts.

17 THE COURT: Okay.

18 MR. TAGGART: That's it.

19 THE COURT: Okay. And this is obviously with the  
20 assumption if this Court affirms the order -- I mean, affirms  
21 the, yeah, the order, Order 1309. If I do not affirm the  
22 order, if I reverse it and remand or if I strike it, then that  
23 all kind of goes out the window I assume.

24 MR. TAGGART: Yeah, we talked about that, but we  
25 can't quite play it forward clearly on where that would be in

1 that role.

2 THE COURT: Sure.

3 MR. TAGGART: But, yeah, that's definitely an unknown  
4 on what would happen without 1309.

5 THE COURT: Okay. So is there -- does anyone else  
6 want to place anything on the record with their -- Mr.--

7 MR. BOLOTIN: Your Honor, this is James Bolotin for  
8 the State Engineer.

9 I just wanted to clarify that obviously this would be  
10 a settlement with MVIC and SNWA so they want to protect their  
11 interests and be involved, but any affected party would have a  
12 chance to be involved to the extent conflicts were shown to be  
13 related to one of the other parties' water uses, and I want to  
14 clarify something Mr. Dotson said. I believe that you would  
15 have to strike those two paragraphs. Your Honor, would have to  
16 strike those two pair paragraphs. It wouldn't be something the  
17 State Engineer can do because the jurisdiction is no longer  
18 with the State Engineer. It's with the Court.

19 THE COURT: Well, and that would be done upon a  
20 motion where you're requesting the Court --

21 MR. BOLOTIN: Yes.

22 THE COURT: -- and everyone else would have an  
23 ability to comment on it and that kind of thing.

24 MR. BOLOTIN: That's correct.

25 THE COURT: And I could reject it if I wanted to.

1 MR. BOLOTIN: Correct, Your Honor.

2 THE COURT: All right. So is there any -- are there  
3 any other issues that other parties would like to place on the  
4 record regarding this information?

5 Yes, Mr. Herrema.

6 MR. HERREMA: Herrema. Your Honor, I've just been  
7 told that the folks on BlueJeans can't hear Mr. Bolotin very  
8 well. So we'd just ask him to step closer to a mic if he's  
9 going to speak.

10 THE COURT: Sure.

11 MR. ROBISON: Or not say anything.

12 THE COURT: Mr. Bolotin, did you want to just repeat  
13 what you said closer to a mic --

14 MR. BOLOTIN: Yeah, sure.

15 THE COURT: -- so that the other folks can hear that.

16 MR. BOLOTIN: Yes, Your Honor. James Bolotin for the  
17 State Engineer.

18 I just wanted to clarify that any affected party  
19 would be able to be involved in that process, but obviously  
20 this is the proposed settlement with SNWA and MVIC, which is  
21 why they want to ensure that they specifically would be able to  
22 be involved in that process.

23 And that because Order 1309 is now in the  
24 jurisdiction of the Court due to the petitions for judicial  
25 review, I just wanted to clarify something Mr. Dotson said, and

1 that is the State Engineer can't unilaterally strike those  
2 paragraphs that he cited. It would have to be done by the  
3 Court pursuant to a motion approving the settlement.

4 Thank you, Your Honor.

5 THE COURT: Okay. Thank you.

6 And I know that there were other parties that had  
7 stood up, and it looks like I think you wanted to make some  
8 commentary.

9 MR. BALDUCCI: Yes, Your Honor. Christian Balducci  
10 on behalf of Apex and Dry Lake.

11 When people come to find me at court, they usually  
12 look on the third floor in front of the business courts or  
13 med-mal sweeps.

14 I'd request just a brief period of time to consult  
15 with my client to ascertain how, if at all this may or may not  
16 affect the rights.

17 THE COURT: Okay. And, yes.

18 MR. ROBISON: Oh, I'd just like to proceed with  
19 argument.

20 THE COURT: Oh, okay. All right.

21 Mr. Balducci, do you need that time now, or are you  
22 okay if we do it like during the break before you argue?

23 MR. BALDUCCI: I could probably place a call while  
24 they're --

25 THE COURT: They're arguing. Okay.

1 MR. BALDUCCI: -- Mr. Robison is arguing. I think  
2 that's fine.

3 THE COURT: Okay. Great. All right. So then are  
4 we --

5 MR. LAKE: Your Honor.

6 THE COURT: Oh, yes, Mr. Lake.

7 MR. LAKE: I'd like to request the same thing.

8 THE COURT: That you would like to have a little bit  
9 of time to consult with your client?

10 MR. LAKE: Yes.

11 THE COURT: That's fine.

12 All right. So let's see. Looking at the -- so I  
13 think just so that everyone is clear on the order, we've got  
14 Coyote Springs. Next is Apex. After that is the Center for  
15 Biological Diversity. So I don't know if -- I mean, what I  
16 could do is after he finishes, Mr. Robison finishes, I could  
17 take a quick five-minute break.

18 MR. LAKE: That works. I would like to observe  
19 Mr. Robison's argument. So just as long as it's before my  
20 argument it would be okay.

21 THE COURT: Okay. No problem. All right.

22 All right. So now we are ready.

23 Or is there anything else?

24 (No audible response.)

25 THE COURT: No. Okay. All right. Now we are ready.

1 Are you ready, Mr. Robison?

2 MR. ROBISON: Yes, Your Honor, I am.

3 THE COURT: Okay. Great.

4 **CONTINUED ARGUMENT FOR COYOTE SPRINGS**

5 MR. ROBISON: Your Honor, I just want to, so we're  
6 clear, I understand what happened today under the theme of  
7 transparency, but what we heard we're pretty sure that we're  
8 filing oppositions with respect to the approval of that  
9 settlement.

10 THE COURT: Oh, I do not doubt.

11 MR. ROBISON: Okay. And I'd like to proceed without  
12 prejudice.

13 THE COURT: Absolutely.

14 MR. ROBISON: And clear my mind that I'm not talking  
15 to some special master who is regulating the water flow in the  
16 Muddy River as I argue my case. So I'm just going to put that  
17 out of my head although and my blood pressure will come down a  
18 little bit and I'll argue.

19 May it please Your Honor. Good morning.

20 THE COURT: Good morning.

21 MR. ROBISON: I'd like to show the Court, again  
22 CSI 43 please. And going to the prayer appropriation  
23 situation. The Court asked me yesterday whether or not CSI  
24 would be willing and a good faith participant in a conjunctive  
25 management and the answer is, definitively, definitely,

1 absolutely, yes, we are and we would. We have to.

2 So we're in 210, and if I can show you the inventory,  
3 the list of the priorities on 44 and 45. Here I've put them  
4 together, Your Honor, but as you go down to the blue line, what  
5 I want you to see, Your Honor, is what happens to this 8,000  
6 foot limitation restriction.

7 So, Mark, could you show us where we are in 8,000.

8 If all the seniors were given rights over us as  
9 junior rights on this particular exhibit, we'd be left with 500  
10 acre feet. And what would happen to the rest and underneath  
11 if, as it's stated, the juniors are wiped out, that's what's  
12 left in the mega basin right there.

13 The intervenors, Bedroc, which Bedroc's best position  
14 of anybody because they've got the best of rights, oldest, and  
15 they're first in time of everybody. But and that black area  
16 represents what once was first in time in 210 and now last in  
17 time or nonexistent in the mega basin. So, Your Honor --

18 THE COURT: What slide?

19 MR. ROBISON: I'm sorry?

20 THE COURT: What slide is this?

21 MR. ROBISON: That's 44 and 45. 45 has the blue area  
22 that indicates the holdings of CSI. But, more importantly, if  
23 you go to the top --

24 I don't know if you can enlarge that, Mark.

25 -- but the way you read across this document it

1 doesn't talk about acre feet, it talks about duty.

2           So, Your Honor, the first column identifies the basin  
3 in which water rights were provided, were given, permits were  
4 issued. And then the second -- third column over from -- going  
5 left to right is the priority dates. So you can see, Your  
6 Honor, who was first in time according to the State Engineer on  
7 this chart, and it carefully delineates who's first in line and  
8 therefore first in right.

9           And then, Your Honor, you go two more columns over  
10 where it says annual duty.

11           THE COURT: Uh-huh.

12           MR. ROBISON: Annual duty is the AFA, the acre feet  
13 annually. And so that's going to show you what we've been  
14 permitted. And just so we're clear, Your Honor, on that blue  
15 area, on 45, give me back the blue area.

16           THE COURT: So let me ask because there's an annual  
17 duty and a cumulative duty?

18           MR. ROBISON: Yes. What -- look at that cumulative.  
19 All that does is add up. So you take the next line below, you  
20 add it and it's a cumulative.

21           THE COURT: Oh, I see.

22           MR. ROBISON: But that's where you get to 8,000, Your  
23 Honor.

24           THE COURT: So it is the cumulative duty for everyone  
25 or just for that right holder?

1 MR. ROBISON: For everyone. So if you look --

2 THE COURT: So it'll just keep adding up all the way  
3 down? Okay. I see.

4 MR. ROBISON: Yeah, if you look at the bottom it's  
5 like -- what is it, 15,000 or 25,000 acre-feet.

6 THE COURT: I see it. Okay.

7 MR. ROBISON: That is the cumulative duty. But if  
8 you look, just go back up and you find 8,000 which in my  
9 example here on --

10 THE COURT: I see. So that's where you're saying  
11 that you would be limited to the 500 acre-feet --

12 MR. ROBISON: That's all that would be left.

13 THE COURT: -- annually because everything else had  
14 added up before you.

15 MR. ROBISON: If the seniors wipe us up we're left  
16 with 500 --

17 THE COURT: Okay.

18 MR. ROBISON: -- acre-feet.

19 THE COURT: And then what is the one all the way to  
20 the right? What is the --

21 MR. ROBISON: The cumulative percentage?

22 THE COURT: No, pumpage. Pumpage. What is --

23 MR. ROBISON: Yeah.

24 THE COURT: -- explain to me what the pumpage  
25 indicates.

1 MR. ROBISON: I wish I could; I don't know.

2 THE COURT: Oh, okay.

3 MR. ROBISON: But I do know 8,000 is a big part of  
4 this case and I know where 8,000 is on this chart, and that's  
5 what I'm trying to illustrate here, Your Honor.

6 THE COURT: Okay.

7 MR. ROBISON: But let's take a look at the next  
8 slide, Exhibit 14, CSI 14. That's what's been appropriated for  
9 the various basins that are at issue in this case. 16,000  
10 acre-feet has been appropriated for Coyote Springs Valley.  
11 That's where we live. That's where we are. That's where we're  
12 building our development. And as I told you yesterday, all but  
13 about 5,000 acre feet of that is junior to us and Bedroc.

14 So the flows of the water, as I indicated, flows to  
15 the east, Warm Springs, flows to the south. South doesn't  
16 affect habitat, doesn't affect the decree rights.

17 So let's talk then about conjunctive management, Your  
18 Honor. If we look at NRS 533.024, this is the policy decision  
19 that you've been shown and read a million times in this  
20 hearing, and I'm just telling you, we're in.

21 The legislative policy, and we have no dispute with  
22 it, is that the policy of this state is that we are encouraged  
23 as a sustaining juror to manage conjunctively what water is  
24 available. Now, the water availability in Basin 10 has  
25 completely different criteria and characteristics as the

1 availability of the water for the mega basin.

2           So what we do is say we have to conjunctively manage  
3 if we get the opportunity to eliminate 1309 and sit down and  
4 work with the State Engineer on Basin 210, which gives us some  
5 pretty good leverage, I think, to talk to the engineer and this  
6 Court about what happens if 1309's invalid.

7           We're putting up two, please -- or 33, excuse me.

8           Can you enlarge that, Mark? Thank you.

9           Your Honor, on the top, I wrote out on Kane Springs  
10 because this was a slide I use to explain what had happened  
11 with 1609 and the ruins --

12           THE COURT: Which slide is this again?

13           MR. ROBISON: This is 33, Your Honor, CSI 33. Kane  
14 Springs was out on the 16 -- 1169 analysis, the pump test  
15 wasn't pumped. And then the other basins, Lower Moapa Valley,  
16 it was in, but then when we came out in 1309 it reversed Lower  
17 Moapa Valley even though there's transmissivity and even though  
18 there's hydrological connections, State Engineer took that one  
19 out and put Kane Springs in.

20           Now, we have five -- we have a thousand acre feet  
21 that we've purchased and have options for out of Kane Springs,  
22 and that's why Kane Springs is a pretty crucial and important  
23 issue to us. But look -- let's take a look at this. What the  
24 tests and what the testimony has shown, Your Honor, is that the  
25 effect on the aquifers and the Warm Springs. It kind of has

1 concentric circles of influence. Right out of the bat we know  
2 that the pumping in the Warm Springs area, Moapa Valley Water  
3 District, dramatically affect water levels. And they're junior  
4 to us.

5 But if you go on to another concentric circles, there  
6 is clear evidence that there's less and less of an impact  
7 necessarily on Warm Springs, the habitant and the decreed  
8 water. So when you sit down with the State Engineer and say  
9 1309 went by the wayside, but we've got to come back anyway.  
10 We are going to be back in front of the State Engineer no  
11 matter what happens at this level with this Honorable Court, we  
12 are. And we go conjunctively manage Basin 210 with us.

13 We have two primary objectives; protect endangered  
14 species. We don't have a choice. We've heard endangered  
15 species act. We've heard what the concern is and none of us  
16 have a choice about that. So our pumps on the eastern side of  
17 210 are more influential to Warm Springs than are the pumps  
18 that we -- the wells that we've pumped on the west side. And  
19 the west side, and according to our theories, where there's  
20 more water. We'd have to prove this at a conjunctive  
21 management type process, and we're prepared to do that.

22 So if we conjunctively manage it, reduce or eliminate  
23 our wells on the east side of 210 and we focus our project on  
24 the wells on the east side and pump there, which is water that  
25 goes from north to south, bypasses Warm Springs, comes off the

1 Sheep Range; we have a plan that says we'll get our 4140 --

2 THE COURT: And so -- wait, hold on. I thought you  
3 said that your pumps on the eastern side are more influential  
4 on the Muddy Valley floor --

5 MR. ROBISON: Have more of an effect.

6 THE COURT: What was that?

7 MR. ROBISON: Have more of an effect.

8 THE COURT: More of an effect.

9 MR. ROBISON: I guess influential but --

10 THE COURT: Yeah, more of an effect than the western  
11 side.

12 MR. ROBISON: -- they're the ones we'd have to -- I'm  
13 sorry, Your Honor, I interrupted you.

14 THE COURT: So you're saying that they're more --  
15 yeah, more of an effect than the western side --

16 MR. ROBISON: Right.

17 THE COURT: -- but then I thought I heard you say  
18 that you would be pumping more from the eastern side?

19 MR. ROBISON: That -- if I said that, I definitely  
20 misspoke.

21 THE COURT: Okay. Maybe I misheard.

22 MR. ROBISON: I think I misspoke.

23 THE COURT: Okay.

24 MR. ROBISON: No, the idea on a conjunctive  
25 management with others, we know that we're connected, but we

1 know also that we could conjunctively manage 210 in such a way  
2 as to mitigate as we have in the past with the 460 acre-feet  
3 that we've dedicated to the dace, and we could mitigate if we  
4 do a conjunctive mega plant in 210.

5           And then no one's concerned about the definition of  
6 basin, designate, delineate; we're doing what the State policy  
7 asked us to do to mitigate. Reducing the pumpage or  
8 eliminating the pumpage on the east side, focusing the  
9 management plan on the west side and proceeding accordingly.

10           We don't get wiped out under that kind of analysis.  
11 And that is why this basin by basin analysis is so important  
12 and is the spirit and intent of the legislation so that you can  
13 make these adjustments in a basin by basin basis even though  
14 there's hydrological connection and transmissivity, but it can  
15 be managed in the basin if this 1309 has gone away.

16           What happens on the other basins is the same thing.  
17 We know there are effects if there's excessive pumping, if they  
18 pumped all 1600 acre-feet that would not be a good day for the  
19 endangered species. But that is a basin by basin management  
20 proposition.

21           Would we get a haircut, as they say, would we get  
22 curtailed under that conjunctive management plan? Perhaps,  
23 perhaps, but it would be a process which has been in place for  
24 decades in this country -- excuse me, in this State.

25           So, Your Honor, 1309 is a restriction to being able

1 to allow the people in their respective basins to manage  
2 together with the State Engineer for the protection of all  
3 rights; senior rights, us, the dace and the decreed water.

4           The challenge in this case is really an  
5 interpretation issue as Ms. Winston argued yesterday, but I  
6 want to reemphasize we cited several cases in our brief about  
7 whether or not the State Engineer's entitled to any deference  
8 on purely questions of law. Most important of which is the  
9 Town of Eureka, and in that case we're told that the review of  
10 the legal issues by a Court on a petition for judicial review  
11 procedure is *de novo* and that questions of law are to be  
12 decided by the Court, and according to the town of Eureka case  
13 that we've cited, the State Engineer is not entitled to a  
14 deference with respect to the questions of law in this case.

15           And the big, the big elephant in the room, Your  
16 Honor, is whether or not the statutory configuration of all  
17 these statutes referring to basins and areas within basins is  
18 to prevent or be construed in such a way the State Engineer did  
19 not have the legal authority to invoke 1309. I've made that  
20 point many times.

21           So, Your Honor, let's just take a look at where we  
22 are. I had this pretty well set in my mind until this morning.  
23 One, 1309 is void. The State Engineer did not have the  
24 authority to create a mega basin, which incidentally they say  
25 is a mega mess now and would not be a mega mess if 1309 were

1 honored.

2 Well, Basin 210 would not be a mega mess if it were  
3 monitored and that we've had monitoring wells and a conjunctive  
4 management plan in Basin 210. So we eliminate that.

5 But if 1309 is declared to be void because of  
6 authority issues, due process, prior appropriation issues that  
7 we brought to this Court, we go back. We have to go back to  
8 the State Engineer. And we have to negotiate whatever comes  
9 out of that effect of it being void. We've got to. In fact, I  
10 think, all of us would have to, but hopefully it's going to be  
11 on basin by basin basis with the same objective and the same  
12 criteria in mind that led to 1309; that allegedly protects  
13 things, it doesn't protect existing priorities. It does not  
14 protect existing priorities. So we're going back if this order  
15 is void.

16 What if it's partially void? I think that is nearly  
17 moot because of the collaboration between the Southern Nevada  
18 Water Authority, the Muddy Water Irrigation District and the  
19 State Engineer. That, apparently, has been put on the record  
20 subject to approval of various public boards. If it's  
21 approved, we'll have to see what it looks like. So we can't  
22 address it, but what they took position is this; SNWA and the  
23 Irrigation District says it's partially void, and we want just  
24 a little bit of it on the decree issue to be remanded and  
25 cleaned up. But that means we're going back. We're going

JD Reporting, Inc.

1 back.

2 And finally, what happens if 1309 is declared  
3 entirely valid? We're going back. Everybody said if this  
4 thing's valid, we got to go back. We're going to see whether  
5 or not there's a formal, finally, curtailment procedure put in  
6 place. We're going to go back to see whether or not the  
7 parties can agree to conjunctively manage the entire seven  
8 basins together as one basin.

9 The point is, Your Honor, we're going back. Under  
10 any result in this case, we're going back to the State Engineer  
11 and trying to work for the benefit of the existing rights, for  
12 the benefit of constructive management, the dace and decreed  
13 water. But we're going back to protect existing priorities.

14 THE COURT: Let me ask a procedural question because,  
15 you know, I know with everyone's conflicting positions, no  
16 matter what I do, this is going to get appealed. So what is  
17 your position of what would happen procedurally that way  
18 depending on --

19 MR. ROBISON: On an appeal?

20 THE COURT: -- well, yeah, at what point is it  
21 something that is ripe for appeal versus if it gets remanded?  
22 What would be the next procedural steps in your view regarding  
23 procedure?

24 MR. ROBISON: It's going -- I'm sorry I keep  
25 interrupting you. I apologize, Your Honor.

1 THE COURT: No, no, that's fine.

2 MR. ROBISON: It's going to depend on how you -- what  
3 conclusions of law you include in your final judgment. And if  
4 there's partial resolution, and also it depends on what is set  
5 forth in the specific notices of appeal or notice of appeal.  
6 The procedure is if only a partial part of your order is  
7 appealed, I don't know whether there'll be motions to stay in  
8 this Court if denied motion to stay in the Supreme Court given  
9 the influence that one part of your decision may have on the  
10 other parties or other parts of your decision. So I wish I  
11 could be more specific and more clear.

12 THE COURT: You know what, that gives me a little bit  
13 more clarity.

14 MR. ROBISON: Yeah. It -- and I don't know if the  
15 mandatory mediation process with the Supreme Court would apply  
16 to this case. The moment we file a notice of appeal, boom,  
17 we're sent to mediation.

18 THE COURT: That's true.

19 MR. ROBISON: Be interested to know whether we would  
20 be referred to mediation then we're calling in a special master  
21 and maybe you won't come in and try to settle this thing.

22 THE COURT: Okay. I just wanted to at least be aware  
23 of the practical aspects of what happens afterward.

24 MR. ROBISON: Well, and I appreciate your point. I  
25 can tell you what the --

1 MR. BOLOTIN: Your Honor -- you can pause  
2 Mr. Robison's time. I'm not trying to take his time.

3 THE COURT: Okay.

4 MR. BOLOTIN: I just wanted to clarify some of the  
5 procedural questions, if that's okay. I didn't know if it was  
6 part of Mr. Robison's argument.

7 MR. ROBISON: Your Honor --

8 THE COURT: Oh, could we have you get closer to the  
9 mic? But -- or maybe what we could do is we could have -- I  
10 mean, this is not something that's like burning in my brain  
11 right this minute.

12 MR. ROBISON: Yeah.

13 MR. BOLOTIN: Okay. I apologize.

14 THE COURT: So maybe we could do that, we could do  
15 that right after Mr. Robison is done.

16 MR. ROBISON: I'm more than willing to give one  
17 minute of my time to Mr. Bolotin to clear up --

18 THE COURT: That's okay. We'll --

19 MR. ROBISON: -- anything I said. But I would like  
20 to finish.

21 THE COURT: Sure.

22 MR. BOLOTIN: Yeah, no problem, Mr. Robison.

23 MR. ROBISON: I was at a point where the Court asked  
24 me what will happen in the event of different resolutions of  
25 this -- these petitions. Not quite sure, but I do know what

1 will happen. I know that CSI and Mr. Seeno will be stuck.  
2 They will be paralyzed. They will not have a project. They  
3 will have payroll. They will have taxes. They will have fees  
4 to pay, but that project will be stuck, and it will be  
5 crippling, and if you give any deference to the equitable  
6 arguments in the Pickering decision that should alone require  
7 and justify officiation of 1309. That's what I know is going  
8 to happen if you validate 1309, Your Honor.

9           Finally, and I would be remiss and I'm not attempting  
10 to curry favor, but I think I speak on behalf of everybody in  
11 this courtroom. Thank you for taking on this massive  
12 assignment. I'm glad --

13           THE COURT: I was kind of voluntold.

14           MR. ROBISON: I'm glad I'm not there. I'd much  
15 rather be at this lectern. But, Your Honor, with the volume of  
16 material that we've dumped on you and the issues involved,  
17 you've done an incredible job, and thank you very much for  
18 entertaining our case.

19           THE COURT: Thank you. Thank you. I appreciate it.

20           All right. So with that, do we want to take the  
21 break so that --

22           Oh, Mr. Bolotin, sorry, let me just -- no time or  
23 anything like that. So, Mr. Bolotin, what is your view then as  
24 far as the procedural aspects?

25           MR. BOLOTIN: Yes. James Bolotin for the record for

1 the State Engineer.

2 I just wanted to talk a little bit about the history  
3 because we've had some -- the State Engineer has had some of  
4 these big cases that go up --

5 THE COURT: Okay.

6 MR. BOLOTIN: -- and down and up and down. And the  
7 key thing is if Your Honor remands the case it's not going to  
8 be --

9 THE COURT: A full panel.

10 MR. BOLOTIN: Yeah, it's not going to be able to  
11 go --

12 THE COURT: Okay. I see.

13 MR. BOLOTIN: -- to the Supreme Court at that point  
14 and there's been cases -- I think Mr. Taggart can help with the  
15 names of the cases because we were both involved in them, but  
16 they were --

17 THE COURT: Okay. I assume that if I affirm, it's  
18 appealable, if I strike, it's appealable, but then I wasn't  
19 sure what would happen as far as, like, it was sort of partial.

20 MR. ROBISON: It's always writable.

21 MR. BOLOTIN: Yeah, and there --

22 THE COURT: Oh, that's true.

23 MR. ROBISON: Okay. So this is, this is --

24 MR. BOLOTIN: No, but there was a case, Your Honor,  
25 that the State, I think, SNWA tried to appeal and then it said

1 it was a remand so it's not appealable and then there's parties  
2 that tried to file writs and the Supreme Court still --

3 THE COURT: Didn't hear it.

4 MS. BROWN: -- said no, go back and have it at the  
5 State Engineers.

6 THE COURT: All right. Mr. Taggart.

7 MR. TAGGART: Yeah, I think Ms. Peterson's probably  
8 (indiscernible) she knows as much about this as I do.

9 THE COURT: Right.

10 MR. TAGGART: But it really depends on the nature of  
11 the order and even if you completely -- well, if you gave  
12 remand instructions, then almost definitely that's not  
13 appealable, and we filed writs in a case like that and the  
14 writs were denied because there was a legal remedy.

15 THE COURT: I see.

16 MR. TAGGART: And the legal remedy was going back  
17 down to the State Engineer, exercising the remand instructions,  
18 going back up to the Court again --

19 THE COURT: And then going back up. Okay.

20 MR. TAGGART: -- and then going to the Supreme Court.  
21 So that was the legal remedy, and they found that our writs  
22 were improper and they denied them.

23 The harder question is even if you -- even if you  
24 uphold 1309, whether that's appealable, you know, I would say  
25 there's a good argument it is --

1 THE COURT: Uh-huh.

2 MR. TAGGART: -- but there may be an argument that --

3 THE COURT: But it's still not finished because  
4 there's a conflict.

5 MR. TAGGART: -- it's just factual and now we have to  
6 go back -- now the State Engineer has its factual decisions. I  
7 mean, I don't want to concede, I guess, you know, then the  
8 State Engineer would have to take those factual determinations  
9 and do the next phase, but I just don't want to concede  
10 anything on the record. But anyway --

11 THE COURT: No, no, I understand. And I understand  
12 this through Robison's -- I mean, if it was affirmed, it would  
13 be probably an appeal on whether or not the State Engineer has  
14 a legal authority --

15 MR. TAGGART: Uh-huh.

16 THE COURT: -- which I think would probably be  
17 something that was --

18 MR. ROBISON: Not to mention, appropriation.

19 THE COURT: Yeah.

20 MR. TAGGART: Yeah, most likely that type of issue, I  
21 think, would be appealable.

22 THE COURT: Okay. And then let -- you know, while  
23 we're talking about it. So I've never had a case where there  
24 were multiple petitioners with multiple petitions. In the  
25 order, do I need to be specific as to what parts of the

1 petitions are granted or denied or -- I mean, if I do one --  
2 so, you know, I had you all prepare proposed findings of facts  
3 and conclusions of law so I didn't have to start from scratch.

4 MR. ROBISON: Remember our stipulation to  
5 consolidate, Your Honor?

6 THE COURT: Yes.

7 MR. ROBISON: Each and every one of us said that each  
8 of our petitions were retained as separate and distinct legal  
9 and factual characteristics.

10 THE COURT: Okay.

11 MR. ROBISON: So I respectfully suggest that there's  
12 going to have to be, if there is a set of findings, broken out  
13 petitioner, petitioner.

14 THE COURT: By petition.

15 MR. ROBISON: There could be joint findings --

16 THE COURT: Okay.

17 MR. ROBISON: -- and separate findings per petition.

18 THE COURT: Okay.

19 MR. TAGGART: And I -- typically, we don't see a  
20 Court go through the petition and address each claim in the  
21 petition.

22 THE COURT: No, what I -- I mean --

23 MR. TAGGART: They, you know, they address the case  
24 as it is; right?

25 THE COURT: Right. So, I guess, my question is would

1 I, you know, I -- as far as structuring the order, I would have  
2 the, you know, findings of fact, conclusions of law and then at  
3 the end I would be looking at, you know, petitioner Coyote  
4 Springs' petition is granted as to this, denied as to this  
5 based on the, you know, findings above. Is that, I mean, is  
6 it -- would that -- I just want to make sure that I'm doing it  
7 clean.

8 MR. ROBISON: That's fair, and I think then whoever  
9 gets the short stick on that's going to have to worry about,  
10 you know, 54B certification and all those type of more  
11 complicated issues. So let's wait until we see it.

12 THE COURT: Okay.

13 MR. TAGGART: Well, I -- just not to overly  
14 complicate it. We -- since they're consolidated --

15 THE COURT: Yes.

16 MR. TAGGART: -- if the caption has all the case  
17 numbers on it.

18 THE COURT: Yes.

19 MR. TAGGART: And then in the order you go through,  
20 you know, at the beginning, maybe, each petition, you know,  
21 so-and-so filed petition, so-and-so filed --

22 THE COURT: Right, right, right. The procedural  
23 history --

24 MR. TAGGART: -- then I think the --

25 THE COURT: -- and then it was consolidated.

1 MR. TAGGART: And I think the meat of it could be --

2 THE COURT: Together.

3 MR. TAGGART: -- the same for everyone --

4 THE COURT: Uh-huh.

5 MR. TAGGART: -- but then at the end you may need to  
6 go petition by petition --

7 THE COURT: Right and that's kind of --

8 MR. TAGGART: -- and grant or deny. And then it's,  
9 in a sense, eight separate orders and it's all in one. Sounds  
10 kind of familiar. But --

11 MR. ROBISON: Let's not go there.

12 MR. TAGGART: Okay. But you do have to rule  
13 independently --

14 THE COURT: Right.

15 MR. TAGGART: -- on each petition because they still  
16 retain their independence.

17 MR. ROBISON: Now, I don't want to drop a bomb and  
18 then ask but when this -- if this goes Supreme Court, there --

19 THE COURT: Let's just be honest. When this goes to  
20 the Supreme Court. And we all know in this room.

21 MR. ROBISON: Well, I don't know -- they'll probably  
22 appeal, you're right. But, Your Honor, I have to disclose  
23 this, we're up in the Supreme Court right now in a petition for  
24 judicial review and it's de novo. So they're not looking  
25 necessarily at you. They're looking at the State Engineer with

1 fresh eyes.

2 THE COURT: Oh, I see. Okay. All right. Good to  
3 know. All right.

4 MR. TAGGART: Yeah.

5 THE COURT: All right. Well, thank you for that  
6 clarification. I appreciate it because it will help me when  
7 I'm putting together the order.

8 So why don't we take a five-minute break so that you  
9 all can talk to your clients. And then we'll be back at a  
10 quarter to.

11 (Proceedings recessed 9:38 a.m., until 9:47 a.m.)

12 THE COURT: All right. So we'll be back on the  
13 record.

14 Okay. The floor is yours.

15 **ARGUMENT FOR APEX HOLDING AND DRY LAKE**

16 MR. BALDUCCI: Thank you. Thank you, Your Honor.  
17 Christian Balducci appearing on behalf of Apex and Dry Lake.

18 And before you, as you've seen each and every day  
19 with growing numbers of lawyers in the courtroom and client  
20 representative, there are a lot of parties in this case and  
21 there's certainly are a lot of issues for phony issues, for  
22 that matter, for the Court to sort through, and while you do  
23 know this, I think it's important to emphasize that at the end  
24 of the day this case really isn't any different than any other  
25 petition for judicial review that you've had appear before you

1 up to this date and after.

2           The main issue with respect to this administrative  
3 agency and the engineer is did he have the authority, at least  
4 from my client's perspective that we've raised since I don't  
5 want to be too repetitive, the main issue we have is did the  
6 engineer have the authority to take these seven different  
7 basins or really five individual basins and then apportions of  
8 two other basins and by delineation turn them into one.

9           After listening to all the arguments that have gone  
10 on throughout this case, I've kind of (indiscernible) down to  
11 what I see this case as and how I characterize it. This case  
12 is about the engineer deleting by delineation. The question is  
13 did he -- and what I mean by that is deleting the boundaries of  
14 separately identified basins on the map there of 233 different  
15 maps to combine and conjoin them into one, mixing up the  
16 priority rights of all the various rights holders.

17           THE COURT: And this is slide what?

18           MR. BALDUCCI: This -- so Slide 1 was just the  
19 title --

20           THE COURT: Okay.

21           MR. BALDUCCI: -- and this is what happens when I use  
22 a PowerPoint for the first time of the last day hopefully,  
23 hopefully last day. This is Slide 2, page 2. I will have  
24 this -- I have a lot of time so I can talk about slides. I  
25 will have this filed, and I will do my best to circulate it to

1 all the parties. And I didn't bring it with me earlier today  
2 because the version I would have brought would have been  
3 different than the one I'm showing you right now.

4 THE COURT: Okay.

5 MR. BALDUCCI: So when I -- I tried to come up with  
6 some kind of analogy as to what this did. And where I'm from,  
7 out of the northeast, we have more than just one large unified  
8 school district. We have lots of school districts. And, for  
9 example, my graduating high school class, at least in  
10 Pennsylvania, was just under 2,000 people, but there were lots  
11 of different school districts. I went to Parkland. There was  
12 Whitehall. There was Allen. There was (indiscernible). And  
13 when I was trying to be on the varsity hockey team which many  
14 would say was a bad idea, I knew who I was competing against.  
15 I knew who I could playing with.

16 What happened in this case is the engineer took all  
17 the different school districts and so me and my hockey tryouts  
18 that -- against 30 other people, I figured, okay, 20 on the  
19 team, I only got to beat 10. Took all the school districts, by  
20 delineation, deleted their lines, threw us all in a pile and  
21 now I'm trying out against 150 different, maybe 200, and the  
22 rules now are saying well, we're going to determine who's on  
23 the team by who's most senior. So that means the tenth year  
24 senior is going to get on the team even though he's probably  
25 35, has a beard, at this point has a bum knee and, you know,

1 I'm 17 years old and in much better shape than he is. But  
2 well, because he's a tenth year senior in high school, he gets  
3 to play on the team and I don't. And those are rules I didn't  
4 know about when I applied to be on the team and tried out for  
5 the team.

6 That's what happened. That's what the engineer did.  
7 But there's no statute saying he can do that. Just like  
8 there'd be no statute saying that's what would happen in  
9 Pennsylvania for me.

10 So let's start with one thing I think everyone in  
11 this case agrees on. Pulling up Slide 3. Everyone here agrees  
12 that all the water in Nevada it belongs to the public. And I  
13 think that needs to be the start of the analysis.

14 Rule Number 1, water belongs to the public and the  
15 legislature, not the engineer, represents the public, the  
16 people of Nevada. The engineer's authority to do anything is  
17 rooted only in that which is designated by the legislature.  
18 And if he wants more tools for his toolbox, he has to go to the  
19 legislature.

20 And I understand and I've heard the arguments it's  
21 not that hard. No, sorry, it is very hard. 8051 was a  
22 disaster. It's not just so simple to walk across the street  
23 from the engineer's office in Carson City to the legislature.  
24 It's a tough process. Well, there's a reason it's tough.  
25 Because it's impacting the rights of the people of Nevada and

1 the rights holder of each of these basins. It's intended to be  
2 tough. It's not an easy thing. But at the end of the day,  
3 something not being easy is not a reason to avoid the proper  
4 legal channels.

5 Again, these arguments, I want to thank Your Honor  
6 when we first had these arguments that I thought to myself two  
7 weeks of oral arguments about water. My goodness, there's not  
8 enough solitaire I could play to capture my time. But I found  
9 what was being said to be illuminating because sometimes the  
10 things that come out in the briefs come out far differently  
11 when said in person.

12 And, in particular, as I've highlighted, on February  
13 15th at this point I don't know how far into February we are,  
14 could be nine weeks for all I know, but on the 15th at roughly  
15 1:56 p.m. I heard counsel for the engineer say something that  
16 caused me to rethink about how the engineer looks at his  
17 authority. What was basically said I tried to do apostrophes  
18 but I couldn't write down that quickly, not because Mr. Bolotin  
19 didn't say it slowly enough; it's just because my hand was  
20 cramping from all the solitaire.

21 Basically, what he was saying was the policy  
22 statements are referring to the 533024 statute. This policy  
23 statement from the legislature provides the engineer the lens  
24 to look at his authority when he's using his powers. Okay. So  
25 let's take a step back. It's basically like the glasses he

1 puts on before he reads the statutes. So he can figure out  
2 what they can and cannot say in his opinion which brings me to  
3 really my next slide and why I do have a lot of criticisms of  
4 the engineer and the way he's approached this. Because what I  
5 think is he didn't just approach this as one global process, he  
6 broke this down with these lenses and engaged in a three-step  
7 process.

8 And so we have The Hulk. This is who the engineer  
9 thinks he is when he puts on the NRS 533.024 what I would call  
10 them rose-color lenses. He becomes something different. He is  
11 able to take a broad legislative statement of intent that in  
12 his opinion says, I have the power to go and accomplish this  
13 intent and now when I look at these different statutes to  
14 determine what my authority is I can now look at them even  
15 broader than what they are.

16 And so that's why I do call it a three-step process.  
17 Number 1, the engineer has to put on his lenses. The  
18 legislative intent, which in my opinion in particular in this  
19 case with respect to Order 1309 is very rose colored, probably  
20 the rosiest there is when it comes to reviewing the statutes  
21 and what they mean.

22 If he puts these glasses on and he sees that a  
23 particular statute might fall within his field of vision, to  
24 him, he can then take it and look at it even broader than what  
25 it would mean when looked at alone. So that's Step 2.

1           And then here with 1309 he took a third step after  
2 putting on his glasses, reviewing the different statutes, the  
3 mosaic of power which I'm going to get to next. And then do  
4 something no statute says he can do. So let's look at the  
5 mosaic of power, and I think it's important that we focus on  
6 what the lawyers are saying which we're going to do first.

7           THE COURT: And this is slide?

8           MR. BALDUCCI: This is Slide Number 6.

9           THE COURT: Okay.

10          MR. BALDUCCI: It's important to look at this mosaic  
11 of power that the lawyers have come up with, but next we're  
12 going to look at what the engineer says his power was. So  
13 let's look at what his lawyer said. And, in fact, not just his  
14 lawyers but also the lawyers he's now settled with and told  
15 this Court about today; okay?

16          So let's start with the mosaic of powers that the  
17 Water District talked about. Mr. Taggart talked about it. I  
18 think Mr. Taggart did an excellent job cobbling together  
19 various statutes to try to come up with it, and I think as he  
20 explained these are different swatches, and when you look at  
21 the swatch alone, it may not mean a lot but when you put them  
22 all together, you can see the entire tapestry.

23          And that's why I have picture here of this cat and  
24 the stoplight and the A and the 2; okay? This is the tapestry  
25 that not even a parent would be proud of. If you tie them all

1 together, it doesn't say what they want it to say. They have  
2 to try to cobble these things together and say, okay, let's  
3 read all these together. Let's merge them into one. Let's  
4 just -- let's not just look at one chapter, let's span three  
5 different chapters. And then apply the legislative intent to  
6 mean we can do even more than what it says.

7           That's not how it works. And that's why I started  
8 with this case really isn't any different than any other  
9 petition for judicial review for an administrative agency  
10 you've ever had before you or will ever have before you.

11           There's one question to decide here. Is there a  
12 statute or administrative code that says, dear engineer, you  
13 can, as I like to call it, deletion by delineation. There's  
14 nothing. He can designate basins. In fact, my client's  
15 basins, Garnet and Black Mountain, those are designated. But  
16 he can't delete my boundaries. He can't -- I need to know what  
17 sandbox I'm in.

18           I mean -- and here's deal. I just want to be clear  
19 because this came up a few times. I agree that the engineer  
20 can manage on a basin by basin level and the way that they have  
21 been forever. Certainly longer than I've been around. But he  
22 can't throw us into the unified school district. He can't do  
23 that. There's no statute that says he can do it.

24           So let me just cover some of these. I don't want to  
25 be too repetitive, but I probably will be for which I

1 apologize.

2           On the top, the five bullet points are some of the  
3 statutes that Mr. Taggart, the Water District, had cited and  
4 below was what the engineer's lawyers said. So I'll just hone  
5 in on that for a moment. NRS 532, 534.120, real naked; okay?  
6 1309 doesn't look like a rule. It's not a rule to delete my  
7 lines. 532.167, duty to perform estimate around water  
8 investigation. Okay. Cool. That's great. You can go pump  
9 water, investigate and see what it does with the flows. That's  
10 fine. I don't have a problem with that. Doesn't say you can  
11 delete my lines. Doesn't say you can throw me in a big pool.

12           532, 534.110 doesn't say he can do what he did.

13           53403 -- I think I switched those around. One is how  
14 you designate basins which he did for Black Mountain and  
15 Garnet. Can't delete my lines though. And then 533.024, I  
16 guess I switched them, manage conjunctively, which again is a  
17 point I'm not going to repeat. I think CSI's attorneys did an  
18 excellent job yesterday distinguishing between joint and  
19 conjunctive. So I'll defer to them on those authorities and  
20 arguments.

21           THE COURT: Let me just ask you a question.

22           MR. BALDUCCI: Yes.

23           THE COURT: So I know that you say that, you know, it  
24 says manage conjunctively, not jointly. What is your position  
25 as far as whether or not the State Engineer can take into

1 consideration the connectivity between the basins and then  
2 within the basins, you know, it -- what -- a decision in one  
3 basin may affect a decision in another basin. What is your  
4 position on that? Do you think he has the power to do that?

5 MR. BALDUCCI: As long as I'm only dealing with those  
6 in my basin, that's okay. I just want to know who I'm playing  
7 pool with.

8 THE COURT: Okay. But some of the connectivity  
9 issues from the basin next door may affect what happens in your  
10 basin. Do you find that he has the power to do that?

11 MR. BALDUCCI: Through the curtailment process.

12 THE COURT: Okay.

13 MR. BALDUCCI: So up there is what the engineer's  
14 attorney said, and what's more to the point, look at what the  
15 engineer said himself in his own order, 1309.

16 THE COURT: And this is Slide 7?

17 MR. BALDUCCI: This is slide -- yes, this is Slide 7.  
18 The engineer we see he starts out with the legislative intent,  
19 and this is where, I believe this is when he's putting his  
20 glasses on to read these statutes broader than can or should be  
21 read.

22 He then goes on to the one thing we agree with,  
23 534.020, the water belongs to the public. I agree. No problem  
24 with that.

25 Slide 8, 532.120, rule making. Okay. Sounds good.

1           534.110, his investigation. All right. Although he  
2 does go on to tell us, and if there is a finding as set forth  
3 in the proceeding whereas he may restrict withdrawals to  
4 confirm priority rights. I really hope he's saying he's going  
5 to put me through the curtailment process. I hope that's what  
6 he's saying. I'm not sure, not sure anyone's really sure.

7           And he goes to 534.030, designating basins. Okay.  
8 That's great. It's in a footnote. Not sure what that means.

9           And then he repeats 534.110.

10           This is the authority the engineer said he had when  
11 he entered 1309 before any lawyers, that I'm aware of, got  
12 involved in this courtroom. This is what we need to evaluate  
13 when ascertaining did the engineer have the authority to do  
14 what he did as opposed to relying on ad hoc, postlawsuit stuff  
15 that lawyers, that are very creative and very intelligent, came  
16 in and made up. The engineer either had the authority or he  
17 didn't.

18           I want to move on to the next slide, Slide 9. This  
19 is something, I guess, another thing that the engineer and I  
20 actually agree on. 1309 is the order that tells us what these  
21 boundaries are and what happens. And I want to deal with this  
22 very briefly. I don't think it's worth a lot of lip service.  
23 The concept that we should have appealed 1303, 1169, 999. I  
24 don't know.

25           Let's focus on 1303. It's an interim order, by its

1 very term, it's interim. It's not final. It's subject to  
2 change, rescission, which is actually what happened here,  
3 withdrawal and modification. Anybody seeking relief on that is  
4 basically looking for an advisory opinion, which we all know  
5 are not appealable. And even then look around this courtroom  
6 and how many lawyers there are from all across the state.

7           If there was a basis to move to dismiss any of these  
8 petitions on lack of timeliness, you can absolutely, 100  
9 percent guarantee that would have happened. The fact that no  
10 one did that tells us the one unspeakable truth we all  
11 acknowledge that appealing from 1309 was the proper way to  
12 raise each and every one of the issues that are presently  
13 before you. And I just wanted to blow it up on the screen. I  
14 know you've seen it a million times, and I've said it at least  
15 probably 11 from Order 1309, SEORA 66. This is where he says,  
16 I'm delineating you all as one single basin. This is why  
17 everybody appealed 1309.

18           THE COURT: This is slide?

19           MR. BALDUCCI: This is Slide 10.

20           THE COURT: Okay.

21           MR. BALDUCCI: And I'll be moving to Slide 11. This  
22 is also part of Order 1309, and I raise this because I heard  
23 some in passing, some a little more forceful that hold on,  
24 Judge. Hold on. Hold on. Prior appropriation isn't here yet,  
25 and we don't know the priority. We don't know whether we're

1 going to do it by day. Maybe we'll mix up the basins. Maybe  
2 we'll do something else.

3 That's for another day, Judge, don't you decide.  
4 Okay. That's bologna. That really is. It's just a way to try  
5 to get you to not make a decision on this core issue that we  
6 believe the engineer made a massive mistake on. Because in  
7 1309 what he's saying, he's telling all of us, hey, all  
8 applications for movement of existing ground water rights,  
9 yeah, you got to process them here. How are you going to  
10 process them? How are you going to figure that out? What are  
11 you going to do? This isn't something for down the road. This  
12 is here. This is today. This is before you.

13 Going on to Slide 12, and I pulled this from Order  
14 1303. It's rescinded. It's no good. I get that. But I think  
15 it tells us what the engineer was thinking and where he may be  
16 going, okay.

17 He tells us in Order 1303 -- again, rescinded, no  
18 good -- that the water rights in this White River Flow System  
19 will be administered based on their respective date of  
20 priorities in relation to other rights within the other  
21 regional groundwater unit.

22 What does that tell us? He's already said back in  
23 1303, years ago, hey, yeah, you're going to go (indiscernible)  
24 prior appropriation, but in this massive basin, right, deleted  
25 the lines by delineation.

1           What does that mean? That means a lot for me. In  
2 Black Mountain, Dry Lake is right holder one, two and three.  
3 You compare me to all the others, I'm way down the list. He  
4 need only take a look at the chart that Mr. Robison circulated  
5 yesterday that was in the record SEORA 8511, 8512 to see -- I  
6 don't even think Dry Lake shows up on the first page. We're  
7 way down on the bottom.

8           Order 1309 effectively curtails my client's rights.  
9 It is very damaging to my clients.

10           If you have any questions for me, I'm happy to answer  
11 them.

12           But I'll leave with the thing I've said 13 times. My  
13 view, this is deletion by delineation which is not authorized  
14 by any statute. The order is void, and this Court should enter  
15 an order saying 1309 is void.

16           Thank you.

17           THE COURT: Okay. I think, Mr. Lake, you're up next.  
18 So, yes.

19           And you don't have a PowerPoint?

20           MR. LAKE: I don't.

21           THE COURT: I mean no pressure. I just wanted to  
22 make sure just for my clerk's sake.

23           MR. LAKE: If you would like a PowerPoint, I can put  
24 my slides from Monday back up.

25           THE COURT: No, that's okay.

1 MR. LAKE: But I'd rather simply state our case and  
2 not worry about what slide I'm on.

3 THE COURT: Absolutely. The old-fashioned way.

4 MR. LAKE: Yeah.

5 THE COURT: Okay.

6 **ARGUMENT FOR CENTER FOR BIOLOGICAL DIVERSITY**

7 MR. LAKE: I'm going to try to be brief here. I  
8 think we share a lot of commonalities with some of the  
9 arguments -- well, arguments that were made yesterday, and, you  
10 know, there's one particular interest here that the Center  
11 uniquely represents, and that's the Moapa dace. So I'm going  
12 to focus on that.

13 I'm going to start with Order 1303. That's  
14 essentially why we're all here. The State Engineer entered  
15 Order 1303, decided to have this is fact finding proceeding,  
16 which precipitated the hearing, although he had some reports,  
17 all the evidence and Order 1309.

18 What the State Engineer said in Order 1303 about why  
19 we were doing this in the first place I think is worth noting,  
20 and that's on record on appeal, page 70. The State Engineer  
21 said,

22 This interim order aims to protect existing  
23 senior rights and the public interest in  
24 endangered species and to limit development  
25 actions that are dependent on a supply of water

1           that may or may not be available in the future.  
2           So protecting existing senior rights in the  
3           public's interest in the Moapa dace.

4           And we think Order 1309 takes some positive and  
5 necessary steps toward achieving both of these purposes, up to  
6 and including joint administration of the various basins,  
7 however you characterize that. From what I've heard, it sounds  
8 like basin by basin or joint administration is largely a form  
9 over function, a distinction without a difference.

10           You know, I think it's telling that we haven't really  
11 heard a clear answer to the question of, well, can the State  
12 Engineer curtail in Coyote Springs Valley to protect surface  
13 water rights in the Muddy River Springs area? And our position  
14 is that whether you consider that a joint management decision  
15 or a basin by basin decision, the answer to that question has  
16 to be, yes, ultimately because of the interests at stake in the  
17 Muddy River Springs area and the Muddy River Decree, which I'm  
18 sure Mr. Dotson is going to talk about. I sure hope he will in  
19 a few minutes and the Moapa dace.

20           So for the sake of brevity, I'm just going to jump  
21 into the 8,000 acre-foot cap as it relates to the Moapa dace in  
22 the Muddy River Springs.

23           We talked a lot about the standard of review.  
24 Basically what the standard of review says is an administrative  
25 agency, when it makes a decision, it has to provide a rational

1 explanation for that action. It has to draw a connection  
2 between the facts found and the choices made. And while  
3 Order 1309 takes some very positive steps toward recognizing  
4 the problem and addressing the problem, ultimately it fails to  
5 do that thing. It's internally inconsistent. It says it's  
6 going to do a thing. It says it's going to protect senior  
7 rights and the public's interest in the Moapa dace.

8           Ultimately, it declines to do what by its own terms  
9 it says is necessary to do those things. This doesn't call all  
10 of the order into question, and I'm going to address remedies  
11 at the end of my presentation, but it does raise some issues  
12 that do need to be addressed by this Court.

13           So why -- why is 8,000 too high? Well, let's go  
14 through the facts. The Lower White River Flow System is  
15 unique, and we've heard a lot about this. I don't think this  
16 can be emphasized enough. There's concern, and I think this  
17 applies equally to our argument about limiting pumping as it  
18 does to the State Engineer's authority because, you know, if  
19 8,000 is too high, we're looking at a tighter restriction than  
20 is already in place.

21           But, you know, to assuage the fears that this is  
22 setting some kind of statewide precedent, I think it's helpful  
23 to look at the factual basis behind the State Engineer's  
24 decision and talk about this very unique nature of the Lower  
25 White River Flow System.

1 First, you have generally low recharge. It's also  
2 variable over time. So and then this hasn't really been  
3 addressed in detail in these proceedings in court, but what was  
4 found below is that most of the time, most years, there is no  
5 recharge to the system. Most precipitation doesn't make it  
6 into the aquifer. It's only in years where we have above  
7 average precipitation and really, you know, extraordinary  
8 years, like 2005, where you can look at these hydrographs that  
9 we've been looking at all week and -- excuse me.

10 THE COURT: My bad.

11 MR. LAKE: Okay. You can look at these hydrographs  
12 and actually see the levels rise.

13 So recharge is low and recharge is variable. You  
14 have the remarkably flat and transmissive aquifer that's  
15 feeding the Muddy River Springs and providing habitat to the  
16 Moapa dace.

17 There's been some discussion about heterogeny in the  
18 system and maybe the system is heterogenous. So if you -- if  
19 you pump in one place, it's not going to effect the dace, but  
20 that doesn't really reflect the evidence. There was a  
21 distinction drawn in the hearing between having geologic  
22 features that affect the transmissivity to 1 degree or another,  
23 having water flowing in 1 degree or another and the  
24 connectivity. And the connectivity is what's important. And  
25 nothing that's been presented here refutes the conclusion that

1 this system is interconnected. The system my -- so Coyote  
2 Springs tries to characterize a separate flow path.

3 Now, first of all, one expert agreed with that  
4 conclusion at the hearing. It was Coyote Springs' expert, and  
5 we've heard a lot about how this Court isn't supposed to be  
6 reweighing the evidence.

7 THE COURT: So I see Mr. Herrema.

8 MR. HERREMA: Herrema, yes.

9 THE CLERK: Yeah.

10 MR. HERREMA: Your Honor, this is the time for the  
11 Center to be addressing its response to the opposition by the  
12 State Engineer to its challenge, not to be taking on CSI's  
13 positions.

14 MR. LAKE: Your Honor, two points. This is the  
15 Center's time to rebut arguments that have been made by the  
16 other petitioners. Also, to the extent that we argue based on  
17 impacts from pumping to the Moapa dace, that the limit should  
18 be lower, which is the basis for our petition, we should be  
19 able to address evidence that's contrary to that position.

20 MR. HERREMA: This is their reply to the --

21 THE COURT: To the State Engineer.

22 MR. HERREMA: Correct.

23 THE COURT: So I would ask you to limit your comments  
24 to the State Engineer, what you disagree with. As far as if  
25 the -- let me think about this.

1           If the findings of the State Engineer are -- or  
2 actually, if what was presented in the State Engineer's  
3 answering brief touched on what you are talking about, then I  
4 think it's fair game, but I'm not sure that it did.

5           MR. LAKE: Okay.

6           MR. HERREMA: Thank you, Your Honor.

7           MR. LAKE: I'm just going to continue with the  
8 discussion of the aquifer, setting aside what the issue with  
9 Coyote Springs' presentation.

10          THE COURT: So you were actually talking about the  
11 fact that the connectivity is the most important part.

12          MR. LAKE: The connectivity is the most important  
13 part. The State Engineer did recognize that. And I guess this  
14 goes back to the order being internally inconsistent because  
15 all these things were recognized. I'm just reciting them to  
16 establish essentially the foundation of what we're going to  
17 talk about in a second.

18          So connected, transmissive. And at the end of the  
19 system, you have a fully decreed water source. So all the  
20 water rights in that system are, you know -- every bit of water  
21 in the Muddy River has been appropriated by decree.

22          And finally you have this endangered, very site  
23 specific, very endemic species in the Moapa dace. And it's  
24 important to consider I think the difference between -- the  
25 differences and the similarities between the Muddy River Decree

1 and the Moapa dace here in terms of the interest.

2           You know, naturally protecting the natural spring  
3 flow of the Muddy River also protects the dace. So there is to  
4 some degree a coincidence of those interests; however, as I  
5 clarified on Monday, the Moapa dace is dependent on these high  
6 elevation spring flows that are far more vulnerable to pumping  
7 impacts than the flow of the Muddy River as a whole.

8           And I think that calls for a consideration  
9 specifically of how pumping is going to impact the spring  
10 flows, not the overall river flow, but the individual spring  
11 flows from the Muddy River Springs.

12           The State Engineer also acknowledged in Order 1309  
13 the need to maintain at least 3.2 CFS. I'd like to talk about  
14 this for a second as well. You know, there's a concept in ESA  
15 case law called historic range where you look at the where a  
16 species has historically existed compared to where it exists  
17 now.

18           And it's one factor in determining whether a  
19 species -- and this is highly litigated. So if you go to the  
20 case law it's going to be all over the place, but the basic  
21 concept is you can look at the historic range compared to the  
22 current range and look at what impacts, you know, the degree of  
23 impacts occurring to the species. And here with the Moapa  
24 dace, you see that historic Warm Springs west flows are around  
25 4.0 CFS.

1 THE COURT: So I need you to translate that for me.

2 MR. LAKE: Okay. This is the flow of the stream at  
3 the Warm Springs west gage, and this is the gage that collects  
4 the flow from all of the higher elevation springs.

5 THE COURT: So you're just saying then that  
6 historically at the west gage area, the flow was at 4.2 CFS,  
7 and that is part of the habitat conditions that help it  
8 propagate?

9 MR. LAKE: Yes. And at the time the dace was  
10 abundant in the system, those are the kind of flows that were  
11 occurring. That's the baseline.

12 3.2, you know, while 3.2 is important to, you know,  
13 given current conditions, and we would argue that it's  
14 absolutely, you know, a necessary floor to maintain here, it is  
15 not the baseline. 3.2 is already a 20 percent loss in spring  
16 flow. And I discussed on Monday that the relationship, the  
17 direct relationship between spring flows and habitat loss. So  
18 with all of those reductions in spring flows you're also seeing  
19 an equivalent habitat loss.

20 Now, there is consensus among experts at the hearing,  
21 at least those that address the dace, not all experts talked  
22 about the dace, but those that did recognize that 3.2  
23 absolutely needs to be maintained. And this was -- this was  
24 somewhat of a revision of what was understood before. Again,  
25 the pumping test gave us new information about how this system

1 behaves.

2           One of those pieces of information was that when you  
3 pump from this aquifer, it doesn't recover. It doesn't come  
4 back up. You're not going -- simply stopping pumping or  
5 reducing pumping isn't going to lead to a restoration of  
6 prepumping spring flows. And this is different than a lot of  
7 other aquifers in the State. In, you know, your typical  
8 alluvial basin aquifer, what I'm talking about, like a  
9 precipitation fed aquifer in a basin, I mean, you give it time  
10 to recharge, and the levels come back up.

11           In this system, we're seeing a different kind of  
12 behavior. And that's significant because it means that if you  
13 drop below that 3.2, you know, that could very well be a  
14 permanent loss to the species. We don't really know how to  
15 recover that.

16           You know, we've had some arguments in relation to a  
17 decree about predevelopment flows. Mr. Dotson said, you know,  
18 nothing in 1309 tells us how we're going to recover to  
19 predevelopment flows, and that's true.

20           And on the other side, CSI says there's no need to  
21 recover predevelopment flows. But the consensus there is that  
22 we're not -- once it's removed, it's not coming back.

23           So that is the basis for maintaining 3.2 as set out  
24 in Order 1309, not the MOA, which came before the pump test,  
25 which came before we had this information, and not any of the

1 analyses -- any other of the analyses that were done before the  
2 pump test. The pump test really changed the playing field here  
3 with regard to spring flows and the impacts of pumping.

4 Another thing that's not in dispute is the continuing  
5 decline in spring flows, and this is acknowledged by the State  
6 Engineer both in Order 1309 and in the State Engineer's  
7 briefing on appeal. Just to be specific, at Record on Appeal  
8 58, in Order 1309, the State Engineer says,

9 Water levels may be approaching a steady  
10 state, but the trend is of insufficient duration  
11 to make this determination.

12 In briefing, the State Engineer also says,

13 Data from some Lower White River Flow  
14 Systems (indiscernible) cut against the  
15 conclusion that the system is at equilibrium.

16 A downward trend in these wells is acknowledged.

17 And finally, the State Engineer concludes:

18 A continuing monitoring of groundwater is  
19 necessary to determine whether further  
20 reductions in maximum pumping are required.

21 And this is where Order 1309 becomes internally  
22 inconsistent. Because the State Engineer has established  
23 what's necessary to protect the dace and what's necessary to --  
24 we have to maintain spring flows 3.2.

25 But then the State Engineer fails to do anything in

1 Order 1309 to maintain the spring flows at 3.2. The State  
2 Engineer says essentially we will maintain spring flows by  
3 monitoring and adjusting. That is not substantial evidence.

4 And I'm going to discuss the *Eureka County* decision  
5 again -- the citation is 131 Nevada 846 -- because I think that  
6 case is very informative about the situation that we have here.  
7 Mr. Taggart pointed out that there are some factual differences  
8 in that case yesterday. We acknowledge those, and there is  
9 no -- this isn't the same situation. The State Engineer isn't  
10 saying we're going to come up with a mitigation plan that does  
11 not yet exist.

12 But what the State Engineer is saying though, and  
13 this is why *Eureka County* is informative, is the State Engineer  
14 is saying, we don't have the information in front of us right  
15 now. We'll get it later.

16 Well, *Eureka County* said the State Engineer can't do  
17 that. The State Engineer's decision, and I'm quoting now,  
18 "must be made upon presently known substantial evidence rather  
19 than information to be determined in the future." Now,  
20 presently known substantial evidence is that spring flows are  
21 declining. And the spring flows aren't recovering once they've  
22 gone below a certain level.

23 You know, the Court asked me on Monday, you know,  
24 where do we draw the line? And I think that's an important  
25 question. We agree that a line has to be drawn. We think a

1 cap is a good step forward. It's better -- it's certainly  
2 better than no cap at all.

3 But the bottom line is that the State Engineer never  
4 makes a finding that this cap is going to maintain 3.2. The  
5 State Engineer never even says that the system is in a steady  
6 state. The State Engineer acknowledges that there is not  
7 evidence to support the conclusion.

8 Now I don't think it's appropriate for me to stand  
9 here in an appellate proceeding and tell the Court the  
10 appropriate number is. At the hearing, the Center's expert  
11 recommended the carbonate pumping -- no carbonate pumping  
12 should occur if we're going to fully protect senior rights and  
13 flows from the Muddy River Springs area.

14 Now, as myself and Mr. Dotson and Mr. Taggart have  
15 stated, Order 1309 doesn't fully protect those senior rights  
16 and those spring flows, but, you know, that's what we told the  
17 State Engineer below, no carbonate pumping and no more than  
18 4,000 acre-feet of alluvial pumping.

19 I don't think the difference between carbonate and  
20 alluvial is particularly relevant to the current discussion,  
21 but for the record, that was our position below.

22 But that's also I think kind of beside the point  
23 because it wasn't necessary for the State Engineer to come to a  
24 specific conclusion on steady state or equilibrium. The State  
25 Engineer just needed to draw a rational conclusion from the

1 evidence in front of him.

2 THE COURT: So needing -- drawing a rational  
3 connection between the 8,000 and the 3.2?

4 MR. LAKE: Exactly. And the State Engineer found  
5 that 3.2 was necessary. So how do we maintain 3.2?

6 And so and how do we protect senior rights too? So,  
7 you know, it's our position that that could be made. That  
8 decision could be made based on any number of any amount of  
9 factual information in the record. But it can't be made on the  
10 basis that the system is approaching equilibrium because  
11 there's not evidence that the system is going to equalize. I  
12 mean, it could. It could not. The point is we don't know.  
13 There is no presently known substantial evidence.

14 The Court might also wonder, you know, why be so  
15 precautionary. Is there really -- is there really a  
16 requirement that the State Engineer, you know, honor these  
17 limits so strictly? And our answer is yes.

18 First, the pumping test revealed new information  
19 about the nature of the aquifer, which I already discussed, you  
20 know, and before the pumping test, we thought, everybody  
21 thought well, you know, this is not necessarily a permanent  
22 impact. Flows could recover. But what the pumping test told  
23 us is that, oh, it called that into question. It said, no, the  
24 levels aren't recovering. It looks like we have some degree of  
25 permanent loss to storage as a result of the pumping test.

1           So, you know, that changes the calculation. That  
2 means that the State Engineer does have to consider the fact  
3 that if we drop below that 3.2, it might not get back up above  
4 that 3.2 again. We're certainly not getting back to 4.0, where  
5 it was initially.

6           And, you know, the State Engineer's duties in this  
7 regard, again, are, you know, various. But due to the public  
8 ownership of water, the State Engineer is acting in the  
9 capacity of a trustee, a trustee, who according to the express  
10 language of the Nevada Supreme Court in the *Mineral County*  
11 decision has to maintain the trust for future generations.

12           Now, allowing a permanent depletion of this water  
13 source to the detriment of communities, businesses and of this  
14 endangered species is not maintaining the trust for the benefit  
15 of future generations. And that's why the State Engineer has  
16 to be precautionary here.

17           If we are actually too in a long-term drought, as  
18 some parties have argued here, you know, the Center hasn't  
19 taken a position on this. We have observed that there were  
20 some above average precipitation years following the pump tests  
21 that probably buffered the amount of decline to make it look --  
22 to make it be less than it normally would be.

23           But if we are indeed in a long-term drought and  
24 there's a long-term drying trend, this only argues for more  
25 caution. It means that, you know, the State Engineer was

1 correct in 1309 to say that he can't control climate. He can  
2 only control pumping. And if climate is going to have an  
3 adverse impact here, that only means that we need to control  
4 pumping even more to protect these substantial interests in the  
5 Muddy River Springs area.

6 And that is, in light of Mr. Herrema's objection, I  
7 think that's the extent of my presentation.

8 THE COURT: Okay. Thank you, Mr. Lake.

9 All right. Next step we've got Muddy Valley.

10 MR. DOTSON: Court's indulgence. It might take a  
11 moment. I don't know.

12 (Pause in the proceedings.)

13 MR. TAGGART: Your Honor, while he's doing that can I  
14 give you the -- or give the clerk the documents from yesterday?

15 THE COURT: Go right ahead.

16 (Pause in the proceedings.)

17 **ARGUMENT FOR MUDDY VALLEY IRRIGATION COMPANY**

18 MR. DOTSON: Good morning, Your Honor. There is no  
19 way that I would use the hour and 55 minutes allotted. I would  
20 like to start, and I'll probably conclude with joining my  
21 colleague and thanking you, and Mr. King has asked me to thank  
22 you as well.

23 It's been clearly obvious to all of us in the room  
24 that you have read the briefs, that you've grappled with this  
25 issue, and we really appreciate your informative questions and

1 your time.

2 This is the time for my rebuttal argument. That, as  
3 I understand the ground rules, and, you know, I will be to  
4 respond to the defense from the State and also to respond to  
5 the statements of some others that have spoken --

6 Well, that's not working.

7 THE COURT: That spoke in the intervenor part.

8 MR. DOTSON: That spoke in the intervenor in a  
9 position contrary to ours to what we have advocated.

10 It's totally locked up.

11 (Pause in the proceedings.)

12 MR. DOTSON: All right. Sorry about that. I think  
13 when I switched --

14 THE COURT: And this is slide?

15 MR. DOTSON: This will be Slide 2.

16 And, in fact, Your Honor, I think what we -- what was  
17 telling about the State Engineer's presentation was the absence  
18 of a direct response.

19 Now, there are briefs, and those are certainly part  
20 of the record, but we're here for oral argument. And at least  
21 with regard to oral argument, candidly, and we're going to talk  
22 about some of these things, the response from other parties was  
23 stronger in contradiction to the positions that we have  
24 asserted and advanced on behalf of Muddy Valley Irrigation  
25 Company than that of the State Engineer's.

1           But definitely certain parties it would seem, seek to  
2 limit MVIC's decreed rights. The irrigation company is not  
3 going to allow that to happen, at least that is their goal.  
4 That is my job.

5           And to be clear, this proceeding, as I understand it,  
6 is a petition for judicial review. When I referred to this  
7 proceeding, that was my intent. It wasn't 1303 or the 1309  
8 hearing. I understand that conceptually this isn't a  
9 continuation of that same legal conduct or this same string of  
10 decisions, but this proceeding is insular and discrete insofar  
11 as there's a record that has been identified. There are issues  
12 that have been raised in however many petitions for judicial  
13 review -- seven I think, something like that -- and the  
14 intervening briefs as well. And that's what's at issue, as I  
15 understand it, in this proceeding.

16           In this proceeding, in our petition for judicial  
17 review filed by MVIC, it did invoke the decree. It's all over  
18 our petition for judicial review. So and I think it's clear  
19 when you look at the record that -- and it should be important  
20 that the decree was important in the consideration of the  
21 issues that are up on review. So I don't think it's -- and I'm  
22 not saying anybody is claiming a surprise on this, but it isn't  
23 a surprise.

24           Now, this was not an original action in the decree  
25 court. I would agree with that, but our arguments, as I hope

1 have been clear, and apparently maybe they haven't been, are  
2 grounded in the decree, and our arguments have remained  
3 constant and have remained the same.

4 Now, as I conceded, I think, both in the briefs and  
5 in oral argument here this week, the ruling that came out from  
6 the State Engineer was enlightening for my client that maybe he  
7 couldn't -- he -- it could not rely upon the State Engineer to  
8 the extent that it had. But that's a long ways from a  
9 position -- excuse me, Counsel -- suggested by Vidler  
10 yesterday, which happens to be a shareholder, that if we are  
11 seeking to benefit from the decree, we need to file an original  
12 action.

13 The whole purpose of the statute that, well, what we  
14 would argue, the primary purpose of the statute that directs  
15 the State Engineer to do nothing, that injures the decree or  
16 injures a decree or a Court order -- and we'll get to that in  
17 specifics -- is to prevent and avoid every party who has  
18 decreed rights having to enter an action whenever they think  
19 those rights may be in jeopardy. They shouldn't have to have a  
20 District Court action in the decree court to enforce the decree  
21 when they think there may be a problem in the future.

22 THE COURT: So let me ask the question. Because when  
23 you're talking about decreed rights, you're talking about  
24 really the conflict of rights; correct?

25 MR. DOTSON: I am talking about any water right that

1 has been adjudicated by a District Court in an actual decree or  
2 order.

3 THE COURT: Oh. So I know that that's the basis --

4 MR. DOTSON: So I'm speaking generally.

5 THE COURT: So but what I'm talking about is when you  
6 are saying that you are invoking the decree for this Court to  
7 make decisions on, that is part of the conflicts analysis; is  
8 it not?

9 MR. DOTSON: It is insofar as it seems clear to us  
10 from the record below that the State Engineer made the  
11 determination that there was an impact and therefore a conflict  
12 with the decreed rights, that not all of the decreed rights  
13 were being delivered, and therefore there must be a  
14 determination as to what pumping, assuming it was pumping that  
15 was causing the conflict, and he found that as well, is  
16 actually causing that conflict and what we can do about it.

17 THE COURT: So this is really only to the limited  
18 issue of the conflicts analysis that's within the decree that  
19 you are saying is -- that was outside the scope of this  
20 proceeding; correct? So when you're talking about -- when  
21 you're talking about asking the Court to make a decision about  
22 the rights about the decree that you have, that is based on the  
23 limited scope of the portion of 1309 that the Nevada State  
24 Engineer made -- did a conflicts analysis saying, you know,  
25 it's not affecting the Muddy Decree River rights or whatever

1 along those lines; is that correct?

2 MR. DOTSON: Right. Exactly. Exactly. What we're  
3 saying is that the -- well, actually, let's go -- I think  
4 actually what I'm going to say next is going to be helpful, and  
5 we are now at Slide 2, 3, 4, 5. I guess I should have written  
6 the numbers on this.

7 So to be clear --

8 THE COURT: What slide is this?

9 MR. DOTSON: This I believe is Slide 5.

10 THE COURT: Okay.

11 MR. DOTSON: So he's wrote 5. This is 5.

12 MVIC contends that, and I think this kind of goes to  
13 the issue you're raising, that the Nevada State Engineer cannot  
14 modify the decree. In fact, nobody can modify the decree. We  
15 don't think you can modify the decree. That period to do so  
16 has passed.

17 And we're not suggesting that 1309 does that. It  
18 acts to do that. It's not literally modifying the decree. He  
19 cannot modify the decree. And, in fact, I think Nevada state  
20 law now and public trust doctrine being in -- and being  
21 consistent with that has identified in *Mineral County versus*  
22 *Lyon County*, that Stiglich opinion, that, and this is a portion  
23 that Vidler's counsel cited to, has identified that those are  
24 consistent. I cited to it in my opening as well. That even  
25 considering the public trust doctrine, even considering that

1 the water is owned by the public, and the public has an  
2 interest in it, the public's interest is served by the  
3 certainty in the understanding of prior appropriation. These  
4 concepts and the statutes that are built upon them are in  
5 harmony.

6 And so the reason why we filed our petition for  
7 judicial review is because we read 1309 as running contrary to  
8 those established rights from the decree, which it cannot do.

9 And so we sought this petition review, which happens  
10 to also be with the decree court, which is why I say I invoked  
11 the decree. What I'm saying -- I'm not saying that I filed a  
12 new action here based on the decree. That has not occurred.  
13 And, in fact, my contention is it shouldn't have to, but maybe  
14 it does. But it is -- it has been raised. So I feel like I  
15 had to deal with that.

16 Now we're at Slide 6 consistent with the argument we  
17 just said.

18 MVIC is not asking for a modification to the decree;  
19 however, it was notable that when Vidler filed this action,  
20 their petition for judicial review -- they originally filed in  
21 Lincoln County. The Court I know is aware of this.

22 THE COURT: I think I actually just read the opinion  
23 again last night. So I'm fully aware of --

24 MR. DOTSON: Okay. So you know -- well, that's what  
25 I was going to ask you to do.

1 THE COURT: No. I already read it last night.

2 MR. DOTSON: Thank you.

3 Moving to Slide 7. MVIC's position differs from  
4 SNWA, and MVIC did not adopt the SNWA positions below. I want  
5 to refer you to exactly where in the record we have our report.

6 So the report and the portions -- the report starts  
7 at record on appeal 39714. It's very short. And ends at  
8 39717, and I would suggest the brevity of this is indicative of  
9 my client's belief that really its involvement in this hearing  
10 was optional. It shouldn't have been necessary at all to be  
11 there, but there are at least three spots on the record on  
12 appeal 39,716 and 717 where MVIC concurs with the discussion  
13 points at certain sections of the Southern Nevada Water  
14 Authority report that I've referred to a number of times in  
15 this case, and it's not coincidental that that has occurred.

16 But I think has been clear, and I would be lying if I  
17 didn't say that as Mr. Taggart borrowed my computer to prepare  
18 and present his report when he was speaking in support of the  
19 8,000 cap, I thought about clicking it off just for fun.  
20 Because we don't agree with that.

21 And there's -- MVIC is much more protective of its  
22 rights than that particular shareholder, and obviously more  
23 protected perhaps than -- well, this is a note from my  
24 colleague and cocounsel Steve King. It's very interesting that  
25 in this room, just to be again clear and transparent, there are

1 five shareholders of my client: The LDS Church, Vidler, Coyote  
2 Springs Investment, SNWA and Moapa Valley Water District.

3 So what are those rights that each of those  
4 shareholders we just described have a certain percentage  
5 interest in. They are to the Muddy Valley Decree, and to those  
6 decreed waters. And I have in the past referred to the Decree  
7 and really mostly the holdings, but I want to also direct the  
8 Court that it's interesting maybe to read at the beginning of  
9 the Decree the stipulation that is contained therein because it  
10 is in that stipulation that the parties who are actually  
11 litigating this case in the Muddy Valley Irrigation Company is  
12 the plaintiff in that case are recognizing even in the  
13 stipulation this prior appropriation concept, the fact that the  
14 water was put to beneficial use in all instances of these  
15 people and entities before 1905.

16 Oh, I thought there was an alarm.

17 THE COURT: Oh, no, no. It's just the --

18 MR. DOTSON: And -- sorry. I lost my train of  
19 thought.

20 THE COURT: You were saying that the water was put to  
21 a beneficial use before 1905.

22 MR. DOTSON: And it also recognizes the rights and  
23 the usage of the Muddy Valley Irrigation Company, as I've  
24 described here and this -- this two-tier type circumstance,  
25 these two specific type of grants.

1           Now, in the stipulation not all the water had been  
2 included, because the order, as you recall, includes certain  
3 certificates. At least this is my understanding.

4           I will tell you that I have -- I found it -- this  
5 case is so historical, right, and I find it interesting that I  
6 stand in the shoes, and I stand on the shoulders really of this  
7 guy named A.S. Henderson, who represented the Irrigation  
8 District and who no doubt negotiated that stipulation. And  
9 candidly I'm trying just not to screw anything up that he did  
10 because what he did was he preserved and he placed in a decree  
11 in an order rights that have already stood for over a hundred  
12 years and hopefully will stand for hundreds of years in the  
13 future. And that is the concept of prior appropriation, Your  
14 Honor.

15           The fact that -- and it is consistent with the public  
16 trust because it is important for planning, for future  
17 generations, whether it's an individual. Now, there's a guy in  
18 here who has part of this water named Knox. One of the lawyers  
19 in the case for the -- though he hasn't spoken -- for the power  
20 company is a guy named Knox. I was ready to get some joke  
21 about Mr. Knox's water. But I don't know who owns that water  
22 now. But the point is that it allows for certainty and that  
23 every one knows how much water it is and that it can be used  
24 for beneficial use.

25           And it was recognized then subsequent to that in

1 statutes. This decree predates the water law that you've been  
2 discussing, predates the statutes that we ask you to look to  
3 and we think are in harmony with this, but it's important that  
4 Nevada's -- that it is appreciated, and I think everybody  
5 agrees that Nevada's water law is based upon common law and  
6 statutory law that hopefully is in harmony.

7 In this instance, it grants to MVIC specific  
8 diversion rates for specific periods of times, the winter and  
9 summer that we talked about in the opening and again the time  
10 to revisit it has long past.

11 Now, I don't think that statute that gave the three  
12 years existed. Obviously it didn't exist at the time the  
13 decree was entered, but even if it was just a -- well, I think  
14 counselor for Vidler said it well yesterday. It's a Court  
15 order. It's a final order. And you can only -- we want  
16 finality in our courts as well.

17 So again, it's a seamless web, which is what the law  
18 is supposed to be. And it plays upon each other.

19 So moving quickly through this, because I know I've  
20 stated it ad nauseam. This is the specific allotment of cubic  
21 peak feet per second, 36.2588. This is what we seek to have  
22 the State Engineer return. This is the remand instructions  
23 that we have asked, which is that you strike that portion of  
24 the decree which is found on page 60 and 61 and remand with  
25 instructions that the State Engineer is to calculate an amount

1 of pumping that can occur without conflicting, which is exactly  
2 where that question that you rose -- you raised I think came  
3 from, without conflicting with those decreed rights, whether by  
4 location and amount, and we'll at least eventually return the  
5 river to its predevelopment decreed flows, whatever that may  
6 be.

7           As a -- we read and so we would ask that you would  
8 strike and then remand with instructions, strike those portions  
9 of Order 1309.

10           As we read the order, the State Engineer made very  
11 clear and supported factual findings about the 36,900 acre-feet  
12 annually of flow in the river predevelopment and the fact that,  
13 which is just stating a fact from the measurements, that the  
14 flow, at least since 2015, at the time of the hearing obviously  
15 had averaged 30,600; thus leaving a deficit of 3,300 acre-feet  
16 annually.

17           But then the State Engineer fails to apply, and this  
18 is the inconsistency where we align very closely with the  
19 Center for Biological Diversity and not as much so with SNWA  
20 where we don't think the math can possibly therefore work out  
21 that you can conclude that there's a deficit in decreed water  
22 rights and yet allow a level of pumping that you acknowledge  
23 may or may not even have reached steady state yet. We need to  
24 do better than steady state to return the decreed flows.

25           And those are the flows that my client has the right

1 to under the decree, the specific allotment and whatever the  
2 flow of the river was. And this is where the geography of  
3 where my client takes on the river is important because we're  
4 at the end. We get what's left, and there's this catchall  
5 phrase that I know others dispute the significance of it, but  
6 from my client's position, it is its understanding that any  
7 water that reaches it at that point it is to put to beneficial  
8 use. I will tell you that they even think it's their  
9 obligation to do so. I don't think the decree sits quite that  
10 hard, but that's what they think.

11 I'm not waiving privilege beyond that point, by the  
12 way, for the record.

13 So what we seek is that this Court's remand provide  
14 instruction that the State Engineer take action to protect the  
15 decreed water rights at 33,900 acre-feet. And those are not  
16 just our rights. Those are everybody's rights on this river,  
17 not just Muddy Valley Irrigation Company.

18 Now --

19 THE COURT: And this is slide?

20 MR. DOTSON: This is -- thank you, Your Honor.

21 THE COURT: We've been going through slides and I  
22 don't believe we've made a record of it.

23 MR. DOTSON: Let's see what slide it is.

24 The last one was 9, and this is 10. And I'll provide  
25 this copy to the Court when I'm done, and I have yesterday's as

1 well.

2           What didn't we hear from the State Engineer even in  
3 response to a question from you, and that was a defense of the  
4 consumptive use analysis and how the State Engineer can legally  
5 apply such a consumptive use analysis in any portion of its  
6 work and holding of 1309 in light of the statute specifically  
7 disallowing such an analysis on the Muddy River.

8           I did not hear, and maybe I dozed off, but I did not  
9 hear, and I was waiting for it, an explanation as to how that  
10 would be appropriate or make sense.

11           I did not hear the State Engineer make that, and I  
12 know the Court asked a question where it was basically  
13 deferred, and I think it was deferred because there is no  
14 explanation as to how it's okay.

15           NRS 533.3703 specifically outlaws that sort of an  
16 analysis to be applied to these waters. Here's the provision  
17 in the section. This is Section 2. These provisions of this  
18 section do not apply to any decreed, certificated or permitted  
19 right to appropriate water which originates in the Virgin River  
20 or the Muddy River.

21           Now, Vidler seemed to suggest that that was all right  
22 and that some analysis in that regard should be done. And it  
23 seems transparently obvious that the reason why any party would  
24 be a proponent of this is to reduce the amount of water that  
25 MVIC and others holding water on the Muddy River and through

1 the decree are allowed to use and to change the calculation.

2 And it's a multistep. You have to, you know, do that  
3 first so that you can either segment it by basins or do some  
4 sort of a budget analysis. I don't prepare -- I don't pretend  
5 to understand exactly where it's going, and I don't need to.  
6 All I need to know is that you can't do it. And so any  
7 analysis that allows a justification for a reduced sum to be  
8 delivered of decreed water rights is improper and illegal.

9 Now, we're at Slide 11, Your Honor, prior  
10 appropriation. First in time, first in right.

11 THE COURT: Well, let me ask a really quick question.

12 MR. DOTSON: Please.

13 THE COURT: So, you know, I know they you have this  
14 sum of 33,000 -- is it 900?

15 MR. DOTSON: 900. That's the predevelopment decreed  
16 flows.

17 THE COURT: Okay. And I know that there were some  
18 different calculations that were done by Coyote Springs and  
19 Vidler regarding -- because it sounds like you're looking at  
20 historic grants of water and the way that they calculated water  
21 then. And now we have different ways of calculating that  
22 water. Can you kind of walk me through that a little bit as  
23 far as how it relates to the predevelopment flows.

24 MR. DOTSON: I will. I will. To the best of my  
25 ability.

1           And again, there are -- there's different submissions  
2 of evidence in this regard, but the -- oh, I grabbed the wrong  
3 thing.

4           The --

5           THE COURT: And just to be clear, so the  
6 predevelopment flow number that you have is based on your  
7 calculation; is that correct?

8           MR. DOTSON: No.

9           THE COURT: No. Okay.

10          MR. DOTSON: So the 33,900 comes from page 61, I  
11 believe, of the decree. This is the State Engineer's  
12 conclusion. And indeed I think I mentioned earlier --

13          THE COURT: The decree or the --

14          MR. DOTSON: Or on the order of 1309. It came from  
15 1309. And the State Engineer, I argue that number -- I've  
16 argued in this proceeding that that number is supported by  
17 substantial evidence.

18          THE COURT: Okay. But that is also -- I mean, I  
19 guess what I'm trying to get at is this number, the 33,900 is  
20 based on taking prior historic sort of ways of calculating  
21 water and then trying to, you know, put that in more modern  
22 terms. Is that correct?

23          MR. DOTSON: Well, sort of and not really.

24          THE COURT: Okay.

25          MR. DOTSON: Let me -- I'm going to direct you to --

1 well, first I'm going to explain where I think it came from.

2 THE COURT: Okay.

3 MR. DOTSON: And because I've got an hour and  
4 20 minutes. I'm not going to need it all, but we can  
5 definitely take some time here to have a discussion.

6 THE COURT: Okay.

7 MR. DOTSON: The 33,900 is found at 1309 and in  
8 Order 1309, and it is a number arrived at by the State Engineer  
9 that we have argued in this case is supported by substantial  
10 evidence. I've alluded to the fact that we may withdraw that  
11 position, and I have actually directed the Court to Order 1169,  
12 which was the 2002 pump test order. And in particular to I  
13 think it's Footnote 12 of that order where at that time the  
14 State Engineer Ricci used a 36,000 acre-foot annual number for  
15 the Muddy River. So there are different estimates, and --

16 THE COURT: But it's all based on what was originally  
17 contained in the Muddy Water River Decree and how they measured  
18 the water then?

19 MR. DOTSON: Sure. So, yes. When they litigated  
20 this in the -- well, I guess it would be it's, like, '17, well,  
21 through '20, the -- they had evidence as to how much water was  
22 being diverted at that point in time, and they're basing it on  
23 that, and they're claiming these uses. And, you know, I  
24 haven't read the record that existed. I don't know if a record  
25 exists from that. There's charts at the back that counsel has

1 referred to, and I've read those, and I, in fact in one of my  
2 prior slides, it might have been the middle one I put the  
3 summary of the water that was awarded, and those cubic feet per  
4 second, you can run a calculation over that, but obviously a  
5 river like this in an arid climate is going to vary from year  
6 to year.

7           And so in looking at the record from this proceeding  
8 at 41,930 through 42,029, there is an analysis that describes,  
9 and I'm going to try to find the exact spot, how those SNWA  
10 hydrologists, they used historic data from the period of the  
11 decree and since the decree, and there were criticisms in the  
12 record below of how accurate that is, and there are years where  
13 there's no data kept as to how much water is running through  
14 the river, and we have numbers now, and there's been  
15 discussions of ICS credits in this case. SNWA has made a big  
16 deal about the ICS credits, which are certified every year, and  
17 they're used to determine that intentionally created surplus  
18 that goes into Lake Mead and then is relied upon apparently by  
19 them.

20           And so no doubt, which maybe is what you're asking,  
21 the calculations should be better today than they were in 1920,  
22 though what is funny, and I think this was an anecdote that I  
23 think Mr. Taggart related, which was sometimes using a tape  
24 measure and a stick is a pretty accurate way to figure out some  
25 quantity of anything. And when I was a kid, we used to -- I

1 worked at a service station, and we had a computer, early  
2 computer that tracked how much gas was supposed to be in the  
3 underground storage tanks.

4 But every day, we took a stick, and we dumped that  
5 stick down, and we put on a spiral notebook the amount. And  
6 you know what one was more accurate? The stick, right, because  
7 there's -- you know, I don't know what's happening. I think we  
8 figured out that eventually there were holes in the tanks.  
9 Different story.

10 But here's the thing. They put the water, and  
11 there's been some pictures of this, into a channel at various  
12 points, right, or they -- and when it goes through the channel,  
13 and if the channel -- it depends on the nature of the water  
14 source, obviously, the channel has a known width. I wish I had  
15 a picture I could put up. And then that creates a gage because  
16 you can tell how -- because they know the volume of water that  
17 is now moving through this usually concrete channel. They can  
18 see the height of the water, and then they can record it. And  
19 that's when they were talking about, oh, this has a faulty  
20 transducer and things like that, and so you have --

21 Now, some areas where the measurement is constant,  
22 right, so you have a record, a hydrograph, that's what these  
23 hydrographs are, right, because really, when I was sticking the  
24 tanks back in the '80s, that kind of created a hydrograph  
25 too. It just was of petroleum. And we could see where the

1 tank was. And then when we had to order more gas. Well, it's  
2 the same thing really except now it's a natural thing. It's a  
3 river, and at least this is how I -- now, you're inside my head  
4 knowing how I've been thinking about this, right, but --

5 THE COURT: Well, I mean, in the historic  
6 information, it was more about diversion rates; right?  
7 Diversion rates as --

8 MR. DOTSON: Well, originally it was diversion rates,  
9 but they're still making estimations of how much water is in  
10 the river.

11 Now they know they're using the whole river, and it's  
12 clear from the fact that we had a decree that there started  
13 being disputes over well, you're using water that I've been  
14 using, and I'm no longer getting as much water as I should get.  
15 And really, that's what's referred to yesterday, and I'm  
16 rebutting, which is, well, wait a second. What's your remedy?  
17 Your remedy is you can't go and sue. That doesn't seem very  
18 efficient to my client or to me that you go sue preemptively  
19 before you allow the State Engineer to do its work.

20 But -- let me see if I -- maybe one of these  
21 stickies.

22 Court's indulgence. I'm just going to take a moment  
23 to look at the spot.

24 Okay. So if you look at the beginning of this  
25 report, it starts out with the decree and some historical

1 information, and then we have some reports that are contained  
2 in Section 2. And I want to see. Because one of the things,  
3 and I think I actually cite to this in one of our briefs is  
4 there are periods of time where the flow is much higher, and  
5 that's why I -- I think I stated in my first opening that -- I  
6 might be getting some help here as to where to look, but that I  
7 like to settle cases, and I like to compromise, but sometimes  
8 you can't compromise.

9           But one thing I thought we could compromise on,  
10 because I have permission to was that predevelopment flow at  
11 33,900. And that was based upon historic information, but --  
12 and it is supported by substantial evidence. It doesn't mean I  
13 actually think it's right, you know. It's like well, can I  
14 stipulate that my client has been injured? Yes. Can I  
15 stipulate that my client has been injured to at least a million  
16 dollars? Sure. Do I think it's 2 million? Yes. Will we  
17 settle for a million five? Okay. Right? It's that analogy to  
18 me.

19           And so I'm not -- I'm not finding it.

20           THE COURT: I took you way far off.

21           MR. DOTSON: No.

22           THE COURT: I really just -- I think you've answered  
23 my question on historic --

24           MR. DOTSON: I'm pleased to ask -- try to answer any  
25 question you have.

1           The point is that as you look in the record, and I  
2 don't know if you're going to do posthearing briefs at all. If  
3 you do, I can try to slip you the --

4           THE COURT: I hadn't thought of that.

5           MR. DOTSON: -- slip you the --

6           Do we have the number?

7           No. You would think I'd be able to find the stupid  
8 page. I'll find it as soon as I sit down, of course.

9           But the point is it's based upon historical  
10 information, and there are, I will concede, that there are  
11 years where, to my recollection, there were periods of time  
12 where they had no data, and then there were years, and most of  
13 it was older information where they had a number. They had an  
14 estimate. It's still going to be an estimate, and it's still  
15 going to have to be averaged over time.

16           And so that's where you rely upon the expertise of  
17 the State Engineer to make those sort of determinations.

18           Okay. Yeah. So if you turn to record on appeal  
19 41962, and if we had this ELMO, but let me just tell you. So  
20 there's a hydrograph there, and it shows the gage flow, and it  
21 shows the flood flow, and the first thing that is highlighted  
22 either by me or Tom O, whoever Tom O was, the mean annual flow  
23 measured at the --

24           MS. PETERSON: Your Honor, I am going to object to  
25 that because he's reading from evidence that has -- it sounds

1 like it has interlineations in it, and that's the documents  
2 we're not supposed to be looking and referring to.

3 THE COURT: So I --

4 MR. DOTSON: The text --

5 THE COURT: Correct me if I'm wrong.

6 MR. DOTSON: Yeah.

7 THE COURT: Is it that they were highlighted, and now  
8 they're just plain text that were put in on the amended, or are  
9 there actual notes on them?

10 MR. BOLOTIN: Your Honor, this is James Bolotin from  
11 the -- representing the State Engineer.

12 The document that has highlighting also has some red  
13 notes by someone with a last initial --

14 THE COURT: Tom O or whatever?

15 MR. BOLOTIN: Well, that's what shouldn't -- I kind  
16 of --

17 THE COURT: Should not be considered?

18 MR. DOTSON: I will not read the notes.

19 THE COURT: Okay. So --

20 MR. DOTSON: There's no notes on the screen.

21 THE COURT: Do you have an objection to the  
22 highlighted portion even though it's highlighted?

23 MS. PETERSON: I do have an objection to the  
24 highlighted portion. And it sounds like the record on appeal  
25 that was filed is blurry, and the amended record or -- I can't

1 remember what it's called, is blurry, and you can't see it.

2 MR. BOLOTIN: Yeah. So the amended record is what we  
3 were talking about earlier this morning that needs to be fixed  
4 again with the -- we probably need to withdraw the amended  
5 record and file a -- an errata or something to fix those pages  
6 in a way that everybody can read, but also doesn't have the  
7 highlights or the notes.

8 THE COURT: Well, the amended record is not in our  
9 Odyssey.

10 MR. BOLOTIN: It's -- I spoke with --

11 THE COURT: Well, I know you spoke with them, but  
12 when I pull it up, is not in there at all. So -- what I can  
13 see.

14 MR. BOLOTIN: And there was a --

15 MR. DOTSON: Can I respond to the objection?

16 THE COURT: Yes, you may respond to the objection.

17 MR. DOTSON: Your Honor, the page which we are  
18 referring has no interlineation. There are only  
19 interlineations that -- of a few pages of the entire text. And  
20 they are easily obvious because they are of a different nature  
21 than the text of the report.

22 THE COURT: Okay. So then if you just --

23 MR. DOTSON: Read --

24 THE COURT: -- the text of the report, which is  
25 something that would be in the amended --

1 MR. DOTSON: Right.

2 THE COURT: -- I think that would be proper.

3 Is there a response to that?

4 MS. PETERSON: There's not, but Mr. Dotson just said  
5 I'm not going to read the interlineations. So it sounded like  
6 he was reading -- I mean, now he just says it's not -- the  
7 interlineations --

8 MR. DOTSON: Well, there's no interlineations.

9 MS. PETERSON: -- are not on the report or on that  
10 page. So I don't know what he's talking about.

11 MR. DOTSON: No. I said I was reading the report.  
12 I'm sorry if it was misunderstood.

13 THE COURT: All right. So just the text of the --

14 MR. DOTSON: Just the text of the report.

15 MS. PETERSON: And I don't think it was  
16 misunderstood. I think it was misstated.

17 THE COURT: Okay.

18 MR. DOTSON: That's very possible. Oftentimes my --  
19 we are, in oral argument, not as perfect in our words and our  
20 speech as we should be.

21 THE COURT: So you were talking about the mean annual  
22 flow measures.

23 MR. DOTSON: Yeah. I'm going to make -- I'm going to  
24 just read some portions from 41962.

25 And so the mean annual flow measured at the Moapa

1 gage in 1946 was 46.8 CFS, cubic feet per second, 33,900  
2 acre-feet. I don't know what was in the State Engineer's mind,  
3 but I find it remarkable that that's the exact number he  
4 eventually arrived at.

5 The --

6 THE COURT: Did you say 36 or 46 --

7 MR. DOTSON: I'm sorry. 33,900 acre-feet.

8 THE COURT: Okay.

9 MR. DOTSON: 33,900 acre-feet.

10 THE COURT: And that was in 1948?

11 MR. DOTSON: That was 1946.

12 THE COURT: All right.

13 MR. DOTSON: The bottom of that paragraph, the  
14 average flood adjusted mean annual flow was 47 cubic feet per  
15 second, which is, in parentheses, 34,000 acre-feet. This says  
16 AFY, which I assume it means per year.

17 THE COURT: Per year.

18 MR. DOTSON: The next paragraph,

19 The 1946 predevelopment base flow also  
20 corresponds with information compiled by Eakin,  
21 a guy we've heard a lot about, parentheses,  
22 1964. Eakin, 1964, reported a 25-year average  
23 flood adjusted mean annual flow of 46.4 cubic or  
24 CFS, parentheses, 33,600 AFY, parentheses.  
25 Using intermittent -- this is why I said I could

1 tell there was gaps in the data -- data between  
2 1914 and 1962.

3 In addition, Eakin, 1964 estimated that  
4 approximately 2,000 to 3,000 AFY of spring flow  
5 was being consumed by phanerophytes (phonetic)  
6 between the spring orifices and the gage.

7 And these are a type of plant, by the way, Your  
8 Honor, that does well in the desert.

9 MS. PETERSON: Your Honor, I am going to object, and  
10 I'd like this noted for the record that SNWA, whose time has  
11 already passed to present their case, is now helping MVIC and  
12 providing him documents to support his oral argument, his  
13 rebuttal.

14 MR. DOTSON: I'll put it on the record. I'll use my  
15 time.

16 Counsel for SNWA just provided me a unhighlighted  
17 page to offer to the Court. So it is -- and allows me -- well,  
18 I assume that's why he gave it to me. It also allows me to  
19 confirm that the text is the same on the document that I'm  
20 looking at as on the document that will be in your amended  
21 record.

22 THE COURT: All right.

23 MR. DOTSON: So --

24 THE COURT: Your objection is noted for the record,  
25 and I will note that this was sort of in response to my

1 question, and I have totally taken him far off from your  
2 argument.

3 So I'll have you just get back to your argument.

4 MR. DOTSON: All right. I'm going to read the last  
5 sentence here, and then I will -- because I think I am really  
6 at the end of your -- of answering the question.

7 Because there's an Eakin and more report you'll see  
8 in the middle of that page. And just you can obviously just  
9 read the page, that has the 36,000 AFY, which I'm going to  
10 guess is what Mr. Ricci was relying upon.

11 All right. Back to what I was talking about.

12 So it's been long recognized -- it's recognized from  
13 the decree, that the Muddy River was fully appropriated.  
14 That's the whole importance of that second grant to MVIC.  
15 There's no more water to give. The water is fully  
16 appropriated, and any water not put to beneficial use for those  
17 above MVIC are to be put to beneficial use by MVIC.

18 And notably, the other parties in the litigation,  
19 which is why I described the page that has the stipulated  
20 portion of the order, concurred, apparently, since they signed  
21 the stipulation, with that sort of a process.

22 Our State's water rights statutes forbid the  
23 reallocating adjudicated water rights, and that's the case that  
24 counsel and I have also have both been citing to. And that  
25 would not be appropriate here. It's not appropriate to -- but

1 our objection to 1309 is not only is it because it's not  
2 appropriate to reopen and modify the decree, it's also not  
3 appropriate through an order by the State Engineer to  
4 circumvent the intent and holding of the decree. And that's  
5 what 1309 did, and that's why we object to it, and that's why  
6 we filed a petition for judicial review.

7 NRS 533.085, nothing contained in this chapter shall  
8 impair the vested right of any person to the use of water, nor  
9 shall the right of any person to take and use water be impaired  
10 or affected by any of the provisions of this chapter where  
11 appropriations have been initiated in accordance with the law  
12 prior to March 22, 1913.

13 I think that MVIC's are the only water rights that  
14 come before the nonimpairment statute. And so I cite to this.  
15 I cited to it in my opening. I'm citing to it now because it's  
16 not that we're relying just on one statute. It's not that  
17 we're just relying on the common law of prior appropriation.  
18 It's not just that we're relying upon sound public policy and  
19 public interest. It's not just that we're relying on common  
20 sense. It is all these things together that support and  
21 protect these decreed rights.

22 Okay. Now, we're moving to 12.

23 But you know what, even if it was just the decree and  
24 this -- frankly, just if it was the decree and the enabling  
25 act, that would be enough. But I don't have to stand just

1 there. It's the decree, the enabling act for the State  
2 Engineer, and it's this statute. You can stand just on those.  
3 You don't need all of the things I just listed.

4 533.0245, the State Engineer is prohibited from  
5 carrying out duties in conflict with the decrees or orders.  
6 That's what this did. The 8,000 acre-foot cap is inconsistent  
7 with well supported elements of 1309.

8 In other words, this is where I say you can't come to  
9 conclusions which are supported with lots of substantial  
10 evidence over years of measurement on amount of flow, say that  
11 that amount you're not even getting close to it any more and  
12 then develop a level of pumping that you're going to allow  
13 that -- where you think well, it might actually keep going down  
14 if we allow this, but that's what we're going to do. Those are  
15 inconsistent with logic.

16 It's a violation of 533.0245, and that's what --  
17 sometimes it's easier in the law just to rule on exactly what's  
18 in front of you, and then the pieces together make the bigger  
19 picture. I'm not saying you can't look at the big picture  
20 because you have to obviously, but even if I'm just looking at  
21 this narrow, simple thing, the ruling is clear. That part  
22 of -- well, we hope it's clear, that part of 1309 is improper,  
23 illegal and must be stricken and reversed with instructions to  
24 follow the decree, follow the order, follow the statute.

25 Again, with the 8,000 AFA, it's based only on the

1 fact that the Muddy River is nearing equilibrium. It doesn't  
2 speak to at all in the analysis what it takes to get the flows  
3 back to what they were. It simply is an acknowledgment that  
4 they aren't where they should be.

5 It's incorrect to contend that a separate legal  
6 action should be necessary. That would ignore this entire  
7 statute. It may be necessary. It may be appropriate, but it  
8 shouldn't have to be. You shouldn't have to have a decreed  
9 right, and it would defeat kind of the whole concept of public  
10 policy of having a State Engineer if every decreed right owner  
11 had to separately, we have two parallel systems where you had  
12 to separately move in and enjoin somebody before they drill  
13 their well because you think it's going to impair you.

14 You don't have to do that. That's not what the  
15 system is. That would ignore the statute and the purpose of  
16 having the State Engineer's office where you have a group of  
17 experts, and you have an administration of the waters of the  
18 State of Nevada by those experts which take into account these  
19 decreed rights, which are the supreme highest rights in that  
20 system.

21 Moving on to 13, which is the last. What are we  
22 asking for? I've got to look at Steve's notes. I've not got  
23 them all yet.

24 Okay. We're asking you to remand with instructions  
25 to strike the illegal portions of 1309, and the factually

1 unsupported conclusions while leaving the supported  
2 conclusions.

3           It was argued that you can't do that. Well, I think  
4 that's exactly what we do. We see appellate courts do this all  
5 the time where they say, well, this is right, but I'm going to  
6 remand this to you because you have to consider X, right, say  
7 it's a different context that I have dealt with before. You  
8 didn't provide enough support for your attorney fee motion,  
9 right. So it's remanded. The attorney's fees have been  
10 granted. They didn't change that part, but you've got to  
11 provide this additional support for your attorney fee motion.  
12 You have to provide the invoices, whatever.

13           I'm just drawing an analogy to something else that's  
14 much simpler. But maybe it's not actually simpler. Because  
15 what am I really asking you to do? I'm asking you to remand  
16 with instructions to follow the law, which that is the law, by  
17 the way. You're supposed to submit your attorney's fees with  
18 your affidavit and your confirmation of this and give the other  
19 side your, although redacted, attorney fee invoices, and that's  
20 what I'm asking you to do here.

21           I'm asking you to remand, tell the State Engineer to  
22 follow the law, acknowledge that certain things he did were  
23 right and seem to be supported by substantial evidence, but  
24 these other things, these other conclusions you had can't be  
25 supported by substantial evidence if -- because they're

1 inconsistent with the base conclusions. Specifically you can't  
2 conclude that 3,300 acre-feet a year is not flowing into the  
3 river, which is fully decreed and still say, but we're going to  
4 do -- allow pumping that we know won't change that. That's --  
5 you know, that's a circumvention of the decree.

6 And so it is entirely appropriate, in our view, that  
7 you remand with these specific instructions.

8 Thank you, Your Honor. And again I want to thank you  
9 very much for your time this week.

10 THE COURT: Okay. Thank you.

11 So right now it's 11:30. Would you all like to do an  
12 early lunch break or -- I mean, I know Nevada Cogeneration, so  
13 since you are up, I don't know how long you're looking at, if  
14 you --

15 MR. FLAHERTY: I would not be done by noon, Your  
16 Honor.

17 THE COURT: Okay. So should we take our lunch break  
18 now and then come back at 12:30? Would that work for everyone?

19 MR. FLAHERTY: Yes, Your Honor.

20 MR. BALDUCCI: Your Honor, I did have slides  
21 delivered. I don't -- I can deal with this after lunch or  
22 before.

23 THE COURT: I'll let the boss decide.

24 (Proceedings recessed at 11:29 a.m., until 12:33 p.m.)

25 THE COURT: Okay. I think everyone is here.

1 (Pause in the proceedings.)

2 THE COURT: Okay. The floor is yours.

3 **ARGUMENT FOR NEVADA COGENERATION ASSOCIATES NOS. 1 AND 2**

4 MR. FLAHERTY: Well, thank you. Good afternoon, Your  
5 Honor. Frank Flaherty here on behalf of Nevada Cogeneration  
6 Associates Numbers 1 and 2.

7 I would like to start with a little housekeeping of  
8 my own. I just want to let the Court and the parties know that  
9 I did provide a copy of the PowerPoint slides I presented  
10 Tuesday morning to the clerk. I e-mailed them to her, and I  
11 asked my assistant to e-mail them to all counsel.

12 And if anybody didn't get it, I would just request  
13 that they let me know, and I'll make arrangements.

14 THE COURT: Okay. Thank you.

15 MR. FLAHERTY: I did not compare notes with counsel  
16 for Dry Lake in preparing my presentation, and I probably  
17 should have because a lot of what I say is going to sound very  
18 similar. I thought about editing myself, but then I've got  
19 three hours and 13 minutes, and I didn't -- I didn't want to  
20 run the risk of editing myself out of an important point.

21 THE COURT: Sure.

22 MR. FLAHERTY: So bear with me if it gets redundant,  
23 please.

24 THE COURT: No problem.

25 MR. FLAHERTY: And the first redundancy, I will pare

1 it down. I think Dry Lake already spoke to the point raised by  
2 Muddy Valley Irrigation Company, MVIC, that the challenge to  
3 the formation of what I call the superbasin in Order 1309 is  
4 not timely. It should have been filed after Order 1303. 1303  
5 was an interim order. It was not appealable. You and I  
6 discussed this a bit Tuesday morning, Your Honor. And the only  
7 thing I think I'll add to that -- I'll add a couple of things.

8 One is I can give you a cite. It's to a -- it  
9 concerns a District Court decision and whether or not that was  
10 final. But it's *Lee versus GNLV*. That's 116 Nevada 424. And  
11 basically unless an order disposes of all the substantive  
12 issues and leaves nothing but miscellanea, like attorney's fees  
13 for a later time, it's not final. It's not appealable.

14 And then also echoing what Dry Lake said, if we  
15 imagined a situation were all eight of these petitions -- there  
16 were no intervenors, all eight of these petitions were against  
17 the State Engineer, and the only issue before the Court was,  
18 was there authority to form this superbasin, and we had I think  
19 20 plus briefs, hundreds of thousands of dollars in attorney  
20 fees, you blocked out two weeks in your calendars, and then  
21 Mr. Bolotin stood up here yesterday afternoon and told you you  
22 had to throw the whole thing up (indiscernible) it was  
23 untimely, I think if there was a stapler up there on the bench,  
24 Your Honor, you'd be tempted to throw it at him. So the idea  
25 that this can be raised now is nonsense.

1           The argument that the challenge to the superbasin  
2 formation is untimely is untimely in itself, okay. And since I  
3 just said the word superbasin, I want to kind of define the  
4 parameters when I use that term. I have to confess that I  
5 hadn't been thinking about joint administration as an issue  
6 until you brought it up the other day on the bench, Your Honor.

7           When I say superbasin, this is what my client's gripe  
8 is. We have several formerly separately administered  
9 groundwater basins now combined --

10           THE COURT: Into one.

11           MR. FLAHERTY: -- with a surface water source and by  
12 imposition of the 8,000 acre-foot cap or maybe less,  
13 conjunctive management.

14           So when I say superbasin, that's shorthand for all  
15 that, okay.

16           The first thing I want to do is I want to talk about  
17 some concessions the State Engineer made in oral argument. And  
18 some of them might be better characterized as confirmations  
19 rather than concessions.

20           And before I do that, as an initial matter, there's  
21 only one attorney here in this courtroom with authority to  
22 speak for the State Engineer. So if that attorney makes a  
23 concession deliberately or inadvertently, right -- it could  
24 have been a strategic decision in consultation with his client,  
25 that's binding essentially on us, right. And so an intervenor,

1 such as SNWA, doesn't have any right to get up here and try to  
2 walk back a concession made by the State Engineer. That makes  
3 no sense.

4 So what are these concessions and confirmations?

5 Well, first of all, historically groundwater has been managed  
6 on a basin by basin basis. We got that this week. Previously  
7 it had already been established by way of the State Engineer's  
8 testimony before the legislature in 2019 that historically  
9 groundwater and surface water had been administered separately.

10 The other thing we now know there's agreement on, at  
11 least with the State Engineer and the petitioners, is that  
12 NRS 533.024 mandates, it doesn't just encourage, it mandates  
13 that the State Engineer use the best available science.

14 There's also been a concession that there is no  
15 explicit authority in the statutes for the State Engineer to  
16 engage in conjunctive management.

17 The last -- the last concession or confirmation might  
18 be a better term for this one is that the six criteria  
19 announced in Order 1309 were developed after the parties  
20 presented their evidence. And I want to just dwell on that one  
21 briefly.

22 SNWA says, well, that's okay, and I'm paraphrasing  
23 here, because essentially this was really something more akin  
24 to a science symposium where everybody was just getting  
25 together, sharing their science and trying to understand how

1 this system worked.

2 Well, if that were really the case, then this ex post  
3 facto application of these six criteria, well, that may have  
4 been okay. I talked Tuesday morning about the statement from  
5 the hearing officer at the outset of the hearing that led to  
6 1309 where she said it wasn't an adversarial proceeding, and it  
7 wasn't a contested case. If that were really true, it might  
8 have been okay to have the science symposium and then develop  
9 these six criteria, but that's not true because -- and we know  
10 that's not true, Your Honor, because we had eight aggrieved  
11 parties here in front of you.

12 I want to turn now to some items that are specific to  
13 my client, NCA.

14 Now we know as a starting point in the law the State  
15 Engineer's decision is considered prima facie correct. That's  
16 our point of departure in this proceeding.

17 Now, NCA has argued specific deficiencies in terms of  
18 substantial evidence in the State Engineer's decision to  
19 include the area encompassing NCA's production wells in the  
20 superbasin. That put the onus on the State Engineer to  
21 essentially rebut that, to point you to citations in the  
22 record, the substantial evidence, the best available science in  
23 the record that justify, that support the inclusion of NCA's  
24 production wells. But he didn't do it. He had his chance, and  
25 he didn't do it.

1 First, let's talk about the multiple linear  
2 regression analysis, the MLR analysis that was conducted by  
3 SNWA. As you may recall, Your Honor, NCA relied upon that in  
4 the hearing before the State Engineer because it demonstrated  
5 there was no correlation or a low correlation between water  
6 levels in the superbasin and what was going on with NCA's  
7 production wells, okay.

8 In response to that, the State Engineer had said,  
9 well, multiple experts criticized SNWA's MLR analysis, and  
10 therefore I didn't rely on it.

11 In response, not just Tuesday morning, but in the  
12 briefing, NCA said, no, that's wrong. Only two experts  
13 criticized SNWA's MLR analysis, and that criticism was limited  
14 to the application of that analysis in California Wash and in  
15 Garnet Valley, not in the Black Mountains Area.

16 But when the State Engineer came up and delivered his  
17 response, all he did was just say again many experts criticized  
18 the MLR analysis. He did not provide you to a citation in the  
19 record on appeal.

20 Your Honor, I suppose you already understand this and  
21 I -- but it's not your job to comb through the 50,000 plus  
22 pages of this record on appeal and start looking for -- you  
23 know, counting experts who are criticizing an MLR analysis.  
24 That was the State Engineer's job. And that makes sense;  
25 right? He built the record on appeal. He should be the one

1 most familiar with it, and he's the one making the argument  
2 about these multiple experts.

3           So in terms of the record, in terms of what's been  
4 presented to you, the best available science in the record is  
5 that SNWA's MLR analysis, as applied in the Black Mountains  
6 Area with regard to NCA's production wells shows no correlation  
7 or a low correlation and therefore justifies exclusion, not  
8 inclusion of NCA's production wells in the superbasin.

9           NCA also stated in its reply brief that there was no  
10 substantial evidence comprised of the best available science in  
11 the record to support the Muddy Mountain thrust fault as the  
12 basin boundary. Again, the State Engineer got up here and said  
13 there's substantial evidence supporting the Muddy Mountain  
14 thrust fault as the best boundary. But again, no citation to  
15 the record, nothing, nada, zip, zilch.

16           So these failures alone on the part of the State  
17 Engineer in this proceeding mean there was no substantial  
18 evidence for inclusion of NCA's production wells in the  
19 superbasin. That in itself, if you get past authority, which  
20 we're going to talk about as others have talked about, that in  
21 itself would entitle NCA to a remand on that question, a remand  
22 on what is the appropriate southeastern boundary of the  
23 superbasin, and does that boundary include or exclude NCA's  
24 production wells.

25           Now, the reason I have this up here is perhaps the

1 State Engineer thought that presenting this to you would be  
2 substantial evidence for inclusion of NCA's production wells,  
3 but there's a problem with that, Your Honor.

4           If you look at it, the very bottom of the map, and  
5 this is folded in half -- I'll state for the record this is the  
6 State Engineer's exhibit. It is derived from record on appeal  
7 Number 69 from pages 41982 through 41984. It's essentially a  
8 map of the superbasin, and there's several hydrographs, I  
9 believe is a term, superimposed on the map. And the hydrograph  
10 and the part of the exhibit we're interested in is the very  
11 bottom, BMDL-2, okay. That is a well, right, and the BM is for  
12 Black Mountains, and the DL is for Dry Lake, another party to  
13 this proceeding.

14           Now, the problem with that is that is not NCA's well  
15 okay. So that's one problem.

16           But the bigger problem is that well is to the west of  
17 the strike-slip fault that we talked about on Tuesday morning,  
18 Your Honor. You may recall that I presented you with a couple  
19 of slides. I presented you with Slides 17 and 20 for my  
20 presentation, and I think maybe this is a good point here.  
21 I'll go ahead and switch out. So just kind of you can see  
22 there it's BMDL-2.

23           I'm going to put a different exhibit in here. This  
24 was Slide 17, and it's from the record on appeal Number 973 at  
25 52605. And you may recall, just kind of bringing you back,

1 Your Honor, to Tuesday morning, we identified the Dry Lake  
2 regional thrust fault as this dotted black line trending  
3 southwest to northeast. And then to the right of that or to  
4 the east and south of that is the strike-slip fault. This is  
5 the one discussed at length during the hearing by NCA's expert,  
6 and we established that that arrow is not pointing to the  
7 horizontal red line. It is pointing to a dotted blue line  
8 trending northeast -- excuse me, southwest to northeast.

9 And then finally, further to the right, further to  
10 the southeast is the Muddy Mountain thrust fault, yet another  
11 dotted black line trending southwest to northeast.

12 All right. And so the significance of this is you  
13 can see the strike-slip fault, the dotted blue line. Sitting  
14 right on top of the dotted blue line is BMDL-1, okay. That's  
15 not the one we saw just a second ago on the exhibit I had up  
16 there, okay. That one is BMDL-2, all right. That is the one  
17 the State Engineer showed on that demonstrative exhibit for  
18 inclusion of the Black Mountains Area in the hydrographic  
19 basin.

20 And I'm happy to switch the slides back if you want.

21 THE COURT: No. I actually have this right here, and  
22 I'm looking --

23 MR. FLAHERTY: Perfect.

24 THE COURT: Yeah. So, yeah.

25 MR. FLAHERTY: And so here's the problem, right.

1 BMDL-2, well, sure, it justifies, you know, this is  
2 consistency, this correlation between the water levels and that  
3 well in the superbasin. It does, in fact, justify inclusion of  
4 a portion of the Black Mountains Area in the superbasin, but  
5 not the portion that includes NCA's production wells. Because  
6 right below that green dot, BMDL-1, you see the blue and the  
7 red squares. Those are NCA's production wells and monitoring  
8 wells, and they are sitting on the fault, in the fault.

9 THE COURT: Just so I'm clear, the point is that the  
10 BMDL-2 is actually within the strike-slip fault whereas BMDL-1  
11 and also the production wells sit on top of the fault?

12 MR. FLAHERTY: I can't confirm that. The point is --

13 THE COURT: Or close to it.

14 MR. FLAHERTY: The point is the BMDL-2 is to the west  
15 of the strike-slip fault?

16 THE COURT: Okay. West. Okay.

17 MR. FLAHERTY: -- which could be a boundary, right.

18 And NCA's production wells and monitoring wells are  
19 in the fault itself. I don't know where BMDL-1 is. I don't  
20 know if it's in the fault or if it's in the superbasin. I  
21 don't know.

22 THE COURT: Well, I guess you can't really tell. I  
23 mean, it looks very, very close to the fault.

24 MR. FLAHERTY: It does.

25 THE COURT: Maybe -- maybe it is a little bit to the

1 west of that. Okay.

2 MR. FLAHERTY: But apparently BMDL isn't cited on  
3 that State Engineer exhibit. Apparently they relied on BMDL-2  
4 and the hydrograph for that.

5 And then I just have another slide here, Your Honor,  
6 that makes it just a little bit -- this is Slide 20. And this  
7 is from the record on appeal.

8 Oops. So everybody can see it I'll move it a bit.

9 Record on Appeal Number 990 at 52909, okay. And as I  
10 recall -- as you may recall this was from a larger exhibit, and  
11 there was a little square that was blown up, and this is the  
12 blown up square.

13 And this just shows it to you again, Your Honor. The  
14 little red glob on the dotted blue line is NCA's production  
15 wells. And on this exhibit it shows BMDL-1 and -2 wells off to  
16 the -- off to the left and off to the west, okay.

17 And this has -- the dotted purple line is the  
18 proposed administrative adjustment to the boundary off the  
19 fault just to reflect the fact that NCA's wells are in the  
20 fault.

21 So the point of all that, Your Honor, was that that  
22 blown up exhibit with BMDL-2 in the Black Mountains Area, that  
23 is not substantial evidence comprised of the best available  
24 science in the record that would justify inclusion of NCA's  
25 production wells in the superbasin.

1           Now, and the significance of this will bring us back  
2 to Order 1309 itself, and I'm not going to try to put the  
3 slides up again, Your Honor -- or actually I guess I can use  
4 the ELMO. And just this is just a quote, a block quote from  
5 Order 1309, and you can see there --

6           THE COURT: The other way.

7           MR. FLAHERTY: Let me turn it the other way, please.

8           You can see there I highlighted Criteria Number 5,  
9 okay. And Criteria Number 5 is geologic structures that have  
10 caused a juxtaposition of the carbonate rock aquifer with low  
11 permeability bedrock are consistent with a boundary. So a  
12 geologic structure would be a fault, okay. So a fault is  
13 consistent with a boundary. It doesn't say it is a boundary,  
14 but it says it's consistent with a boundary.

15           And then Number 6, I'm going to try to paraphrase  
16 this one a little bit. It says, when there's uncertainty,  
17 right, there's information indicating a close hydraulic  
18 connection, but there's uncertainty, limited, poor quality or  
19 low resolution water data to determine the extent of the  
20 connection. It says a boundary should be established such that  
21 it extends out to the nearest map feature.

22           Well, if we extend out from the superbasin to the  
23 nearest map feature, the suggestion for the hydraulic  
24 connection is BMDL-2, as shown in the State Engineer's exhibit.

25           When we extend out, we don't go all the way out to

1 the Muddy Mountain thrust, as the State Engineer did. We go  
2 out to the strike-slip fault identified by NCA -- by NCA's  
3 expert, right. We talked about the slides, the pictures, the  
4 data. That was arbitrary and capricious.

5 And we already complained and made our case that  
6 developing the criteria after the fact was arbitrary and  
7 capricious and a violation of administrative due process, but  
8 we went a step further here in that he did not even apply the  
9 ex post facto criteria in the manner he said he would, yet  
10 another violation of the administrative due process.

11 I want to switch gears now and talk a bit about the  
12 Humboldt River and Assembly Bill 51. And don't worry I'm not  
13 going to get into -- I'm not going to tell you all about the  
14 Humboldt River. I really want to talk more about the failure  
15 of AB51.

16 It was interesting SNWA relied on a United States  
17 Supreme Court case for the proposition that you shouldn't read  
18 too much into the legislature's failure to enact a bill. But,  
19 of course, in the context we're in here, the United States  
20 Supreme Court, that's just persuasive authority. That's just a  
21 bunch of -- another bunch of judges, right, who have an  
22 opinion, right.

23 I found a Nevada Supreme Court case. I'm going to  
24 have trouble pronouncing the name here. It's Salaiscooper --  
25 S-a-l-a-i-a-s, Cooper -- versus the Eighth Judicial District

1 Court. 117 Nevada 892, and I'll say right now, Your Honor,  
2 it's not right on point, but I'll tell you about it, and it's  
3 more persuasive because it's our Supreme Court opining on the  
4 significance or not of failed legislation here in Nevada.

5 In that case, the appellant contended that the  
6 legislature's failure to pass a particular bill reflected the  
7 legislature's intent, okay. The Supreme Court said, no, it  
8 didn't, okay. So these Supreme Court disagreed with the  
9 appellant. But it said no. The reason the Supreme Court said  
10 no is because the legislature had not considered the bill. In  
11 other words, a bill was put in in front of the legislature, but  
12 then the sponsor of the bill pulled it, and the legislature  
13 never got a chance to consider it.

14 Well, that's not the case here. The Nevada  
15 Legislature did consider the bill in a lengthy committee  
16 hearing, and that's a committee where the bill died.

17 Now, I'm paraphrasing here. I'm not a stenographer.  
18 SNWA referred to that -- to AB51 or that hearing as a mess or a  
19 fiasco, and I just want to put a pin in that because I'm going  
20 to come back to it, okay.

21 So the *Salaiscooper* case stands for the proposition  
22 that legislative intent can be inferred from the legislature's  
23 failure to pass a bill after considering it, which it did in  
24 this case. The inference here as argued by NCA is that the  
25 legislature is not ready for conjunctive management. And I

1 think I made some arguments like that on Tuesday morning as  
2 well.

3 I want to talk now about the comment that the  
4 petitioners --

5 THE COURT: We'll let me -- so let me just ask you a  
6 question because, you know, you're talking about AB51.

7 MR. FLAHERTY: I am.

8 THE COURT: So, you know, as many bills are, many  
9 bills have different components to the bill, and that bill may  
10 fail for any number of reasons based on smaller components of  
11 the bill. How would a Court be able to look at a bill with all  
12 these other different kinds of components to it that may have  
13 ended up killing the bill to make a decision whether or not the  
14 legislative intent had to do with this portion or that portion  
15 or another portion? Do you see what I'm saying?

16 MR. FLAHERTY: I do. I understand, and I'm going to  
17 answer your question, but I'm going to start by encouraging  
18 you -- I know you have a lot of reading to do, but I would  
19 encourage you to take a look at the bill because it's only six  
20 pages.

21 THE COURT: Which is small.

22 MR. FLAHERTY: Right. And better yet, it's --

23 THE COURT: But how long is the testimony?

24 MR. FLAHERTY: Well, there's only about a page.  
25 There's only about a page of new text in the bill, and I'm

1 going to get back to that.

2           The testimony is basically a parade, and it's been a  
3 while since I read the legislative history myself, but I think  
4 there may have been already presentations, but it was a parade  
5 of people coming in in opposition, people with interest in the  
6 Humboldt River, Humboldt River Basin. And, you know, we can  
7 only speculate, right. And I would submit that's why the bill  
8 failed.

9           But to me that's a signal, especially after the State  
10 Engineer says, the (indiscernible) said to the legislature,  
11 hey, what you did in 2017 was helpful, right. That was the  
12 policy statement about conjunctive management. But he says I  
13 don't have the tools. I don't have what I need to move  
14 forward. He made it very clear. But then apparently these  
15 folks all came in, and the legislature said, well, whether you  
16 have the tools or not, we're not doing it.

17           THE COURT: Well, but that isn't fair to the Nevada  
18 State Engineer for me to speculate about what the legislative  
19 intent wasn't?

20           MR. FLAHERTY: What the legislative intent wasn't?

21           THE COURT: Right. Because you're saying that  
22 because -- well, I guess I should say because your argument is  
23 that this case stands for the idea that failure shows the  
24 legislative intent. And you said we can only speculate really  
25 as to why it sort of failed. So is that really a sound basis

1 for me to look at to see the legislative intent in not passing  
2 that bill?

3 MR. FLAHERTY: I think maybe we take one step to the  
4 left or the right here.

5 THE COURT: Okay.

6 MR. FLAHERTY: And instead of looking at it strictly  
7 in terms of legislative intent, we look at it in context  
8 because, I mean, the real reason I wanted to tell you about  
9 AB51, and I did, is because of what the legis -- excuse me,  
10 because of what the State Engineer said.

11 THE COURT: What his testimony was.

12 MR. FLAHERTY: He said he didn't have it, right. And  
13 we didn't get to 1329 on Tuesday. I'm not going to transgress  
14 your -- you partially sustained an objection from the State  
15 Engineer. I'm going to bring this up to the edge of that  
16 objection in a little bit and then stop, but --

17 THE COURT: So and let me just be clear. So the AB51  
18 really had to do with conjunctive management; correct?

19 MR. FLAHERTY: Right.

20 THE COURT: Okay. But so then do you disagree that  
21 in the legislative declaration that that implicitly gives him  
22 the powers to conjunctively manage and that there's previous  
23 case law that shows that he can -- that he has to consider  
24 conjunctive management?

25 MR. FLAHERTY: No, I wouldn't concede that, Your

1 Honor.

2 THE COURT: Okay.

3 MR. FLAHERTY: I would not. Because of -- not just  
4 because of the failure of AB51, but because of what the State  
5 Engineer said himself.

6 THE COURT: Okay.

7 MR. FLAHERTY: And some of the other practical  
8 realities we've been discussing in this case, and we're going  
9 to talk about that more today, the separation of powers and  
10 things like that. So I think I started that point on relating  
11 back to a blinders comment that the parties here are asking you  
12 to put blinders on and ignore the science.

13 To the contrary, I think the State Engineer and  
14 intervenors on his behalf are asking you to put blinders on  
15 with regard to the reality of AB51 and what was going on up in  
16 the Humboldt River basin in connection with AB51.

17 And I already encouraged you to take a look at AB51.  
18 I told you it's just about a page of text. And here's the  
19 important thing. When you look at that page of new text, it  
20 says nothing about the Humboldt River. It's plainly not  
21 limited to the Humboldt River, which is one of the things that  
22 was represented to you, Your Honor. They said, oh, this has  
23 nothing to do with the Humboldt River. That was a unique case.  
24 That has nothing to do with what's going on here in the Muddy  
25 River basin, but that's not what you're going to see if you

1 look at the text of AB51. It would've applied in the Humboldt  
2 River and related basins, the Muddy River and related basins.  
3 It would've given the State Engineer the tools he said he  
4 needed to go forward with 1309, but he didn't get them.

5 So that brings us up to Order 1309 -- excuse me 1329,  
6 and the objection you sustained in part from the State  
7 Engineer.

8 And you said you were -- you mentioned the *Mack* case,  
9 right.

10 THE COURT: The judicial notice.

11 MR. FLAHERTY: Yeah. So I went ahead, and I took a  
12 look at the *Mack* case that evening I believe. The citation for  
13 that is 125 Nevada 80. And I looked at -- I focused really on  
14 pages 91 to 92.

15 And just so there's no surprises, I'll state that the  
16 case was abrogated, but it was abrogated on other grounds. So  
17 it's still good law for the proposition we're debating here.  
18 And indeed, the general rule, as stated in that case, is  
19 Court's don't take notice of the record in a different case  
20 even if that different case is connected. That is, in fact,  
21 the general rule; however, the Court said, like any good  
22 judicial rule, it's flexible in its application.

23 THE COURT: Right. I mean, if it's closely  
24 connected.

25 MR. FLAHERTY: And we're going to parse words; right?

1 THE COURT: Yeah. But then who defines closely  
2 related; right?

3 MR. FLAHERTY: Right. So the Court said under some  
4 circumstances it will take judicial notice of records in  
5 another case, and the Court said, well, to determine whether or  
6 not there's an exception to the general rule, you have to  
7 examine the closeness of the relationship between the two  
8 cases.

9 THE COURT: Right.

10 MR. FLAHERTY: In the *Mack* case, it was Darren Mack's  
11 murder conviction. I guess that's case A.

12 So you're familiar with the facts.

13 THE COURT: Oh, I'm familiar with the facts, yes.

14 MR. FLAHERTY: Okay. So --

15 THE COURT: We get a lot of preaching about judicial  
16 safety based on that case.

17 MR. FLAHERTY: Oh, that's right. I forgot about that  
18 part of the case.

19 So back to the objection into 1329. Now Slide 2 from  
20 my presentation on Tuesday was already in the record. I've  
21 already put in the record, and I read it to you, and then the  
22 objection came up and was partially sustained. And so I'm not  
23 going to run afoul of your objection -- of your ruling just by  
24 repeating the only thing we talked about in Slide 2, which was  
25 just the title of Order 1329.

1 And the title of Order 1329 is --

2 MR. BOLOTIN: Your Honor, objection. The title is  
3 part of the exact -- this is James Bolotin for the State  
4 Engineer.

5 The title is part of the same document, and this *Mack*  
6 *V Mack* situation is -- I think your ruling, Your Honor, might  
7 be law of the case at this point. It's been ruled on on  
8 multiple judicial notice requests up to this point. And a key  
9 part of your rulings in those decisions was that you couldn't  
10 put stuff in that came after Order 1309. Order 1329 came after  
11 1309.

12 THE COURT: That is correct.

13 So here are the issues with me even considering 1329.  
14 Mr. Bolotin is right. It came after the record on appeal in  
15 this case.

16 Two, I don't find that they are closely enough  
17 connected under *Mack v. Mack*, and I will tell you why. Under  
18 *Mack v. Mack*, I think that case actually had to even do with  
19 two cases that were within the same jurisdiction. And they  
20 were very closely connected. They actually had to do with the  
21 same person. So I think one had to do with a civil case and  
22 one had to do -- or I mean the family case, and one had to do  
23 with the criminal case.

24 In this case you're talking about a case that's out  
25 in Humboldt County, which is a completely different

1 jurisdiction than our -- or not jurisdiction, different  
2 District Court, and it -- while it may involve the same type of  
3 legal argument, I don't find that the facts are so closely  
4 connected that I can take judicial notice of it.

5 MR. FLAHERTY: Well, Your Honor, I just -- I don't  
6 want to -- I certainly don't want to debate with you, but, I  
7 mean, the facts are physics, science, and if the state of the  
8 law can be a fact, that's a fact as well. I mean, there --  
9 things don't change. It's --

10 THE COURT: I mean, I can't even take judicial notice  
11 of, you know, cases that are in my own Odyssey system. You  
12 know, in order to make decisions, and I think, you know, even  
13 if it's like a, for example, you know, I've got a -- if I have  
14 a civil commitment case and I'm looking at the family court  
15 case, I don't necessarily -- I don't necessarily have the  
16 ability to take judicial notice of -- or actually I'll give you  
17 a better example.

18 I had a criminal case, a criminal case where the  
19 charges were child abuse and endangerment. There was a family  
20 case for termination of parental rights. I was not allowed to  
21 consider the termination of parental rights case in the child  
22 abuse and endangerment case, and it became relevant because --  
23 and I could not look myself independently in that case to see  
24 what was happening regarding the trial in the termination of  
25 parental rights case, not to find the facts of that case, but

1 just to know when it was happening because I was planning on  
2 having the defendants in my court get remanded.

3 So the instruction was that I was given from my chief  
4 because of the *Mack v Mack* case is that it is only if the  
5 criminal defense attorneys actually bring it up to me as their  
6 information to me. So I can't independently look even though  
7 it's involving the same two people and that -- so that is the  
8 kind of close connection that even under those circumstances I  
9 think I have to be very, very careful about.

10 And I think if you're talking about physics and  
11 science, I just don't find that that's quite close enough for  
12 me to be able to take judicial notice of that.

13 MR. FLAHERTY: Let me try it a little bit  
14 differently.

15 THE COURT: Okay.

16 MR. FLAHERTY: I promise you I won't spend all  
17 afternoon on this.

18 THE COURT: No problem.

19 MR. FLAHERTY: Well, first of all, 1329 is not a --  
20 it's not a District Court case, right. It's --

21 THE COURT: It's an order I guess.

22 MR. FLAHERTY: It's an order, right.

23 THE COURT: Which makes it even less so.

24 MR. FLAHERTY: Well, it's an order from an  
25 administrative agency. It's an order from an administrative

1 agency that is a party to this proceeding, okay.

2 THE COURT: And it still came after the record on  
3 appeal in this case. So I don't think it's really something  
4 that I can --

5 MR. FLAHERTY: All right. And just I will -- I won't  
6 run afoul of the objection. I just want to kind of preserve my  
7 point on the record.

8 THE COURT: Absolutely.

9 MR. FLAHERTY: If you were so inclined to revisit  
10 this later and change your mind, Your Honor, I would simply ask  
11 that you look at pages 6 through 7 of Order 1329, specifically  
12 the whereas paragraph that starts at the bottom of page 7 and  
13 carries over to the top of page 8 and consider what's stated  
14 there in the context of the issues before this Court and the  
15 State Engineer's testimony before the legislature in 2009  
16 regarding AB51.

17 And with that, I am happy myself to move off of 1329.

18 THE COURT: Okay. Thank you.

19 MR. FLAHERTY: I want to turn now to the State  
20 Engineer's authority. And I'm paraphrasing you now, Your  
21 Honor, but I believe you said from the bench perhaps more than  
22 once on this question of authority, I need you to spell it out;  
23 I believe is what you said, okay. But the State Engineer and  
24 their intervenors, and what you were asking to spell out was  
25 the authority to do the superbasin with conjunctive management,

1 but they failed.

2 Now, they're pushing really hard on the argument that  
3 the superbasin as a basin and the boundaries thereof is a fact  
4 issue. It's a science issue, right. Maybe. Okay, let's say  
5 we're going to give them that. If we give them that, that  
6 doesn't change or resolve the legal issue which is, does the  
7 State Engineer have authority to form this superbasin and  
8 engage in conjunctive management. That's a question of law,  
9 and you get your shot at that *de novo*, Your Honor.

10 And we've talked about a lot with statutes cited by  
11 the State Engineer and intervenors. We heard about  
12 533.024(1)(e), which the State Engineer has now informed us is  
13 just a lens that the legislature wants the State Engineer to  
14 look through. Well, whatever that means, a lens, that doesn't  
15 equate to authority to engage in conjunctive management.

16 We heard about the Muddy River Decree. We heard  
17 about 533.0245. That statute says it prohibits the State  
18 Engineer from impairing the Muddy River Decree, which makes a  
19 lot of sense because he's just an administrative agency, and  
20 that's a decree from the judicial branch. So he's prohibited  
21 from impairing that. But you cannot equate a prohibition on  
22 the one hand with authority on the other. The fact that you  
23 can't do this, the fact that you can't do A doesn't give you  
24 authority to do B. That's a non sequitur.

25 And the same can be said with regard to the

1 Endangered Species Act. The State Engineer -- I think we've  
2 heard testimony from CBD that, you know, prohibited from  
3 engaging in a take, right. They cannot do a take. Again  
4 though, the fact that you can't do a take doesn't equate to  
5 authority for conjunctive management.

6 And on that point, the State Engineer derives power  
7 from an express grant from the Nevada Legislature. He derives  
8 zero authority from the United States Department of Fish and  
9 Wildlife. He derives no authority from the United States  
10 Congress.

11 Now, don't get me wrong. With regard to the  
12 Endangered Species Act, we understand that the State Engineer  
13 has real and valid concerns regarding the Moapa dace, regarding  
14 what might happen if the federal government decides to get  
15 active. But concerns or fear, that's not a source of  
16 authority. The State Engineer doesn't derive authority from  
17 fear. No administrative agency does. He needs to express the  
18 concerns to the legislature, right.

19 Now, this brings me back to something I put a pin in  
20 earlier, the comment that AB51 -- it was a fiasco, okay. And I  
21 want to be careful with what I say here. I'm going to say  
22 something. I'm going to quickly kind of qualify it and put it  
23 in context: That's disrespectful to the legislature. Now,  
24 context. That's not a potshot at SNWA, you know. When I say  
25 disrespectful, I'm speaking in terms of the separation of

1 powers, okay.

2 We've got three coordinate branches of government,  
3 okay. The State Engineer is not a branch of government.  
4 Unless he's a twig. I don't know. There's three branches of  
5 government, right. And so it's not for the State Engineer to  
6 second-guess the legislature, okay. The State Engineer doesn't  
7 get to second-guess the legislature. The Governor can. The  
8 Governor has a veto. Court's don't really second-guess the  
9 legislature, but sometimes Court's intervene because the  
10 legislature perhaps has done something unconstitutional, but  
11 the State Engineer doesn't get to do that. It's not for this  
12 Court or the State Engineer to usurp the legislative function.

13 You know, at the outset of this hearing, Your  
14 Honor -- I want to hit a couple of points here.

15 I said that the State Engineer had created a  
16 situation where the irresistible force was colliding with the  
17 immovable object. Senior groundwater rights. Senior surface  
18 water rights or vice versa, right.

19 I want to use a different kind of visual now. I want  
20 to talk about that old expression the square peg in the round  
21 hole, okay. The round hole is the Muddy River Decree, right.  
22 It came around in 1920, right, 1920. There was water coming  
23 out of the ground and making a river. Nobody didn't spend a  
24 lot of time figuring out, hey, where the heck does that water  
25 come from? They were, like, wow, water. Let's get it, right.

1 Let's get it, you know, and we wound up with the Muddy River  
2 Decree. That's the round hole.

3 The square peg is reality. It's where we are today,  
4 Your Honor. We've got multiple groundwater users. You heard  
5 testimony about technology, population growth. You know, now  
6 we're getting water from the ground in the areas surrounding  
7 the Muddy River. And for purposes of this case, we're talking  
8 about 1100 square mile area. So things have changed, okay.

9 We've also heard a lot of talk about you're the  
10 decree court. You're the decree court. Now, although they're  
11 telling you you're the decree court, you're the decree court,  
12 and even though this decree originally came from this Court  
13 apparently, they're also telling you that you have no authority  
14 to change it either, right. The State Engineer can't change  
15 it. You can't change it. I guess the implication here might  
16 be nobody can change the Muddy River Decree. And maybe there's  
17 some heads nodding behind me, like, oh, yeah, right. Yeah.  
18 Right.

19 Okay. So let's proceed. Let's proceed on this  
20 basis. We heard this morning about a tentative settlement  
21 agreement among MVIC, SNWA and the State Engineer. And  
22 apparently under this tentative settlement agreement, you, as  
23 the decree court, are going to appoint a watermaster or a  
24 special master, and that special master is going to be the  
25 State Engineer who of course has already reached an arrangement

1 of sorts, tentatively reached an arrangement of sorts with MVIC  
2 and SNWA.

3 Now, Your Honor, I don't know if you use special  
4 masters a lot. I don't. I don't have a lot of familiarity  
5 with them.

6 THE COURT: So, I mean, the Eighth Judicial District  
7 Court does use special masters for specifically, you know,  
8 large cases, complicated discovery issues, things like that.

9 MR. FLAHERTY: Right. So my understanding then is a  
10 special master is essentially your proxy; right?

11 THE COURT: Correct. So usually they do -- they  
12 would make some sort of reports and recommendations that I  
13 would approve. So it's kind of like a hearing master. So we  
14 have lots of hearing masters, and I was a hearing master. So  
15 we do either a report or recommendation -- well, mostly it's a  
16 report and recommendation that is then approved by the Court,  
17 the District Court that oversees that special master.

18 MR. FLAHERTY: And I'll just speculate, Your Honor,  
19 that you were a hearing master because the Judge who appointed  
20 you thought you were reliable, a smart person, someone that can  
21 be counted on.

22 And so now if this settlement goes through, and, of  
23 course, this settlement presupposes that you haven't completely  
24 invalidated Order 1309 for lack of authority. But suppose this  
25 settlement goes through. So by appointing the State Engineer

1 as your special master, you're saying, okay, I'm comfortable  
2 with the State Engineer being my proxy. I have faith. I don't  
3 think he's in any way compromised and impartial of objectivity  
4 in this situation.

5 So let this -- so stop right there for a second, and  
6 now let's go back to 1920. Right. None of these -- well, I'm  
7 not going to say none of the petitioners because we have these  
8 intervenors and quasi-petitioners here, but so NCAA, of course,  
9 was not a party in 1920 in the Muddy River Decree, right.

10 So going back to this round hole, I guess the best  
11 analogy I can come up with is that the groundwater users in  
12 this new superbasin are essentially the equivalent of people  
13 who are, quote, unquote, stealing water, right. They don't  
14 have a decreed right, but they're intercepting this water.  
15 They're taking this water. And so it's like they're stealing  
16 water.

17 And, in fact, you saw a slide the other afternoon  
18 from SNWA I believe. They filed a notice of alleged violation  
19 with the State Engineer. And they said every groundwater user  
20 in the superbasin is stealing our water. Okay.

21 So now we're all going to go to the special master.  
22 All right. I know what I'm going to say when I get accused, my  
23 client is going to say when I get accused of stealing  
24 groundwater. I'm going to say, Judge, Your Honor, what are you  
25 talking about? You told me I could have that water. Well, how

1 is that going to work, Your Honor? They're trying to jam a  
2 square peg into a round hole, and it's not going to work.

3 But it works for them, of course, and I don't fault  
4 them. Water is a scarce precious commodity. They want every  
5 molecule they can lay their hands on, okay. But it's not their  
6 water. I understand it's not my client's water either. It's  
7 just not their water, and they keep on talking about the Muddy  
8 River Decree and how it can't be fixed -- excuse me, can't be  
9 changed. You can't change it. The State Engineer can change  
10 it.

11 Well, you know why they don't want to go back to the  
12 legislature, Your Honor, because the legislature can change the  
13 Muddy River Decree. The water belongs to the public. As  
14 counsel for Dry Lake reminded you, it belongs to the public,  
15 and the legislature represents the public, okay.

16 So this is an attempt to evade an inconvenient  
17 meeting with the legislature. I think inconvenient is an  
18 understatement.

19 So I've digressed a little bit, Your Honor, and just  
20 on that point, just the idea that my client is having to  
21 explain itself to a hearing master about why it's using water  
22 when the hearing master is the person, entity that said you  
23 could use the water, we're entering the theater of the absurd  
24 at that point.

25 But I want to continue with the discussion of

1 authority.

2           You heard about 534.110, sub 6. That's the authority  
3 you investigate. That doesn't equate to the authority to  
4 engage in conjunctive management.

5           534.110, sub 2, sub b, authority to engage in pump  
6 testing does not equate to the authority to engage in  
7 conjunctive management.

8           I believe Dry Lake covered 533.430, sub 1, and  
9 534.020, sub 1, the 533 statute being surface water and 534  
10 being groundwater. But those basically stand for the  
11 proposition that you got to protect existing rights. Well,  
12 Order 1309 does not protect existing groundwater rights. It  
13 guts them.

14           533.120 and 534.120, that was rule-making. But as  
15 you, yourself, observed, Your Honor, it's only rule making in  
16 furtherance of express powers conferred by law, by the  
17 legislature. We don't have that here.

18           534.030, that's an administration of a designated  
19 basin. That's no help because this is not about the State  
20 Engineer designating a basin. It's about creating a superbasin  
21 for purposes of conjunctive management.

22           We even heard a citation from the Water Words  
23 Dictionary. That's the State Engineer's own document. He  
24 can't rely on himself for authority in this context, Your  
25 Honor.

1           The arguments from the State Engineer and the  
2 intervenors in terms of statutory authority is the statutory  
3 equivalent, I guess, of throwing a bowl of spaghetti against  
4 the wall and hoping something would stick, right. The noodles  
5 are the different statutes, okay.

6           But it's just a big mess.

7           Now that's the way I've described it.

8           SNWA described it in much loftier terms, as a mosaic  
9 of power. Cue music, please.

10          Okay. Well, I -- you know, at least a mosaic I guess  
11 is typically made of tiles. That might be something solid, but  
12 that's not the case here.

13          Really what we're talking about is a house of cards,  
14 okay. It's a flimsy legal argument constructed on the gossamer  
15 threads of wishful thinking. Order 1309 is invalid. It's an  
16 invalid exercise of conjunctive management that the State  
17 Engineer does not have the authority to do. He couldn't get it  
18 from the legislature. He still doesn't have it.

19          Your Honor, I'm happy to be redundant now, and thank  
20 you for your patience, your diligence and your careful  
21 attention and consideration.

22          THE COURT: Okay. All right.

23          So next we've got Georgia-Pacific.

24          Mr. Foletta.

25          MR. FOLETTA: Yes. Thank you.

1           **ARGUMENT FOR GEORGIA-PACIFIC AND REPUBLIC ENVIRONMENTAL**

2           MR. FOLETTA: Thank you, Your Honor. Lucas Foletta  
3 for Georgia-Pacific and Republic.

4           I think the case has been pretty well argued at this  
5 point on both sides. That said, I do want to make a few points  
6 in a few different areas just to mainly respond to some things  
7 we've heard from the State Engineer and parties supporting the  
8 decision on the last phase of the case.

9           The first area I want to talk about, really, is the  
10 standard of review. There's been a lot of discussion about it.  
11 What I want to talk about is really what seems to be the State  
12 Engineer's principal defense of his evidentiary findings. What  
13 you see in his brief and what you hear in the argument a lot is  
14 that obviously he's entitled to peak deference. These are  
15 highly technical decisions. He proposes that there's sort of  
16 this spectrum of deference on which this case sits at the  
17 highest deferential end of the spectrum and that you should  
18 refrain from evaluating the evidence substantively. That's not  
19 how substantial evidence works, and if it was there wouldn't be  
20 a substantial evidence standard because you wouldn't be doing  
21 anything other than deferring to the State Engineer's factual  
22 findings.

23           We've said it a couple of times, more than a couple  
24 of times that the substantial evidence standard requires the  
25 Court to determine whether a reasonable mind would accept the

1 evidentiary basis of the State Engineer's decision as adequate.  
2 That does not mean that -- that does not -- what the State  
3 Engineer proposes, that essentially he can weigh evidence of  
4 one party more than another, he can be persuaded by whatever he  
5 finds to be persuasive, and that not being persuaded by  
6 someone's evidence is not a legal failing, it's just his  
7 decision not to be persuaded by that evidence. But that  
8 doesn't satisfy the substantial evidence standard because the  
9 question remains.

10           And what the function of the Court is is to determine  
11 that whatever the basis of the State Engineer's decision was  
12 must be -- must meet the objective standard of a reasonable  
13 person who is looking at the same evidence. And that  
14 reasonable person -- you have to decide that a reasonable  
15 person would have deemed that evidence to be adequate. That  
16 means you have to look at the evidence. You have to do your  
17 best to understand what the State Engineer was thinking, why  
18 they were evaluating the evidence they were, why the State  
19 Engineer was persuaded by what he was persuaded by, and you  
20 have to look at that in the context of the record as a whole.

21           The idea of deference is that -- and it's kind of  
22 slippery. It's hard to decide what that actually means when  
23 you're talking about substantial evidence. But what the Nevada  
24 Supreme Court has said in *Wilson v. Pahrump*, which is the case  
25 that the State Engineer cites for this proposition of kind of

1 peak deference, is that the deference owed is in relation to  
2 the rule that the reviewing court is not to substitute its  
3 judgment for that of the State Engineer. What that means is  
4 it's not your job to decide whether the State Engineer was  
5 right or wrong, it's your job to decide whether there is a  
6 legitimate basis for the State Engineer to have made the  
7 decision that he did. And that's where the notion of arbitrary  
8 and capricious in this comes in.

9           The reason I bring that up is I just want to talk  
10 about a few pieces of evidence that we haven't talked about in  
11 relation to the standard and give you a sense of how I think  
12 you can go about looking at the record. So we have talked in  
13 our briefs and other people have about the idea that some of  
14 the evidence that was presented to the State Engineer was not  
15 of a sufficient quality to allow him to reach the decisions he  
16 reached about the relationship of the basins and the pumping  
17 levels. And Ms. Peterson had talked about this, too. You  
18 know, there was evidence put in by Vidler at the hearing about  
19 the difficulty of measuring water levels in wells. You know,  
20 you heard about transducers and so forth.

21           There was also evidence put in at the hearing from, I  
22 believe it was North Las Vegas, that talked about the impact of  
23 barometric pressure on water levels and that what your  
24 barometric pressure is could have an impact on what your water  
25 levels are. The idea is that this is another factor that could

1 lead to a lower water level; something other than just the  
2 pumping going on. And so that raises the question of  
3 whether -- what was actually the cause of water levels  
4 changing.

5           We at the hearing also talked about the fact that  
6 there were disparate measurement techniques used to measure  
7 some of these water levels, groundwater levels and so forth.  
8 And that because those disparate measurement techniques were  
9 not calibrated to one another, it wasn't -- you couldn't  
10 reach -- you couldn't rely on the data because it wasn't clear  
11 that the data was measuring the same thing in the same way.

12           These are all faults that undermine the credibility  
13 of the evidence that the State Engineer relied on. And it is  
14 appropriate and, in fact, it is required that you look at that  
15 evidence that was put into the record as to the credibility of  
16 the evidence he relied upon and make a determination as to  
17 whether it was reasonable to rely on that evidence. That is  
18 the type of evidentiary review you should undertake.

19           You can do other things, too. It's not -- you know,  
20 a reasonable person wouldn't conclude that there is a rational  
21 basis to reach a particular factual conclusion if there's one  
22 fact in favor of that conclusion and a thousand facts against  
23 it; right? So the weight of the evidence is something else you  
24 can look at. And so you have a lot of tools at your disposal.

25           It is not an attractive task, but it is something the

1 Court has to do. And I'm not suggesting you're not going to do  
2 it and don't want to do it, but I do think the way that the  
3 standard has been talked about suggests that you're not  
4 supposed to do a review of that kind at all, and that's not the  
5 case.

6 The next area I want to talk about is the due process  
7 concerns that we've raised and that have been discussed. So we  
8 raised due process concerns, as we've talked about before, in a  
9 number of different -- or with respect to a number of different  
10 aspects of the case. Principally, our due process concerns  
11 relate back to the notice provided in the case. You know, I  
12 don't know Your Honor's career chronology, I don't know how  
13 much administrative law experience you have. Certainly you  
14 obviously have experience with notice.

15 THE COURT: Absolutely zero. I was a criminal  
16 defense attorney before this.

17 MR. FOLETTA: Okay. Well, perhaps something like  
18 criminal law, notice is a -- is the fundamental due process  
19 consideration, generally.

20 THE COURT: So as a criminal defense attorney, I am  
21 very familiar with due process.

22 MR. FOLETTA: Right. But in the context of  
23 administrative law, what's so important about notice is that  
24 unlike, perhaps, in a court proceeding, whenever a government  
25 agency, in particular the State Engineer, is going to undertake

1 a particular action, there's a requirement that they provide  
2 the public with notice; right? And sometimes the nature of the  
3 notice depends on the nature of the action, but the fact is  
4 that every consequential government action of the type that  
5 we're talking about here is initiated with a notice.

6           You know, I don't want to call it an antiquated  
7 requirement because it's not, but sometimes you could view it  
8 as impractical because, you know, how many people are running  
9 around the State Engineer's office checking bulletin boards to  
10 see if something is going to potentially happen to them. But  
11 that notwithstanding, the law is crystal clear that notice is  
12 an essential requirement of due process as it relates to  
13 administrative proceedings like this.

14           The thing that's important to keep in mind about  
15 notice, and I think this is a general principle that is kind of  
16 in response to some of the things we've heard about this  
17 argument, is that the harm associated with failing to properly  
18 notice an administrative proceeding is presumed and that's  
19 because the harm occurs with respect to the public generally.

20           Notice is very much about the person who's not at the  
21 proceeding, not so much the people who are there, right,  
22 because there's a lot of professional people here who watch  
23 this stuff, who show up to State Engineer proceedings all the  
24 time, keep an eye on things and will be there potentially  
25 whether there's an appropriate level of notice or not. But

1 there's a lot of people who don't, and so the protection that  
2 notice affords is for the public generally.

3           So if there is a deficiency in the notice, it cannot  
4 be cured because, you know, all the same players who show up at  
5 all the State Engineer proceedings showed up at this hearing  
6 and should have had a pretty good idea about what was going on.  
7 That doesn't work. If the notice was bad, the notice was bad,  
8 and the case has to be vacated, as we've talked about before.

9           The reason I'm bringing that up principally is in  
10 response to the argument of the other side, for example, with  
11 respect to the criteria, the six -- the criteria of six. I  
12 think it was Mr. Taggart who suggested that, well, the criteria  
13 shouldn't have been a surprise to anybody. This is the type of  
14 criteria anybody who's looking at this type of data or trying  
15 to make this type of decision would rely upon. And so -- and  
16 everyone was there at the hearing. You knew we were having a  
17 hearing on 1303 so, you know, you had your opportunity to put  
18 evidence in and, you know, you should have known where this was  
19 heading. That kind of goes to my point, which is that it's  
20 irrelevant what people who were at the hearing knew or should  
21 have known about what the criteria was or was not going to be.

22           *Southwest Gas* and *Dutchess* are very clear that the  
23 State Engineer has to give notice to the public of the factual  
24 basis that the decision will be relied upon, and in this case  
25 that did not happen. I was just going to read the paragraph

1 that kind of makes that point, which is that -- this is in  
2 Order 1309 where the State Engineer is talking about the  
3 criteria and he says, quote, "The State Engineer has considered  
4 this evidence and testimony." He's talking about the evidence  
5 regarding consolidating the basins. He says,

6           On the basis of a common set of criteria  
7           that are consistent with the original  
8           characteristics considered critical and  
9           demonstrating a close hydrological connection  
10          requiring joint management in Ruling 6254 to  
11          6261, and more specifically including the  
12          following.

13          And then he lays it out. The point here of reading  
14          that quote is that the State Engineer was clearly articulating  
15          the criteria on the basis of his review of the evidence after  
16          the fact. He wasn't articulating a criteria that everyone  
17          should have known was taking place. It was the product of  
18          thought.

19          The other way we've raised notice was just in  
20          relation to the fact that it's our contention that a management  
21          and policy decision was made in this case, in particular the  
22          decision to consolidate the basins and subject them to  
23          conjunctive management and joint administration. The principal  
24          rebuttal to that is that really didn't change anything. You  
25          know, when we subjected these basins to conjunctive management

1 and joint administration, effectively removing the basin lines  
2 from the map, you know, that didn't -- affect is my term, a  
3 cognizable injury on new water rights holders in those basins  
4 because the State Engineer hasn't taken the next step to  
5 actually engage in additional management of the basins that  
6 might affect you differently now because you don't have the  
7 same priority you had when we were doing this basin-by-basin.

8 I think Mr. Robison talked about this really well  
9 when he talked about the affect of the order on his client. So  
10 he talked about the subdivision map and being shut down, you  
11 know, his client's project being shut down and that 1309  
12 effected a clear and concrete, you know, deprivation on his  
13 client in that way.

14 My clients are a little differently situated but  
15 they're no less harmed by the action the State Engineer took in  
16 1309, which is to say I think it's misleading to suggest that  
17 just because the next step hasn't been taken, you haven't  
18 already been deprived of something, because water rights  
19 holders clearly have -- a water right is a paper right. It  
20 is -- but notwithstanding that it's a paper right, it's still a  
21 property right, as we've heard many times. So it's the same --  
22 it's a bundle of sticks like every other property right. But  
23 very much because a water right is a property right, it very  
24 much is the legal attributes that make up the right.

25 And so property rights, if you have a piece of

1 property, say a piece of land, you can sell it; you can build  
2 on it; you can not do anything with it; you can hold onto it.  
3 Property rights -- or, excuse me, water rights are the same.  
4 You can sell it. You can ask the State Engineer if you can  
5 pump. You can move the water from one place to another. You  
6 can make decisions about how to run your business based on what  
7 you think you can do with the water, what your options might  
8 be. The point is that the attributes of the right are the  
9 things you can do with it in the context of the legal framework  
10 that governs it. So the legal framework that governs it in  
11 part is based on prior appropriation.

12           Obviously, when you change the way that the State  
13 Engineer is going to address any request you might make in  
14 connection with your right, meaning if you change the framework  
15 or the backdrop that is going to frame his decision whether to  
16 allow you to pump or not, allow you to move your right or not,  
17 you have affected a change to the right. Right? You've made  
18 it different than it was before. And so just because they  
19 haven't come in with a second step and decided who's going to  
20 get water and who doesn't doesn't mean that nothing yet has  
21 happened. Clearly very much has happened.

22           People who are now in the position that my clients  
23 are, having to make decisions about where they're going to get  
24 the water, are they going to be able to get water, can they  
25 grow their business here, do they need to move, there are all

1 sorts of considerations now they have to make because the  
2 nature of their right changed. That is a -- you know, was  
3 proximately caused by 1309. And I think if you listen to some  
4 of the intervenors, they actually make that point for us.

5           You hear the -- like the Church, NV Energy, their  
6 kind of take is like, well, you know, if you hold on to water  
7 rights long enough in Nevada there's going to be some bumps in  
8 the road and what you've really got to understand is that all  
9 that really matters is how old is the right relative to every  
10 other right that comes after you, not just the ones in your  
11 basin.

12           But everybody on this -- you know, I'm going to  
13 regret this, but a new mega-list of water rights that is now  
14 the first water right ever issued in Nevada, and the person on  
15 the bottom is the last one. That may be conceptually accurate  
16 to some degree, but the fact is those basin lines have  
17 differentiated that list for decades. And so by changing that  
18 fundamentally, they've changed the nature of the rights that my  
19 clients hold. And consequently there clearly was an impact  
20 that gives rise to the due process consideration.

21           The other area we talked about due process in is --  
22 there's a couple and I'll go real fast. You know, Your Honor  
23 had highlighted this in some questionings. The other due  
24 process consideration was just the establishment -- or failure  
25 to notice the fact that a criteria is going to be established

1 at all. I won't talk about that, but that's just sort of a  
2 reminder that that's on the due process kind of checklist.

3 The other thing that's in our brief that I will talk  
4 about just probably for one minute is the idea that even the  
5 consideration of the Endangered Species Act and the specific  
6 impact on the dace was not noticed at all. So if you go back  
7 and you look at the notice, you've got the 1303 categories.  
8 There's nothing in there about the dace, endangered species,  
9 anything like that. There is a criteria about stream flows,  
10 but when you look at the decision the impact of stream flows on  
11 the dace is prominent. It's one of the key planks of why the  
12 State Engineer made the decision he made.

13 And again, going back to *Dutchess* and *Southwest Gas*,  
14 you've got to know what the factual basis of the decision is  
15 going to be. There was no specific notice of particular impact  
16 on the dace being at issue. And so -- or maybe not being at  
17 issue, but potentially serving as a fundamental reason why the  
18 State Engineer would take the action they did, and so there's a  
19 failing there as well.

20 The last area I really want to talk about is the  
21 question of authority. I think that the best place for Your  
22 Honor to -- or the best way to work through this is to in  
23 particular focus on the statutes that the State Engineer cited  
24 in the order; right? The statutes that the State Engineer  
25 cited in the order because there's, I think, four or so that

1 are in the section on authority. And then to consider the  
2 arguments that the State Engineer has made here as to what his  
3 authority was.

4 The principal argument that I heard or articulation  
5 of the source of authority is the idea that the State Engineer  
6 has got a duty to protect senior water rights. The State  
7 Engineer has got a duty to preserve decreed rights, or to not  
8 violate a decree, rather. The State Engineer follows the best  
9 science. That's the policy of the State. And so if the best  
10 science says that senior rights are going to be jeopardized or  
11 decreed rights will be violated in the absence of action from  
12 the State Engineer, then the State Engineer has the authority  
13 to take action and protect those rights. I think that's a very  
14 problematic view, and I'll say why.

15 But just in terms of the analysis itself, the reason  
16 I'm suggesting that you focus on the order and the State  
17 Engineer's arguments is not because I don't think other people  
18 have things to say about it, and I think people have pretty  
19 much dispatched with all these arguments. So they don't  
20 concern me.

21 But the question is did the State Engineer have  
22 authority to do what he did in this case? It's not a search  
23 and rescue mission to go out and try to find a statute, any  
24 statute, a principle, any principle that could somehow, some  
25 way be brought enough maybe to justify this action. The State

1 Engineer did what he did in this case for a reason and the  
2 question is, is the reason legitimate? Is the reason -- is the  
3 law that he provides you a basis to do it?

4           The reason I think that the way Mr. Bolotin  
5 characterized the legal basis here is so problematic is because  
6 it is -- it undermines the entire statutory scheme. And I  
7 talked about this before, but if the idea is that -- or the  
8 idea he seems to be expressing is like we've got this prime  
9 directive, we protect senior rights, we don't violate decreed  
10 rights, we follow the science. If the science says something  
11 bad is going to happen to those people, we do something. We  
12 have the authority to do something to stop it.

13           There is no rule of law that says that. There's no  
14 grant of authority that says, State Engineer, go forth and  
15 protect senior water rights. It reflects, I think, an  
16 over-generalization of the prior appropriation doctrine. What  
17 I mean by that is that we have a very specifically articulated  
18 regulatory scheme for water law. The State Engineer's  
19 authority is set forth in numerous statutes across several  
20 chapters. People have pointed out multiple times that  
21 virtually in every case or every statute that seems to be even  
22 relevant to this conversation, it articulates a basin by basin  
23 approach.

24           What the State Engineer is saying is that, well,  
25 that's all fine, that statutory scheme works as long as the

1 science doesn't tell us we need a different rule, because if  
2 the science says that basin by basin doesn't work because  
3 senior water rights will be undermined or jeopardized because  
4 of applying the rules in that way, then we get to do it a  
5 different way. We get to apply the management tools we have on  
6 a multi-basin basis, on a joint administration basis under  
7 conjunctive management. And that throws the baby out with the  
8 bath water, like completely, because it means that the entire  
9 regulatory framework we have only applies under a certain set  
10 of circumstances. But the Legislature didn't say that.

11           The Legislature doesn't say this is the system for  
12 when the science is consistent with the system, and when the  
13 science is not consistent with the system you can do whatever  
14 you need to do. Like I said, there's no rule for that.  
15 There's no rule that authorizes the State Engineer to sort of  
16 freelance and figure out ways to protect senior water rights  
17 holders.

18           The prior appropriation rule, which is where all this  
19 comes from, if you listen to the State Engineer, is  
20 specifically articulated in the statutes. And what's  
21 interesting about it, and you can kind of find this -- I'll  
22 give you a few. NRS 533.430(1), NRS 533.265, I think it's (2),  
23 and 533.090(1) and (2).

24           These statutes -- I got this from the *Walker River*  
25 case that people have been talking about the last couple days

1 where the court says,

2 Nevada water statutes embrace prior  
3 appropriation as a fundamental principle. Water  
4 rights are subject to existing rights. They're  
5 given dates of priority and determined based on  
6 relative rights.

7 So this is the Nevada Supreme Court articulating the  
8 source of the prior appropriation rule.

9 These statutes, again going to my point, don't say  
10 that the State Engineer can do what he needs to do to protect  
11 senior water rights. They articulate a clear basis for  
12 application of the prior appropriation rule. So it applies in  
13 a context; that's the point. And so the prior appropriation  
14 rule applies.

15 For example, if my client wants to go out and pump  
16 water, they've got to contend with the prior appropriation rule  
17 and the State Engineer can't let them pump water if it's going  
18 to jeopardize a senior right. It's not -- the prior  
19 appropriation rule isn't a grant of authority.

20 If you look at the State Engineer's brief, what he  
21 says is we've got an ongoing duty to protect senior water  
22 rights. End statement. No citation, nothing, no statute, no  
23 case, no nothing. It's taken as a given that this is just  
24 something the State Engineer does. And I think at a high level  
25 that's true, but it's not fair to use a generalization that

1 describes the nature of the State Engineer's obligations under  
2 the statutory scheme to claim that he's got authority separate  
3 and apart from the existing statutory scheme. He's saying that  
4 rule sits above everything else and it doesn't. It sits in the  
5 context of everything else and that's how you have to  
6 understand it.

7           The last kind of technical point I want to talk about  
8 is -- well, maybe I should just tie that off. Again, just to  
9 close that point, it's our view, obviously, that the State  
10 Engineer does not have the authority to make this decision.  
11 It's certainly not based on his kind of like policy-driven  
12 articulation of his obligations and it's not rooted in any  
13 specific statute we've talked about here.

14           The timeliness issue that Mr. Dotson raised a couple  
15 times about whether we could even be here, I don't mean this  
16 disrespectfully, but honestly when I read that the first time I  
17 just completely threw it away. I thought, well, that's  
18 ridiculous. Like, of course we're legitimately in this court.  
19 And maybe it's because I do administrative law all the time. I  
20 don't know. But what this order says, that order in  
21 paragraph 1 says,

22                           The Lower White River Flow System  
23                           consisting of Kane Springs Valley, Coyote  
24                           Springs Valley, et cetera -- it names all the  
25                           other valleys -- is hereby delineated as a

1           single hydrographic basin. The Kane Springs  
2           Valley, Coyote Springs Valley, dot, dot, dot,  
3           are hereby established as sub-basins within the  
4           Lower White River Flow System hydrographic  
5           basin.

6           I mean, the State Engineer exercised authority. It's  
7           in an order. The order is live. It's appealable. It doesn't  
8           matter that even if, which it didn't, but let's say there's a  
9           prior order on the topic, it doesn't matter. I mean, state  
10          agencies visit and revisit issues like this over and over and  
11          over again, and if they exercise authority in the form of an  
12          order, it's appealable. There's no res judicata. There's  
13          nothing like that. We're clearly legitimately here. And I  
14          agree with everything people have said about interim orders.

15          I think just to close, I think I would say that the  
16          thing that's kind of noteworthy about this proceeding is that  
17          the decision to subject the basins to conjunctive management  
18          and joint administration didn't do anything to actually solve  
19          the problem. And that's not for this Court to decide, but it  
20          has really just created chaos and confusion and it's been  
21          counterproductive.

22          And whether or not the State Engineer intended to  
23          immediately scramble priorities, as people seem to concede now,  
24          it would be the inevitable result of the joint administration  
25          of the basins and has left everybody trying to figure out what

1 comes next and how to deal with it. And that alone  
2 demonstrates, I think, the nature of the harm that has occurred  
3 in the case. The State Engineer kind of suggests that, well,  
4 that wasn't the intent of what we were doing and the idea is  
5 that we will deal with management later. But if that's true,  
6 then there was no reason to consolidate the basins, subject  
7 them to conjunctive management and joint administration in the  
8 first place. It was done to set the table for the future  
9 actions.

10 That doesn't mean nothing has happened, but it was  
11 the first step in a series of actions to manage the basins.  
12 But it had to be taken because of how they want to manage the  
13 basins. If they want to subject everyone to a pump limit, if  
14 they want to, you know, curtail rights, they had to take this  
15 step first because obviously they felt like it was the best way  
16 to manage everybody by putting them in the bathtub together.  
17 That's a real thing, and it has had no really perceptible  
18 impact on the outcome of the substantive issues, I'll say, to  
19 date.

20 The one other point I want to make is that there's a  
21 question about whether this whole thing is sort of form over  
22 substance and it goes to kind of the authority question. Like,  
23 did the State Engineer actually do something different or could  
24 he do indirectly what he did directly in the order? And I  
25 think that's kind of a difficult question to answer. The first

1 part of the answer is no. If what you're saying is could he  
2 scramble rights within a basin on his own --

3 THE COURT: No.

4 MR. FOLETTA: And I know you're not asking that.

5 THE COURT: No. That's not what I'm --

6 MR. FOLETTA: But I'm saying that, no, he couldn't do  
7 that; right? And so my point is that that's why 1309 is not --  
8 is not something that did nothing or something that could be  
9 achieved another way. It did a very specific thing that could  
10 never happen any other way.

11 The other part of the question is can the State  
12 Engineer, I suppose, manage things the same on a basin by basin  
13 basis, or at least consider some of the same considerations?  
14 And I agree with what other people have said, is that I think  
15 he could to some degree do all of that. It's a little hard to  
16 say because we don't know what the tools are he's going to use  
17 next.

18 With all that, Your Honor, we would ask that you  
19 vacate the order for the reasons we've described. Thank you.

20 THE COURT: Thank you.

21 All right. So why don't we take a ten-minute break.  
22 Does that -- why don't I say this. Why don't we do a  
23 fifteen-minute break. So we'll come back at 2:05. And then I  
24 think we close up with Lincoln and Vidler. Thank you.

25 (Proceedings recessed at 1:52 p.m., until 2:09 p.m.)

1 THE COURT: All right. Are we back on the record?

2 COURT RECORDER: Yes.

3 THE COURT: Okay. Are we good on time?

4 Great. So, Mr. Klomp, you're going first?

5 MR. KLOMP: Yes. Thank you, Your Honor.

6 THE COURT: Okay.

7 MR. KLOMP: I'll go first and then Ms. Peterson will  
8 wrap up, the co-petitioner.

9 THE COURT: Sounds good.

10 MR. KLOMP: Wayne Klomp on behalf of Lincoln County  
11 Water District. And again, I just want to echo the sentiments  
12 of all counsel of gratitude for you and the courtroom staff for  
13 your patience with all of us.

14 THE COURT: Well, let me just say to everyone, it has  
15 been a pleasure to have the finest water law attorneys in our  
16 state in my courtroom. It's been a real treat for me. So I  
17 really appreciate all the hard work that you've all put into  
18 this. I know that pouring through 50,000 pages of record on  
19 appeal and getting the briefs prepared for me has been a  
20 monumentous task, so I do want to say that I appreciate all of  
21 your hard work.

22 MR. KLOMP: Thank you, Your Honor. So in the famous  
23 last words of every attorney ever, I will be brief.

24 ARGUMENT FOR LINCOLN COUNTY WATER DISTRICT

25 MR. KLOMP: First, I just want to correct a couple of

1 issues that were made during answering statements and then  
2 conclude with one point about the bundle of rights that  
3 Mr. Foletta spoke about.

4           There was a statement that the case *Mineral County*  
5 does not apply because it was dealing with a decree and here  
6 we're dealing generally with water rights, groundwater rights,  
7 not a decree. *Mineral County v. Lyon County* is 473 P.3d 418.  
8 That case was a certified question to the Nevada Supreme Court  
9 from a federal court asking about the reallocation of or  
10 reprioritization of rights and the application of the public  
11 trust doctrine to Nevada's -- all of Nevada's water,  
12 groundwater, navigable waters and non-navigable waters.

13           The conclusion of the *Mineral County* case was that  
14 although -- and this is from page 425:

15                           Although we recognize that the public trust  
16 doctrine applies to prior appropriated rights  
17 and that the doctrine has always inhered in  
18 Nevada's water law, we hold that Nevada's  
19 comprehensive water statutes are already  
20 consistent with the public trust doctrine.

21           So that tells us two things. One, yes, the public  
22 trust doctrine applies. But also, that the comprehensive  
23 statutory scheme already accounts for the public trust  
24 doctrine. It does not provide an independent basis for Order  
25 1309.

1           And specifically, the *Mineral County* case goes on to  
2 talk about that principle, that it's already within the  
3 statutory scheme. And now I'm going to turn to page 427 of  
4 that decision:

5                       Finally, the State Engineer is permitted to  
6 declare preferred uses and regulate groundwater  
7 in the interest of public welfare, which  
8 includes -- and then it goes into the statutory  
9 basis for doing those things -- curtailing  
10 groundwater rights during water supply shortages  
11 for example.

12           And then it goes on to say,

13                       The statutory scheme therefore sufficiently  
14 places an affirmative duty on the State Engineer  
15 to maintain public trust resources.

16           And again, that's from the Nevada Supreme Court  
17 stating that that is not an independent source of authority.  
18 The authority is within the comprehensive statutory scheme.  
19 Second, there was a criticism by one of the parties about the  
20 placement of -- I think it's KMW, the well for -- in Kane  
21 Springs Valley.

22           THE COURT: For Kane Springs. Uh-huh.

23           MR. KLUMP: Yeah. And I wanted to talk a little bit  
24 about why that was placed there, and we're going to go to  
25 Slide 2. So this is a memorandum to the State Engineer from a

1 deputy state engineer. It's dated June 21st, 2000. This is in  
2 the record at 36658.

3 And go to Slide 3. And I'm going to have trouble  
4 reading this because the part we want is under that blackout.  
5 But what it says is -- he's talking about placing two more  
6 wells in the carbonate on the north end of CSI's project. And  
7 it says,

8 One should be along the line between MX-5  
9 and Ash Springs and the other one -- the other  
10 somewhere in the mouth of Kane Springs Wash as  
11 it enters Coyote Springs Valley.

12 So that provides really the basis for why that well  
13 was placed there. It was where the State Engineer wanted it.

14 And I want to follow up now with another one of  
15 Mr. Foletta's statements. He talked about the bundle of sticks  
16 and how the -- we have vested property rights. A water right,  
17 an appropriation of water is a vested property right.

18 And go back to Slide 1. So when Lincoln and Vidler  
19 received their appropriation under Ruling 5712, the State  
20 Engineer was required under the statutory scheme to make  
21 certain findings and by law he was prohibited from  
22 appropriating water. And this is kind of a case study. This  
23 is what happened in Ruling 5712, but you can imagine that it  
24 will apply to any water right that's been -- a groundwater  
25 right that's been appropriated.

1           And we talked about these in our opening, and I'm not  
2 going to go through them again, but when Ruling 5712 came out,  
3 that was 2007. None of the parties that are in this room  
4 appealed that decision except for we did, and it was resolved.  
5 That appeal was resolved. But those parties had 30 days to  
6 appeal, and none of them did.

7           One of the bundles of those rights, when you are  
8 granted an appropriation, is that you have to use that  
9 appropriation where you say you're going to use it; right? So  
10 in our application we said we're going to use this in Coyote  
11 Springs Valley and we were awarded an inter-basin transfer of  
12 that water.

13           One of the other rights you have is you have the  
14 right to use it to draw the water out of the ground from the  
15 place that you say you're going to draw the water out of the  
16 ground. If you want to move that place, you have to apply for  
17 a permit from the State Engineer, a permit to change the point  
18 of diversion; right? You can't move the point of diversion to  
19 a place outside of your hydrographic basin because that would  
20 be a new appropriation of water.

21           THE COURT: In a different basin?

22           MR. KLOMP: What's that?

23           THE COURT: In a different basin?

24           MR. KLOMP: Correct. And so our -- Ruling 5712 ties  
25 that to Kane Springs Valley basin. In 2013, so this would have

1 been after the pump test, there was an application to change  
2 the point of diversion for the water rights appropriated with  
3 Ruling 5712. And this is in the record at ROA 994.  
4 Application numbers 82727 and 82728 were filed with the State  
5 Engineer's Office to change the point of diversion within --  
6 again, within Kane Springs. And those were granted and also in  
7 2013.

8 None of the parties here protested those change  
9 applications, but they had 30 days to do so following the  
10 granting of those applications. And the statutory reference  
11 for changing a point of diversion is 533.345.

12 The reason that I bring this minutia up is because it  
13 illustrates the bundle of rights. The parties that have water  
14 rights outside of Kane Springs can apply for -- prior to 1309  
15 they could have applied for a change of point of diversion  
16 within the hydrographic basin that they were in. Following  
17 1309, they can now apply for a change of point of diversion  
18 within the entire Lower White River Flow System and maintain  
19 their priority date, whereas before they could not do that. So  
20 that is just another example of one of the ways that 1309  
21 fundamentally changes the nature of the water rights that  
22 Lincoln and Vidler appropriated in Kane Springs, but also the  
23 nature of water rights within the Lower White River Flow  
24 System.

25 So when the State Engineer says that he doesn't have

1 to follow *stare decisis*, that may be true in a court or in an  
2 opinion from the court, but it is not true when it comes to  
3 depriving people of their vested property rights and it's not  
4 true when it changes, fundamentally changes the nature of those  
5 property rights. And with that, Your Honor, I think that was  
6 fairly brief, but I'm going to turn the time over to  
7 Ms. Peterson.

8 THE COURT: That was brief. Okay.

9 **ARGUMENT FOR VIDLER WATER COMPANY, INC.**

10 MS. PETERSON: Thank you, Your Honor. Karen  
11 Peterson. And I'm just going to start with the question that  
12 you've asked some of the other parties about connectivity  
13 because I figured we would probably get it, so let's just start  
14 right there. And what we have noticed in this proceeding and  
15 throughout all these proceedings is that the parties -- well,  
16 the State Engineer and SNWA, Muddy Valley Irrigation Company,  
17 the intervenors and Center for Biological Diversity all equate  
18 connectivity with impacts and that --

19 THE COURT: With impasse?

20 MS. PETERSON: Impacts.

21 THE COURT: Okay.

22 MS. PETERSON: Impacts to their rights, so that --

23 THE COURT: Oh, impacts.

24 MS. PETERSON: Impacts. I-m-p-a-c-t-s.

25 And that connectivity equates with impacts and that

1 therefore all these water rights, all these individual water  
2 rights and all these individual basins need to be managed --  
3 jointly managed and conjunctively managed. And connectivity  
4 does not equate to impacts to other rights, and that's  
5 displayed outright in Order 1309. And what the State Engineer  
6 found in portions of Order 1309 --

7 And, Mr. Hurth, if you could go to the pumping slide.

8 THE COURT: Which slide is this?

9 MS. PETERSON: Slide Number 5.

10 And again, this is the Lower White River Flow System  
11 and the Kane wells are not on this map because this is the  
12 result of the pumping test from 1169 and Kane wasn't involved  
13 in that. But the Kane wells are where the boundary is there.  
14 Oh, gosh. Yeah, the red dot, but I don't know that the record  
15 is going to be able to see the red dot. So it's on the line  
16 between Coyote Spring Valley Basin 210 and Kane Springs ranch  
17 or Kane Springs Valley.

18 I probably have a better way to say this. It's  
19 south, the south end of the valley, southwest portion of the  
20 valley. And I know it's in the record where those wells are.  
21 But the pumping -- the State Engineer found in Order 1309 and  
22 it's in the Record on Appeal at page 7 and also at page 60 that  
23 the pumping of 5,290 acre feet from Coyote Springs caused sharp  
24 declines in discharge at the springs. And the State Engineer  
25 also found in Record on Appeal at 65 that the Muddy River

1 Spring area -- and those are delineated on your map here --  
2 that the alluvial and carbonate pumping affects the Muddy River  
3 and captures the river flow.

4 So you also see the pumping on that map with regard  
5 to the various parties that have been identified, the pumping  
6 in those basins. And so we already know from the pump test  
7 where the impacts are from pumping and those -- what pumping  
8 affects the Muddy River and what pumping affects the springs  
9 for purposes of the Moapa dace. And so what is happening with  
10 Order 1309 is that they're pulling Kane Springs in.

11 Let's say they're pulling Garnet Valley in. And  
12 there's no evidence in the record that the pumping in  
13 particular for like the wells in Garnet, there's actually no  
14 evidence of pumping from the wells in Kane impacts the springs  
15 or the dace, yet they're pulled into this joint management and  
16 conjunctive-use-management scheme that the State Engineer has  
17 set up, and their rights have been impacted because of the  
18 8,000 acre feet cap that the State Engineer has put on the  
19 pumping. Yet again, there's no evidence that pumping from Kane  
20 Springs at all or pumping from the other wells -- again, Garnet  
21 is probably the furthest away -- that that pumping is the  
22 pumping that impacts the springs or the river.

23 And so that's what the beef is about just relying on  
24 connectivity and throwing everybody in is that our rights, Kane  
25 Springs, and we'll show you later on in the chart. I mean,

1 they're way down at the bottom of that printout that  
2 Mr. Robison had with regard to where everybody stands now based  
3 upon the reordering of the priorities.

4           So, for example, Kane Springs, our rights -- there's  
5 no evidence our rights would affect anybody in Garnet Valley,  
6 anybody's pumping in Garnet Valley. Yet again, we're junior.  
7 We're not able to pump our rights because we're lower in  
8 priority than somebody in Garnet Valley or somebody in Hidden  
9 Valley.

10           I don't think there's anybody in Hidden Valley, but  
11 even in -- I can't even read all these basins that are in  
12 there. But we're being prejudiced in not being allowed to pump  
13 our rights because we've been thrown into this basin, yet  
14 there's no evidence that our pumping impacts anybody else.

15           And so the other thing I hear is everybody kind of on  
16 that side of the room talking about existing rights, existing  
17 rights, existing rights, and that our rights have to yield to  
18 everybody else just because now we're the lowest ones in this  
19 super-basin, with the lowest priority in this super-basin, yet  
20 we're not impacting anybody by our pumping or there's no  
21 evidence that we're impacting anybody by our pumping.

22           And my question is -- our question is, the rights  
23 that are in the Muddy River Springs Area and the rights that  
24 are in the lower Coyote Springs Area, whose rights, even though  
25 they're senior rights -- let's say they're the Church's rights

1 or NV Energy's rights, they're Moapa Valley Water District's  
2 rights, they're also subject to existing rights. They're  
3 junior to the Muddy Valley Irrigation Company. How come their  
4 rights -- how come their rights aren't enforced as subject to  
5 existing rights because they're the rights that are impacting  
6 the springs and the river?

7 They're shifting by the scheme that they've created.  
8 They're shifting their burden of their rights being subject to  
9 existing rights and shifting that to make us give up our water  
10 rights, which are not impacting anybody else's, so that their  
11 priorities are preserved, but ours are not, and we're not even  
12 impacting anybody.

13 THE COURT: So as I understand your argument, you're  
14 talking about the proportional impact of where those -- where  
15 that pumping is done to the Muddy River or the springs as it  
16 relates to how the rights would now be recategorized.

17 MS. PETERSON: Correct.

18 THE COURT: Okay.

19 MS. PETERSON: And so --

20 THE COURT: I mean, so what you're saying is just  
21 because it's connected doesn't mean that proportionately  
22 there's a higher impact or a lesser impact. In fact, I think  
23 what you're arguing is -- and I just want to make sure that I  
24 have your argument, you know, straight, is that there are  
25 certain water rights holders who are closer to the Muddy River

1 and the springs and their connectivity and the pumping has a  
2 much higher, direct correlation to the reduction in the springs  
3 and the Muddy River, but everyone is all kind of put in that  
4 same pot of where they are depending on when they got their  
5 rights.

6 MS. PETERSON: Correct.

7 THE COURT: Okay.

8 MS. PETERSON: And it even gets better. If you look  
9 at the Notice of Alleged Violation that Mr. Taggart put up  
10 yesterday, and we have that slide and it starts with Slide 4,  
11 and this is the Notice of Alleged Violation, the first page, I  
12 think, of it. But in this first paragraph here he indicates --  
13 or, sorry, SNWA indicates that studies performed in the Lower  
14 White River Flow System have demonstrated that groundwater  
15 pumping in the Lower White River Flow System ultimately  
16 depletes Muddy River stream flows on a one-to-one ratio and  
17 pumping in certain areas, such as the Muddy River Springs Area,  
18 cannot occur over the long term without depleting spring and  
19 stream flows.

20 And so the State -- like I said, the State Engineer  
21 has already found in Order 1309 that Coyote Springs -- and he  
22 has it twice in there -- caused sharp declines in discharge at  
23 the springs. And that the Muddy River Springs Area, both the  
24 alluvial and the carbonate pumping, affects the Muddy River and  
25 captures the Muddy River flow. And it also indicates further

1 in that ruling that he's not going to allow -- he's talking  
2 about where you can change your water rights in the Lower White  
3 River Flow System -- he's not going to allow anybody to put  
4 more water rights, more water rights into the Muddy River  
5 Springs Area to pump because obviously that's going to cause a  
6 greater impact.

7           So -- and I think it builds on what Mr. Foletta was  
8 saying because obviously if we -- if I applied for a water  
9 right and I was right next to the spring and I was going to  
10 impact the spring, yeah, the State Engineer should not grant  
11 that water right application. He shouldn't grant that water  
12 right application. And when we applied in 2005 and were  
13 granted our water rights in Kane Springs, the State Engineer --  
14 he did make that determination that he didn't think the  
15 hydraulic connection was enough for the quantity of water that  
16 we applied and received, that it would impact the Muddy River  
17 springs or the dace.

18           And then now he's changed that after Order 1309, but  
19 he still indicates in Order 1309, and we've cited it on a slide  
20 and it's ROA at 55, that the degree of hydraulic connectivity  
21 is not known yet for Kane, but I'm going to put you in because  
22 I want to -- put the basin in because I want to manage that  
23 basin along with everybody else. But we don't know exactly what  
24 the hydraulic connectivity is with Kane Springs, and so I'm  
25 going to put you in so that there can be further study.

1           So he's saying he doesn't know what our hydraulic  
2 connectivity is with regard to the dace and the springs and  
3 what the connectivity is and what the level of connectivity is.  
4 But he acknowledges that there's a 60-foot change in elevation  
5 between the water levels in Kane Springs. And it's the water  
6 levels in the Lower White River Flow System that he's talking  
7 about is the change, you know, that 60 feet, that six stories,  
8 and that's evidence of low permeability under his six criteria  
9 and also weak hydraulic connectivity. So the point I'm trying  
10 to make is that he's thrown us all into this huge area.

11           The pumping test shows that there's been impacts from  
12 certain wells already in certain areas. They caused sharp  
13 declines in the springs, which of course could affect the dace.  
14 And yet, he's thrown everybody in together and treating us all  
15 equally with all -- you know, subject to seniority and allowing  
16 those -- the pumpers that are closest to the river and causing  
17 the most impact, allowing them to continue to pump, but then  
18 not allowing us to pump because he's got this -- I agree with  
19 CSI that he backed into this artificial 8,000 cap and he's  
20 affecting everyone and creating chaos. So, again, basin by  
21 basin is appropriate because he could handle this problem by  
22 looking at the --

23           Could we put that map back up.

24           -- he could handle the problem by looking at the  
25 lower Coyote Springs Valley basin. He could look at the

1 problem in the Muddy River Springs Area. He could manage those  
2 basins.

3           If you look at the pumping -- if you're talking about  
4 a one-to-one ratio, if you look at the pumping -- could you put  
5 up the pumping records from 2017. And this is in the ROA at  
6 510. If you look at 2017 and you look at what the pumping is  
7 from the Muddy River Springs Area, it's 3,553 acre feet. And  
8 then if you look at Coyote Springs Valley, it's 1,961. I  
9 didn't do the math to add those up beforehand. That's like  
10 7,000 acre feet right there.

11           If SNWA is correct that there's a one-to-one ratio,  
12 what they're saying is when you pump 3,553 acre feet out of  
13 Muddy River Springs Area, it's a one-to-one ratio with the  
14 river flows. You're taking one foot out of the river. That's  
15 what they're saying there in their Notice of Alleged Violation.  
16 And I haven't looked at their studies to know if that's true or  
17 not, but that's what they're saying. So if you want to find  
18 your river flows back, I mean, that's where you get it, right  
19 from that pumping right there.

20           But you don't cut off the property rights of Kane,  
21 and you don't cut off the property rights of Garnet. You don't  
22 cut off the property rights of Cogen because of something  
23 that's being caused by what's going on there in that pumping  
24 with Coyote Springs basin and Muddy River Springs Area. And  
25 that's not how it's been done on a basin-by-basin area, a

1 basin-by-basin basis, you know, in history.

2           You look at the basin and you figure out what the  
3 issues are with regard to that basin and you take action based  
4 on that. And that's why we think it's appropriate because,  
5 again, it doesn't create all the chaos, as Mr. Foletta was  
6 talking about here. It doesn't create all the chaos across  
7 seven basins when it doesn't need to.

8           THE COURT: So let me ask you, because I know that,  
9 you know, you've been making a point that first the Nevada  
10 State Engineer showed that there wasn't enough connectivity.  
11 Now he's saying that there is connectivity. Would you agree,  
12 though, that if the science dictates that there is more impact  
13 or more connectivity that he could reverse himself if he  
14 followed the proper statutory framework?

15           MS. PETERSON: With regard to like the Kane rights?

16           THE COURT: Yes.

17           MS. PETERSON: So if we are pumping our Kane rights  
18 and they impact somebody else that has a higher seniority, that  
19 issue has to be addressed. We can't -- by our pumping we  
20 cannot impact somebody else's water rights that's senior.

21           THE COURT: Right. But your beef, I guess, is more  
22 that everyone was lumped into the same mega-basin as opposed to  
23 handling it basin by basin under the statutory framework?

24           MS. PETERSON: Right.

25           THE COURT: Okay.

1 MS. PETERSON: And knowing what he knows from the  
2 pump test where the areas, the problem areas are.

3 THE COURT: Proportional impact.

4 MS. PETERSON: His findings are -- I'm not sure I  
5 understand what you mean by --

6 THE COURT: So what I'm saying is that some areas may  
7 impact, you know, the Moapa dace. Let's just say the Moapa  
8 dace at greater rates than other places.

9 MS. PETERSON: Yes.

10 THE COURT: Okay.

11 MS. PETERSON: Yes. Yes. And then I did want to  
12 address conjunctive management. And I think it was Mr. Dotson  
13 who put up the slide, the Davenport slide yesterday or whatever  
14 day, that conjunctive management is -- oh, gosh, separate -- is  
15 not separate administration for surface and groundwater,  
16 they're treated as one source. And our legislation is not  
17 there yet. That's our position: It's not there yet. And you  
18 know the reasons.

19 The 2019 legislation and one position there, what  
20 happened here in 1309, and then I'm just going to raise it just  
21 for the legal conflict, issue of 1329. So we don't think there  
22 has been a reboot of Nevada water law by the policy declaration  
23 that there can be conjunctive management.

24 And I think the questions that you were asking some  
25 of the other -- like CSI, I know you asked them specifically

1 and they were saying -- what I heard what they were saying was  
2 that if there is a conflict between their right and a surface  
3 water -- a senior surface water right, or if there was a  
4 conflict even with a senior groundwater right, that they would  
5 understand that they would have to address that and that could  
6 affect. But, see, to me that's that impacts analysis or the  
7 conflicts analysis and the subject to existing rights analysis.  
8 It's not conjunctive use management.

9 THE COURT: So tell me then, what, in your opinion,  
10 does conjunctive use management mean.

11 MS. PETERSON: Okay. And I wouldn't even say my  
12 opinion because I don't feel like I'm an expert, but my  
13 understanding of it.

14 THE COURT: Yes.

15 MS. PETERSON: My understanding of conjunctive use  
16 management is that you have a limited resource and you would  
17 try to maximize the use of that surface and groundwater  
18 resource. And if one of the objectives is to protect senior  
19 rights, that could be one of the objectives of the  
20 conjunctive-use management, a conjunctive use management plan  
21 or whatever.

22 So, and I -- the one example I can use because I  
23 think the information is in the record but it's only with  
24 regard to one water right holder, but to try to explain how  
25 this might happen, and I'm not as familiar with the hydrology

1 and everything down here in the Muddy River area. I'm more  
2 familiar with everything up north. But Vidler owns, you know,  
3 groundwater rights in Kane Springs, and Vidler owns surface  
4 water rights in the Muddy Valley Irrigation Company.

5 And so they're one owner that owns groundwater and  
6 surface water, but they could use their water rights more  
7 efficiently to maximize the use of the surface and the  
8 groundwater rights by maybe, for example, if they needed to  
9 pump their groundwater they wouldn't pump -- they wouldn't take  
10 their surface water maybe one year because they wanted to pump  
11 more of their groundwater based on hydraulic conditions or  
12 something. Maybe another year they would want to use more of  
13 their surface water and not pump as much of their groundwater.  
14 And that's how they would conjunctively manage the water  
15 resources.

16 Utilities do it that have, like, surface water rights  
17 and groundwater rights. They conjunctively manage their  
18 resources so that -- up north, this is how it happens up north.  
19 And I'm not trying to get any objections, but, for example --

20 MR. TAGGART: Well, I will if you --

21 MS. PETERSON: Okay. I'll move on. I'll move on.  
22 I'll move on.

23 MR. TAGGART: No, I don't disagree. I didn't mean to  
24 stop you. I'm sorry.

25 MS. PETERSON: Yeah, I'll move on. But I don't

1 equate --

2 THE COURT: So it's really a much more nuanced,  
3 closely connected -- what's the word that I'm looking for --  
4 calculation that you're making when you're conjunctively  
5 managing the surface water and the groundwater together. It's  
6 not just looking at the conflict of the rights between the  
7 surface water and the groundwater, it's really like a  
8 management plan between the two and how to maximize whatever  
9 your objective is?

10 MS. PETERSON: It does use the word management right  
11 in there.

12 THE COURT: Yes.

13 MS. PETERSON: So, yeah. And again, I think the  
14 examples that you were giving, the way I understood them with  
15 the others was that that was more of a conflicts analysis.

16 THE COURT: I see.

17 MS. PETERSON: And I'll tell you, and I've got it in  
18 here because I was going to comment on it, but all the  
19 slides -- there was a slide, and I can't remember the number of  
20 it. I'll get to it in my notes here, that the SNWA attorney  
21 had. And those cases weren't about conjunctive management.  
22 They were about surface water and groundwater rights that  
23 were --

24 THE COURT: At conflict with each other. I see.

25 MS. PETERSON: -- in conflict with each other.

1 THE COURT: Okay.

2 MS. PETERSON: The cases don't mention conjunctive  
3 use management at all.

4 THE COURT: Okay.

5 MS. PETERSON: So I will -- oh, and I guess could you  
6 bring up the slide. I guess just another thing just to point  
7 out some of the evidence in the record.

8 THE COURT: And what number slide is this?

9 MS. PETERSON: It's Slide 8.

10 So this is the slide we put up the other day, and  
11 it's the -- on the left is a narrative from the SNWA report and  
12 it was after the 1169 pump test that says there's a lack of  
13 pumping responses from the 1169 pumping north of the Kane  
14 Springs fault and west of the MX-5 and CSI wells. And this  
15 again is information that could be used for purposes of  
16 management of a basin to maybe allow pumping in a certain  
17 portion of a basin where there wasn't as much connectivity.  
18 And so maybe you can put water --

19 THE COURT: Oh, I see.

20 MS. PETERSON: -- because it's saying there's a lack  
21 of pumping responses. So, again, maybe this is an area where  
22 there could be pumping in the Lower White River Flow System or  
23 in this basin in particular and it's not going to have --

24 THE COURT: So the point is that just because a  
25 basin -- part of the basin has connectivity with other basins

1 doesn't mean that the entire basin is connected.

2 MS. PETERSON: Right. Okay. I'm going to get on to  
3 Mr. Dotson, and he had an example yesterday about wasn't it a  
4 lot of water, 6 inches over 1,100 square miles. And we did the  
5 math on that. And the quantity of water that he's talking  
6 about, 6 inches over 1,100 square miles, there's 640 acres in  
7 1 square mile. And then 640 acres times 1,100 equals  
8 704 acres. And then an acre foot of water -- oh, 704,000.

9 Thank you.

10 An acre foot of water is 1 foot of water in an acre.  
11 We're only talking about 6 inches here. So we're going to cut  
12 the 704,000 acres in half to 352-. And the evidence and the  
13 testimony -- or the evidence or the argument that you heard was  
14 that there was an average over the two years of 14,500 acre  
15 feet pumped per year, so during the two year pump test we're  
16 talking about 29,000 acre feet being pumped.

17 But under Mr. Dotson's scenario, even though there  
18 were only 29,000 acre feet pumped during the pump test, there  
19 was 352,000 acre feet of water in that 6 inches over the  
20 1,100 square miles. And so, you know, that's over 10 times  
21 more water that was pumped, he's contending in his scenario,  
22 was in that 6 inches over the 1,100 square miles.

23 THE COURT: Okay. You totally lost me on the math.

24 MS. PETERSON: Okay. Trying to show --

25 THE COURT: So, you know what, if you give me -- have

1 you figured out what the 6 inches over 1,100 square miles is in  
2 acre feet?

3 MS. PETERSON: Yes.

4 THE COURT: And is that number 352 --

5 MS. PETERSON: 352.

6 MR. TAGGART: I'm just going to object.

7 THE COURT: 352 or 352,000?

8 MS. PETERSON: Thousand.

9 MR. DOTSON: I'm going to object that it's an  
10 improper hypothetical because it assumes a vacuous space during  
11 that entire area because you're not counting the mass of the  
12 earth.

13 THE COURT: Oh, boy. Okay.

14 MR. DOTSON: It calls for math.

15 THE COURT: No, no, no, no, I'm just saying -- I'm  
16 just saying my brain is hurting from the math, and I'm not a  
17 mathematician. So I'm just --

18 MR. DOTSON: In other words, there's not a hole.  
19 It's not a hole of water. And it also misstates my argument.  
20 So those are my two objections.

21 MR. TAGGART: Your Honor, I'm just going to object  
22 that I just think -- getting another math question into the  
23 record. I think the point is getting made. Clearly she  
24 disagrees with what Mr. Dotson said, but putting another value  
25 into the record that the State Engineer didn't calculate is not

1 a good idea.

2 MS. PETERSON: It's argument. This is argument, and  
3 I'm responding to the argument of Mr. Dotson that 6 inches over  
4 1,100 square miles is a lot of water. And, yeah, if you're  
5 saying that after the result of that pump test there were  
6 drawdowns in the Lower White River Flow System, 1,100 square  
7 miles that totaled 6 inches, at least, you're talking about  
8 352,000 acre feet of water when only 29,000 was pumped. That's  
9 the point of that.

10 You also heard during the argument with regard to  
11 Phase 2 of Order 1309, if a Phase 2 occurs that, you know, we  
12 don't -- number one, we don't know when that might be. We  
13 don't know what might happen during that phase. And it's clear  
14 we don't know what to expect in Phase 2.

15 And I think we heard Mr. Bolotin say that we don't  
16 know what the State Engineer is going to -- he may not want to  
17 curtail by priority. He said there's nothing explicit in the  
18 statute how to manage or how to reprioritize. He also  
19 indicated that -- priorities in sub-basins. He's not sure what  
20 to do with those, whether that stays. It's all unknown.

21 Mr. Taggart indicated we don't know how to divide the  
22 8,000. We don't know how it will be done. This is the first  
23 part of a curtailment. A curtailment is the next step.

24 And again, just throwing into the whole -- and  
25 building on, I guess, the whole -- the argument that

1 Mr. Foletta made about all the chaos that has been thrown into  
2 this proceeding, and I will tell you, I know they didn't like  
3 the fact that I talked about the decree and how you have to  
4 give notice to everybody.

5           But if there is a curtailment in seven basins they  
6 will have to give notice to every water right holder in those  
7 basins because there is a Nevada case right on point, *Eureka*  
8 *County v. District Court*, where the Nevada Supreme Court  
9 specifically held that prior to curtailment proceedings you  
10 have to notify every single water right holder, groundwater  
11 right holder in the basin. So they will have to notify  
12 everybody in the seven basins that hold water rights.

13           And then just kind of briefly addressing some of the  
14 other arguments that were made, I heard Mr. Morrison for Moapa  
15 Valley Water District say that the State Engineer found Kane  
16 Springs water ends up in Muddy Springs, and that is nowhere  
17 found in Order 1309, not at all.

18           I also -- with regard to some of Mr. Taggart's  
19 argument, he indicated that NRS 532.120 was the authority to  
20 include Kane, and that statute states that the State Engineer  
21 may make such rules and regulations as may be necessary for the  
22 proper and orderly execution of the powers conferred by law,  
23 and obviously that has nothing to do with designating a basin  
24 and Order 1309 was certainly not rules and regulations.

25           In the afternoon Mr. Taggart presented -- it was

1 page 41 of the slides and he cited to ROA 41982. He had five  
2 hydrographs that he said were all very familiar. Recovery did  
3 not occur with those hydrographs. And again, that's -- a  
4 hydrograph is just one -- it's the well location. It doesn't  
5 necessarily mean that that's what's happening, you know, in the  
6 ground all around the well. We don't know. We just know  
7 what's happening in that well and that the water levels had not  
8 come back to pretest levels.

9           And it's not the same hydrographs that you saw that  
10 the State Engineer put up. These hydrographs that he was  
11 describing, the five hydrographs, they only had to do -- they  
12 didn't have anything to do with Kane, the Kane wells or the  
13 CSVM-4 well, which is in northern Coyote Springs. Those  
14 hydrographs were in lower Coyote Spring Valley, the Muddy River  
15 Springs Area, California Wash, Garnet Valley and Black  
16 Mountains. They didn't have anything to do with, again,  
17 northern Coyote Springs or Kane.

18           There was also argument that the application  
19 procedures in NRS 533 and 534 indicated -- were indicative of  
20 conjunctive management because they both used the NRS 533  
21 statute. And the Legislature said that you can use that same  
22 procedure to apply, whether it was surface water or  
23 groundwater; therefore, that was indicative of conjunctive  
24 management. And I guess my response to that would be why would  
25 you need the -- if that was true, why would you need the

1 conjunctive management legislative policy enacted in 2017 if  
2 the application statute was indicative of conjunctive  
3 management?

4           And then Slide 58 was the slide that had all the  
5 cases with the authority for conjunctive management. And  
6 again, none of those cases described or discussed conjunctive  
7 management. Those words were not used in those cases. But  
8 those cases had to do with impacts between surface water right  
9 holders and groundwater right holders.

10           And the *Cappaert* decision in particular involved the  
11 State Engineer not recognizing a reserved right of the Federal  
12 Government claim that the national monument that had the  
13 pupfish, and the State Engineer allowed a nearby groundwater  
14 right holder that was junior to the federal reserved right to  
15 pump and lowered the Devil's Hole, which was the habitat for  
16 the pupfish. And the U.S. Supreme Court said that the federal  
17 reserve right had to be recognized. So that was -- again, it  
18 was an impacts case.

19           THE COURT: Impact on conflict of rights.

20           MS. PETERSON: Yes.

21           THE COURT: Okay.

22           MS. PETERSON: And then the Center for Bio Diversity  
23 indicated that proving liability or argued that proving  
24 liability for a take, that that was in federal court and that  
25 was a standard there for federal cases. But it was different

1 from proving potential for a take. And I just did want to  
2 indicate that the State Engineer indicated that he was  
3 worried -- in his ROA at 47 that he definitely indicted that he  
4 was worried about the liability for the State and that's what  
5 he was talking about, not that there is some kind of different  
6 standard for proving potential for a take.

7           The attorney then for Center for Bio Diversity also  
8 indicated that the 60-foot higher water level elevations -- he  
9 was kind of attacking those and that the water levels really  
10 weren't 60 that the State Engineer was describing. And I guess  
11 I would just indicate that the State Engineer made that  
12 determination. He made that determination in Ruling 5712 and  
13 he made it also in Order 1309.

14           And, you know, it is improper to ask the Court to  
15 reweigh the factual determination that was made by the State  
16 Engineer on that issue. And I don't even believe the Center  
17 even appealed that issue, so I'm not asking you to substitute  
18 or reweigh the evidence on that issue.

19           I would also, Your Honor, when you're -- if you're  
20 using the demonstrative evidence or the slides here when you're  
21 reviewing everything and making your decision, I would ask that  
22 you look at some of them very carefully because in some  
23 instances there were words that were, you know, taken out and  
24 put the dot, dot, dot that are pretty important for the  
25 statutes.

1           And I know you noticed them before when you were  
2 reading the statute, but there was one on the slides yesterday  
3 and it was a Southern Nevada Water Authority slide, NRS  
4 534.120, subsection 1. The words that were taken out were "as  
5 provided for in this chapter." So what you saw on the slide or  
6 what somebody saw on the slide was, "Within an area that has  
7 been designated by the State Engineer." The words "as provided  
8 for in this chapter" were taken out and then it goes on as if  
9 to read, "where, in the judgment of the State Engineer the  
10 groundwater basin is being depleted." So we would ask you to  
11 just look at those carefully.

12           And then moving on to Mr. Dotson today, the argument  
13 that he made today --

14           MR. DOTSON: Your Honor, objection. She can't  
15 respond to something I said today unless it's just framing a  
16 question. This was the point that counsel made, which is why  
17 we did it in the order that we did.

18           THE COURT: Right. No, no, I understand your point.

19           I guess it just really depends on what it is that you  
20 are addressing.

21           MS. PETERSON: There was a dialogue today with the  
22 Court regarding the scope of judicial review versus the decree  
23 court. And I understood the Court to ask Mr. Dotson the  
24 question that his petition for judicial review was with the  
25 issue of procedural due process in Order 1309, as opposed to a

1 determination from the decree court on anything in the decree  
2 under -- in this proceeding.

3 THE COURT: So, no, I think what I was -- so what I  
4 was asking is when he was talking about, you know, invoking the  
5 powers of the decree that he was asking the Court to do, that  
6 was as it related specifically to the conflicts analysis that  
7 was done in 1309 regarding the Muddy River Decree.

8 MS. PETERSON: Okay.

9 THE COURT: So I guess -- I know that there was --  
10 let me think about this -- that in your intervening brief that  
11 you had addressed issues regarding how they had calculated the  
12 Muddy River Degree water. Is that what you were going to or  
13 was that something different?

14 MS. PETERSON: I definitely was going to address  
15 that, but I was going to go to the remand instruction that you  
16 saw on the slide today.

17 THE COURT: As it relates to Vidler?

18 MS. PETERSON: As it relates to the relief that  
19 Mr. Dotson asked for.

20 THE COURT: Regarding enforcing the decree?

21 MS. PETERSON: Yes. Well, and also the one about  
22 even though they're appealing the part of the order that deals  
23 with the State Engineer's statement about what the  
24 predevelopment flows of the Muddy River were, the 33,900 --

25 THE COURT: Uh-huh.

1 MS. PETERSON: -- he wants you to affirm that.

2 THE COURT: So I think you covered that pretty well  
3 in your intervening answering brief.

4 MS. PETERSON: Okay.

5 THE COURT: So I think -- I don't think I need  
6 further argument on that --

7 MS. PETERSON: Okay.

8 THE COURT: -- if that gives you some assurance.

9 MS. PETERSON: Okay.

10 THE COURT: I think that's what caused me to ask  
11 those questions about the calculations as it relates to, you  
12 know, translating historical volume and then, you know, because  
13 it looks like there are different opinions, I guess I should  
14 say, from the different entities as to how much that volume  
15 actually is.

16 MS. PETERSON: And I guess my last argument with  
17 regard to the Muddy River would be that there was no notice to  
18 the parties. And I guess I'm kind of following up on  
19 Mr. Foletta's argument about the Endangered Species Act. There  
20 was no notice to the parties in this case that we were to  
21 address what the predevelopment flows of the Muddy River were  
22 and provide evidence on that, so I'll leave it at that.

23 THE COURT: Okay.

24 MS. PETERSON: And then with regard to the six  
25 criteria, I know there were questions from the Court a few days

1 ago about whether -- if we had known the six criteria if our  
2 presentations would have been any different, and of course we  
3 did raise the due process argument in our petition for judicial  
4 review.

5           And I can assure you, absolutely, that if we had  
6 known what the six criteria were before we went into the  
7 hearing, that we would have performed work that would have  
8 provided information with regard to geologic structures and/or  
9 mapping. I mean, we would have drilled bore holes near our  
10 wells to show what the geology was there so that we could have  
11 complied with Criteria 5 and/or Criteria 6. And it would have  
12 made a difference in the case that we would have presented and  
13 what we would have presented and how we would have presented  
14 it, so our due process rights were violated.

15           And I also wanted to touch upon the best -- you know,  
16 the best available science and all that's been raised. And I'm  
17 not asking you to reweigh any evidence here, but I am going to  
18 let you know, Your Honor, that in response to Order 1303,  
19 Lincoln and Vidler did provide what they considered, their  
20 experts considered to be the best available science to the  
21 State Engineer. They provided some geophysics. I'm not asking  
22 you to reweigh it. I'm just telling you it's in the record.  
23 They provided geophysics. They provided geochemistry data that  
24 they believe showed that the Kane Springs water, what didn't  
25 end up in the Muddy River springs --

1 THE COURT: Oh, this is like the duadanem (sic) or  
2 whatever it's called.

3 MS. PETERSON: Yeah, the deuterium --

4 THE COURT: Yeah, the deuterium.

5 MS. PETERSON: -- and the chemical signature. And  
6 they also provided --

7 MR. BOLOTIN: Your Honor.

8 THE COURT: Yes?

9 MR. BOLOTIN: I just got a message from my colleague  
10 that's on BlueJeans. He said he wasn't able to get back into  
11 the BlueJeans just now and I just wanted to make sure that --

12 THE COURT: Oh, okay. Hang on. Stop the clock.  
13 Let's check on that.

14 MR. BOLOTIN: It might be a personal issue, but I  
15 just wanted -- I didn't want all those people to miss  
16 anything --

17 THE COURT: Oh, sure.

18 MR. BOLOTIN: -- if it was that, but I'll tell him it  
19 might be his problem.

20 THE COURT: Yeah. See if he can try it again. Okay.  
21 All right, start the clock.

22 MS. PETERSON: So we did try to present what we  
23 thought was the best available science. And with due respect,  
24 I want to state on the record our frustration with trying to  
25 provide that, not having any guidance in advance as to what the

1 State Engineer wanted to see. Obviously if we would have known  
2 what he wanted to see, we would have tried to provide that to  
3 him.

4 But there's been this suggestion, for example, that  
5 maybe there should be -- the State Engineer would welcome a  
6 pump test from the Kane Springs well at this point. And  
7 obviously, you know, we don't even know if we have any water  
8 rights. So why would we go out and spend all the money, which  
9 would be a lot, because there's no power at that site? There's  
10 no -- again, that's one of the things we complained about in  
11 our petition.

12 The State Engineer is telling us that there can be  
13 additional hydrologic study or there has to be additional  
14 hydrologic study in Kane Springs to know what the hydrologic  
15 connection is. And why we would do a pump test when we don't  
16 even know what the State Engineer would want to see? What we  
17 would have to try to show by that pump test again just reveals  
18 that we're in this mega mess where we don't even know if we can  
19 get out or how we can out.

20 And it's very frustrating because we have to litigate  
21 the issue instead of trying to be involved in finding the  
22 solution or working with other parties. It's very frustrating.  
23 And our clients, you know, they're frustrated that they're  
24 losing their property rights, and it just has created a lot of  
25 problems. I'll just leave it at that.

1           There were some other slides that I just wanted to  
2 highlight.

3           Slide 7. So, Your Honor, there was a question the  
4 other day that you had about what the headwaters were.

5           THE COURT: As related to the tributaries?

6           MS. PETERSON: Headwaters related to the springs.

7           THE COURT: Oh, the springs.

8           MS. PETERSON: And so on Record on Appeal 7, the  
9 State Engineer indicates Pederson Springs. It's in the middle  
10 there. And actually the sharp declines with the pumping from  
11 Coyote Springs. This is one of the sites. The other site on  
12 page 60 just references the pumping from Coyote Spring Valley  
13 of 5,290 acre feet that caused -- he used the same language --  
14 sharp decline, I think, was -- yeah, in groundwater levels and  
15 flows. But the Pederson Springs there are noted as headwater  
16 springs and then also the Baldwin and the Jones Springs.

17           And so we also provided a map, and there's a cite to  
18 the record on that, 41959, that shows the springs in that area.  
19 So you had asked just about the headwaters. And so those are  
20 the headwater springs --

21           THE COURT: Okay.

22           MS. PETERSON: -- referenced in the decree.

23           THE COURT: Okay.

24           MS. PETERSON: And then the next slide.

25           Okay. Slide 9, there were some comments about this

1 slide. And the access on the left is the KMW monitor well and  
2 water levels and then the access on the right is the CSVN-4  
3 scale with regard to water levels. And you'll see on the slide  
4 that the KMW data is in blue and the CSVN-4 data is in red.  
5 And so the scales are different.

6           The reason that they're different is that the monitor  
7 well, the KMW monitor well showed 26 feet of drawdown. And  
8 because we wanted to show the responses for both wells on this  
9 one graph, we plotted again the CSVN-4 data on the right-hand  
10 side. And the scale needs to be larger because the CSVN-4 data  
11 shows that there was approximately a 1 and a half foot change.  
12 And so on the one hand we have a 26-foot change and a one and a  
13 half foot change, and so that's why the data is plotted like  
14 that. Because if we had plotted the CSVN-4 data on the same  
15 scale as the KMW-1, basically the red would be a flat line and  
16 you wouldn't be able to see the data points. And so the red  
17 blocks are the data points.

18           And I know there was some criticism of that and the  
19 data points there, but it is data from -- it's a Southern  
20 Nevada Water Authority well. And if you don't like the lines,  
21 you can just look at the red squares. You can just ignore the  
22 lines and you can look at the red squares and you can see what  
23 the data points were.

24           And then the other thing I wanted to mention about  
25 this is that this well recovered on April 26, 2007, the water

1 level. And this is in the record. It's in the record at page  
2 1585. The water levels in the KMW monitor well had recovered  
3 to 1,879.9 feet, which is where they were -- actually a little  
4 bit above where they started.

5           And I guess I'm just bringing this to your attention  
6 because in those hydrographs that were talked about they were  
7 indicating how other wells in the Lower White River Flow  
8 System, in the lower part of the Lower White River Flow System  
9 had not recovered yet to date. And our well recovered, you  
10 know, one year after the well had been pumped, the production  
11 well had been pumped.

12           And then moving on to the next slide, which is  
13 Slide 10, and there was some discussion about this slide, that  
14 the data -- and we're talking about the text that's on the  
15 left-hand side and it talks about the problem with the  
16 transducer and the failure. And there was some information  
17 that there had been hand measurements.

18           And I guess what I want to say about that is that we  
19 were not around in this mega-mess when these reports were  
20 prepared because we weren't involved in 1169 at all. And so  
21 we're reading the report and we're taking this at face value  
22 put out by SNWA that you can't rely on this data because of  
23 this failure. So it doesn't say in here that there were hand  
24 measurements and so it's okay to rely on this data. It doesn't  
25 say anything like that. It just says you can't rely on the

1 data. So that's what everybody was put on notice with regard  
2 to their report.

3 And then the next slide would be 11. And this was --  
4 I put in the full redirect examination on this question with  
5 regard to the U.S. Fish and Wildlife witness that answered the  
6 question about take. And he's being asked questions by his  
7 attorney, which is Mr. Miller. And he wants to ask  
8 questions -- my interpretation of it is is to clarify the  
9 record. And he does, he specifically asked the three  
10 witnesses, they had three on their panel, None of you are  
11 proffered to give testimony and discuss ESA compliance issues?  
12 And they say they're not.

13 Mr. Mayer, he's a hydrologist, he said he wasn't.

14 Ms. Braumiller, she was a hydrologist, she said she  
15 wasn't.

16 Then Dr. Schwemm says he's going to answer it, and he  
17 does answer it. His counsel asks him, and he answers it. And  
18 he's trying to clarify this thought or inference that had been  
19 placed in the record by the Center for Biological Diversity.

20 And nobody objected to that. There's no objection to  
21 that testimony by that witness and that opinion by that  
22 witness. So I would give full weight to that testimony from  
23 that witness.

24 Okay. And, Your Honor, these next three slides,  
25 which are Numbers 12, 13 and 14, and the reference on the

1 record is there, but this is the same chart but it's the full  
2 chart that Mr Robison presented to you yesterday. And again,  
3 it starts out at the top on the first page. This is the State  
4 Engineer's exhibit. The first page indicates all the water  
5 rights in priority. And we get to -- if we go to the next  
6 page.

7 THE COURT: You know, I didn't even look. Does it  
8 actually indicate which are surface and which are groundwater  
9 rights?

10 MS. PETERSON: They're all groundwater.

11 THE COURT: Oh, they're all groundwater.

12 MS. PETERSON: Yes.

13 THE COURT: Oh, you know, I saw that. Okay.

14 MS. PETERSON: Okay. And then when we get to the  
15 second page there's the -- I don't know if we put that there or  
16 if that was there in the original one, but there is a  
17 cumulative total running there of the duty.

18 THE COURT: Yes.

19 MS. PETERSON: So you can see where the 8,000 cutoff  
20 line is. And you can also see the priority dates of all the  
21 water rights. So I think Coyote Springs might have been on  
22 this page so they showed these two pages. But then if we go to  
23 the next page, we go to where Lincoln and Vidler's water rights  
24 would be in the basin. And they're not on here. I'm not sure  
25 why they're not on here, but maybe this was before we were

1 thrown into the basin.

2 THE COURT: Oh.

3 MS. PETERSON: But our priority rights are February  
4 14th, 2005, so they would be right above the Muddy River, that  
5 permit. Is it 775161?

6 THE COURT: So right above the Muddy River Springs  
7 Area.

8 MS. PETERSON: Springs Area. Yes, that area --

9 THE COURT: Nevada Power Company?

10 MS. PETERSON: Yes. That area that's highlighted.  
11 So you can see in the cumulative total, you know, we're like at  
12 the 38,000, 39,000 of an 8,000 cap.

13 MR. TAGGART: Your Honor, if I can just object to  
14 clarify the record. This is -- earlier stated, this is where  
15 we stand. This particular document was --

16 THE COURT: Was one that was stricken or rescinded  
17 from 1303. Is that the one?

18 MR. TAGGART: Well, first it was attached to a Draft  
19 1303 --

20 THE COURT: Right.

21 MR. TAGGART: -- and it was not part of 1303. So I  
22 hope counsel agrees so we can clarify the record that this  
23 table that we're looking at was part of a Draft 1303. It was  
24 not part of Order 1303 and it was not part of Order 1309. I  
25 think it's really important that the Court be aware --

1 THE COURT: Sure.

2 MR. TAGGART: -- of that record.

3 MS. PETERSON: But it was an exhibit in the 1309  
4 proceedings. It was a State Engineer exhibit in the 1309  
5 proceedings.

6 MR. TAGGART: No. The State Engineer put Draft 1303  
7 into his exhibits. And because he put his Draft 1303 in his  
8 exhibits, the attachment to Draft 1303 was also in his  
9 exhibits.

10 THE COURT: So it's in the record on appeal?

11 MR. TAGGART: Yes, it is.

12 THE COURT: And you're just clarifying for the record  
13 what it is, which is that it was part of the draft. It didn't  
14 make it to 1303 itself. And then 1309 basically rescinded  
15 anything else that wasn't included in 1309 from 1303.

16 MR. TAGGART: That's right.

17 THE COURT: Okay.

18 MR. TAGGART: I mean, does it depict what the State  
19 Engineer said in the draft of 1303? Absolutely.

20 THE COURT: Sure.

21 MR. TAGGART: I don't disagree. I think it's --

22 THE COURT: Well, and I think it may be -- it's being  
23 used more illustratively to make a point regarding where  
24 everyone's respective rights would be now that they're thrown  
25 into a seven basin mega-basin.

1 MR. TAGGART: Well, if they are thrown in --

2 THE COURT: If that's true.

3 MR. TAGGART: -- and if it were done with one  
4 priority schedule --

5 THE COURT: Sure.

6 MR. TAGGART: -- this is what it would look like.

7 THE COURT: Sure.

8 MS. PETERSON: Any knowledge that the information is  
9 not correct in that exhibit?

10 MR. TAGGART: I didn't say it was. I think -- I'm  
11 just trying to clarify for the Court so the Court is not  
12 confused about what this document is.

13 THE COURT: No, no, no. I understand what the  
14 document means.

15 MR. TAGGART: Okay.

16 MS. PETERSON: And if we could go back to the first  
17 page.

18 MR. HERREMA: Your Honor, Brad Herrema on behalf of  
19 CSI. We showed this. I think we were the first ones to bring  
20 it into the proceeding. I don't think there's any dispute from  
21 Mr. Taggart it was prepared by the State Engineer. It's  
22 accurate as to what it says at the top of the first page,  
23 regardless of what it was associated with previously. It was  
24 prepared by the State Engineer. It's accurate to show  
25 groundwater rights by priority in the Lower White River Flow

1 System at the time it was prepared.

2 THE COURT: Thank you. And I think Mr. Taggart's  
3 point is at this point you don't know exactly how these  
4 priorities are going to be looked at, considered or anything  
5 like that because that's not part of the conflicts portion. Is  
6 that right?

7 MR. TAGGART: Well, yes. And I think -- yes. I  
8 mean, this is part of what we said is Phase 2.

9 THE COURT: I understand your position.

10 MR. TAGGART: Right.

11 THE COURT: So I understand everyone's respective  
12 positions as to that, but you can continue. I think that  
13 you're illustrating your point as far as the uncertainty that  
14 you are put in with the possibility, I guess, that this could  
15 happen.

16 MS. PETERSON: Correct. And on that note, we hope it  
17 doesn't happen. We hope the Court vacates Order 1309, finding  
18 that the State Engineer had no statutory authority to issue  
19 Order 1309 with regard to, you know, putting all these basins  
20 into one mega-basin and I guess in the future somehow requiring  
21 conjunctive management. Again, we don't think the State  
22 Engineer has statutory authority for that. We hope the case  
23 ends there and that's the only determination that the Court has  
24 to make. But obviously we also would want the Court, if for  
25 some reason that doesn't happen, to rule on all our other

1 requests for relief with regard to vacating the ruling because  
2 of a violation of our due process rights with regard to the six  
3 criteria and all the other due process violations that we've  
4 made and the substantial evidence arguments that we've made.

5 THE COURT: Okay.

6 MS. PETERSON: And thank you very much. Appreciate  
7 your time.

8 THE COURT: Thank you. Thank you. So I think that  
9 concludes our hearing. I'm sure we have housekeeping matters.

10 MR. BOLOTIN: Your Honor, this is James Bolotin for  
11 the State Engineer.

12 THE COURT: Yes.

13 MR. BOLOTIN: And since my argument was two days ago  
14 and it's been another --

15 THE MARSHAL: You're not close to a microphone.

16 THE COURT: Oh, yeah, come close to the mic.

17 MR. BOLOTIN: Since our argument was two days ago and  
18 it's been a long two days, I also wanted to say that on behalf  
19 of the State Engineer and the Attorney General's Office we  
20 really appreciate your time and focus and devotion to getting  
21 through all of this and sticking through it with us those four  
22 days. Thank you, Your Honor.

23 THE COURT: All right. Okay, so I feel like I have  
24 enough, but I know that there was a mention of --

25 UNIDENTIFIED SPEAKER: My fault.

1 THE COURT: So whose hearing were you seeing it at?  
2 Which I have never seen. I don't even know it's a thing. But  
3 I'll certainly let the parties let me know their positions on  
4 that.

5 MR. HERREMA: Your Honor, just a housekeeping issue.

6 THE COURT: Sure.

7 MR. HERREMA: Brad Herrema again on behalf of CSI.  
8 All of the demonstratives, those are considered admitted? Do  
9 we do anything further on those? Admitted as demonstratives,  
10 obviously.

11 THE COURT: Yeah. They're the Court's exhibits that  
12 will be made part of the record.

13 MR. HERREMA: Okay, great.

14 THE CLERK: But not the big boards, though.

15 THE COURT: Not the big boards, but I think that we  
16 have the smaller copies of those. Right? Yeah, but we have  
17 the smaller copies of those. Okay. So I see a lot of people  
18 standing up. Why don't I just go from Mr. Bolotin this way and  
19 then we can go through everyone. Okay.

20 MR. BOLOTIN: Your Honor, just based on what you just  
21 said, sometimes in these water cases there's specific issues  
22 that the judge does want post-hearing briefing on, but if there  
23 isn't, the State Engineer has no desire or request for  
24 post-hearing briefing specifically on anything.

25 MR. TAGGART: And I guess I'm next in line.

1 THE COURT: You're next.

2 MR. TAGGART: Okay. I tend to agree. If the Court  
3 has -- I mean, we've gone through things pretty exhaustively  
4 and the briefs are pretty good. I mean, if something new came  
5 up during the hearing or you go back in chambers and you  
6 realize there is an issue that you think you'd like the parties  
7 to brief more, we've seen that happen. But I think because  
8 we -- and we also did the findings of fact and conclusions of  
9 law.

10 THE COURT: Right.

11 MR. TAGGART: So I think nothing is jumping out at me  
12 as a need to do that, but -- because usually we'll then wait  
13 for the transcripts and then we'll summarize the evidence.

14 THE COURT: Oh, yeah.

15 MR. TAGGART: I just -- we've done enough of all of  
16 that.

17 THE COURT: I mean, you all have done so much work  
18 already. I will ask this. Are there any specific case that  
19 speak to conjunctive management as conjunctive management and  
20 not as a conflict of laws issue?

21 MR. TAGGART: Well, I think that presumes --

22 THE COURT: Or one that's closest to that.

23 MR. TAGGART: Yeah. I think that presumes what  
24 conjunctive management means. And I think there's valid,  
25 multiple --

1 THE COURT: Interpretations of what that actually  
2 means?

3 MR. TAGGART: Yeah, obviously from here today.

4 THE COURT: Okay.

5 MR. TAGGART: So, I mean, I gave you the list I have.  
6 I think Ms. Peterson made her points about that. They're fair  
7 points, so I'm not sure I could add to that much.

8 THE COURT: Okay. All right. I also still -- okay.  
9 Yes?

10 MR. BOLOTIN: The only thing I'd add on that, Your  
11 Honor, not to get into a conflicts of law -- and this is James  
12 Bolotin, for the record. There are persuasive authorities from  
13 other states that probably use the term conjunctive management,  
14 but --

15 THE COURT: Yeah.

16 MR. BOLOTIN: Yeah.

17 THE COURT: I'll just stick to Nevada. It's probably  
18 a lot safer that way. Okay. Mr. Dotson, was there something  
19 you wanted?

20 MR. DOTSON: No, I was just going to put -- I thought  
21 you were going to ask everybody to put on the record. I have  
22 no need for any post-trial briefing, unless you -- but I would  
23 say if in the Court's exercise of your review of the record it  
24 comes to light that you would care to see any issue, please do  
25 not hesitate to ask. And I'm sure I speak with everyone in the

1 room when it comes to that. But I am not asking for any  
2 post-trial opportunity.

3 THE COURT: Yeah. Okay, Mr. Lake.

4 MR. LAKE: I take the same position on briefing as  
5 Mr. Dotson. I don't see a need for it from our perspective.  
6 I'd also like to ask, I know we've all been here for a long  
7 time and I understand that, I would like to ask for one more  
8 brief recess before we adjourn today. I need to confer with my  
9 client one more time.

10 THE COURT: Okay. So I guess we'll just rest at  
11 ease. How brief do you need?

12 MR. LAKE: Five minutes or less would be fine.

13 THE COURT: Okay. I mean, why don't everyone just  
14 stick around here until 3:30. Let me just ask Mr. Flaherty, is  
15 there anything else that you wanted to add?

16 MR. FLAHERTY: Regarding briefing, Your Honor?

17 THE COURT: Yeah.

18 MR. FLAHERTY: On behalf of Nevada Cogen I was going  
19 to say no mas, por favor.

20 THE COURT: Yeah. Okay.

21 MR. FLAHERTY: Thank you.

22 THE COURT: All right. Mr. Balducci, I assume that  
23 same thing.

24 MR. BALDUCCI: Please, no more.

25 THE COURT: Okay. Well, you know, I will tell you

1 there is a lot for me to think about, re-review, make sure.  
2 And I have to thank everyone for their excellent arguments. It  
3 has been extremely helpful to me as someone who has never  
4 practiced water law or done anything even remotely close to  
5 water law to be really able to understand how everything fits  
6 together and what something I think it means isn't really  
7 actually what it means until, you know, when you really kind of  
8 solidified it for me in your arguments. That really helped me  
9 follow the briefings a little bit better.

10 So I think that's why now that I have all this  
11 information I'm going to reread the briefings again just to  
12 make sure in preparing the order. You know what, let me just  
13 make sure I have everyone's proposed findings of fact and  
14 conclusions of law. So hang on. I'm just going to go get my  
15 binder, and I'm going to read off the ones that I have.

16 (Pause in the proceedings.)

17 THE COURT: So let me just read off the ones that I  
18 have and make sure I'm not missing anyone. I've got Las Vegas  
19 Valley Water District, Center for Biological Diversity, Lincoln  
20 County, Vidler, Coyote Springs, NVEnergy, Apex Holding, Nevada  
21 Cogen, Church of Jesus Christ of Latter-Day Saints, Nevada  
22 State Engineer, Muddy Valley Irrigation Company. And I think  
23 there was Georgia-Pacific that I received just like recently.  
24 Is that right, Mr Foletta?

25 MR. FOLETTA: Yeah, you should have it.

1 THE COURT: Okay.

2 MR. FOLETTA: At the -- I think it was the first day  
3 of the hearing.

4 THE COURT: Yeah. Is there anyone who thought they  
5 had put forward proposed findings of fact and didn't hear their  
6 entity called? No. Okay.

7 MR. BOLOTIN: Your Honor, just to double -- just to  
8 triple check, you said State. You said you got the State  
9 Engineer's?

10 THE COURT: Yep, I did get the State Engineer. Yep.  
11 And then, Mr. Lake, was there anything else? Were you able to  
12 confer with your client?

13 MR. LAKE: One second, Your Honor.

14 THE COURT: Okay, sure.

15 MR. LAKE: Your Honor.

16 THE COURT: Yes?

17 MR. LAKE: I'll wait for everybody to get settled. I  
18 have one more thing just to add. So the Center for Biological  
19 Diversity and the State Engineer have reached -- I'm going to  
20 stop short of calling it an agreement in principle, but an  
21 agreement in concept in which we would dismiss our PJR, subject  
22 to certain terms. The specifics of the terms are still under  
23 negotiation.

24 THE COURT: You're still in the negotiating stage?

25 MR. LAKE: Uh-huh. But just to make the Court aware.

1 And we would be maintaining our intervenor status in the  
2 remaining appeals as well.

3 MR. BOLOTIN: And, Your Honor, I would just echo that  
4 it would be subject to the same motion -- by the time we get  
5 across the finish line it would be subject to the same motion  
6 practice, objection, everybody would -- the same thing that  
7 people would get to say to the proposed settlement with SNWA  
8 and MVIC as well.

9 THE COURT: Okay. Thank you. Thank you for letting  
10 us know.

11 So with that said, this -- although I hate taking  
12 matters under advisement, this absolutely necessitates that I  
13 take this under advisement. You know, I will try to get it out  
14 as expediently as I can.

15 They give us like the drop-dead date of 60 days. I'm  
16 hoping to do it well before then. No promises, but, you know,  
17 it will certainly not take months and months and years and  
18 years because I know that that really puts a stop on  
19 everything, and I know that you want to get this case moving  
20 along.

21 / / /

22 / / /

23 / / /

24 / / /

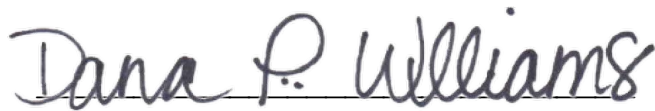

25 / / /

1 THE COURT: So thank you all. I hope you -- for  
2 those of you who are traveling back, that you do so safely.  
3 And have a great weekend.

4 (Proceedings concluded at 3:29 p.m.)

5 -oOo-

6 ATTEST: I do hereby certify that I have truly and correctly  
7 transcribed the audio/video proceedings in the above-entitled  
8 case to the best of my ability.

14 **FINDINGS OF FACT, CONCLUSIONS OF LAW, AND ORDER GRANTING PETITIONS**  
15 **FOR JUDICIAL REVIEW**

16 This matter comes before this Court on consolidated petitions for judicial review of State  
17 Engineer's Order 1309 filed by Petitioners:

- 18 • Southern Nevada Water Authority and Las Vegas Valley Water District
- 19 • Coyote Spring Investment, LLC
- 20 • Apex Holding Co. and Dry Lake Water, LLC
- 21 • The Center for Biological Diversity
- 22 • Muddy Valley Irrigation Company
- 23 • Nevada Cogeneration Associates Nos. 1 and 2
- 24 • Georgia-Pacific Gypsum LLC and Republic Environmental Technologies, Inc.
- 25 • Lincoln County Water District and Vidler Water Company.

The parties stipulated to permit the following Intervenors into this matter:

- Sierra Pacific Power Company d/b/a NV Energy and Nevada Power Company d/b/a NV Energy
- Moapa Valley Water District
- The Church of Jesus Christ of Latter-Day Saints
- City of North Las Vegas
- Western Elite Environmental, Inc. and Bedroc Limited, LLC.

In addition, some Petitioners intervened to respond to other petitions for judicial review. The Parties appeared by and through their respective counsels of record. The Court held oral argument from February 14, 2022 to February 17, 2022.

The Court having considered the evidence, the pleadings, together with opening and closing arguments presented at the hearing for these matters, and good cause appearing therefor, makes the following Findings of Fact, Conclusions of Law, and Order:

**I.**  
**PROCEDURAL HISTORY**

On June 15, 2020, the Nevada State Engineer issued Order No. 1309 as his latest administrative action regarding the Lower White River Flow System (“LWRFS”)<sup>1</sup>.

On June 17, 2020, the Las Vegas Valley Water District and the Southern Nevada Water Authority (collectively, “SNWA”) filed a petition for judicial review of Order 1309 in the Eighth Judicial District Court in Clark County, Nevada.<sup>2</sup> Subsequently, the following petitioners filed petitions for judicial review in the Eighth Judicial District Court: Coyote Spring Investments, LLC (“CSI”); Apex Holding Company, LLC and Dry Lake Water LLC (collectively, “Apex”); the Center Biological Diversity (“CBD”); Muddy Valley Irrigation Company (“MVIC”); Nevada

---

<sup>1</sup> SE ROA 2 – 69. The LWRFS refers to an area in southern Nevada made up of several hydrological basins that share the same aquifer as their source of groundwater. The Nevada State Engineer determined that this encompasses the area that includes Coyote Spring Valley, Muddy River Springs Area, California Wash, Hidden Valley, Garnet Valley, Kane Springs Valley and the northwest portion of the Black Mountains Area.

<sup>2</sup> LVVWD and SNWA Petition for Judicial Review, filed June 17, 2020.

1 Cogeneration Associates Numbers 1 and 2 (“Nevada Cogen”); and Georgia-Pacific Gypsum LLC,  
2 and Republic Technologies, Inc. (collectively, “Georgia-Pacific”). All petitions were consolidated  
3 with SNWA’s petition.<sup>3</sup>

4 Later, Sierra Pacific Power Company d/b/a NV Energy (“Sierra Pacific”) and Nevada  
5 Power Company d/b/a NV Energy (“Nevada Power” and, together with Sierra Pacific, “NV  
6 Energy”), Moapa Valley Water District (“MVWD”), the Church of Jesus Christ and of Latter-Day  
7 Saints (the “Church”), the City of North Las Vegas (“CNLV”), and Western Elite Environmental,  
8 Inc. and Bedroc Limited (collectively, “Bedroc”) <sup>4</sup> were granted intervention status in the  
9 consolidated petitions for judicial review of Order 1309.

10 On July 13, 2020, Lincoln County Water District and Vidler Water Co. (collectively,  
11 “Vidler”) timely filed their Petition for Judicial Review of State Engineer Order 1309 in the  
12 Seventh Judicial District Court in Lincoln County, Nevada, identified as Case No. CV-0702520.  
13 On August 26, 2020, the Seventh Judicial District Court issued an Order Granting Motion to  
14 Change Venue, transferring this matter to the Eighth Judicial District Court in Clark County,  
15 Nevada. Vidler appealed the Order Granting Motion to Change Venue to the Nevada Supreme  
16 Court, and on April 15, 2021, the Nevada Supreme Court entered its Order of Affirmation. On  
17 May 27, 2021, per verbal stipulation by the parties, the Court ordered this matter consolidated into  
18 Case No. A-20-816761-C. When transferred to the Eighth Judicial District Court, Vidler’s action  
19 was assigned Case No. A-21-833572-J. Notwithstanding the consolidation of all of the cases, each  
20 case retained its individual and distinct factual and legal issues.

21 Petitioners in all the consolidated actions filed their Opening Briefs on or about August 27,  
22 2021. Respondents State Engineer, Intervenors, and Petitioners who were Respondent-Intervenors  
23 filed their Answering Briefs on or about November 24, 2021. Petitioners filed their Reply Briefs on  
24 or about January 11, 2022.

25 \_\_\_\_\_  
26  
27 <sup>3</sup> Stipulation for Consolidation, A-20-816761-C, May 26, 2021.

28 <sup>4</sup> Bedroc and CNLV did not file briefs and did not participate in oral argument.

**II.**

**FACTUAL HISTORY**

**A. The Carbonate Groundwater Aquifer and the Basins**

Much of the bedrock and mountain ranges of Eastern Nevada are formed from a sequence of sedimentary rocks laid down during the Paleozoic Era. These formations are limestones or dolomites, commonly referred to as “carbonates,” due to the chemical composition of the minerals composing the rocks. These formations have been extensively deformed through folding and faulting caused by geologic forces. This deformation has caused extensive fracture and fault systems to form in these carbonate rocks, with permeability enhanced by the gradual solution of minerals. The result is an aquifer system that over time has accumulated large volumes of water with some apparent degree of connection throughout the much of area.<sup>5</sup> The valley floors in the basins of Eastern Nevada are generally composed of alluvium comprised largely of relatively young (<5 million years) unconsolidated sands, gravels, and clays. This sequence is loosely referred to as the “Alluvial Aquifer,” the aquifer for most shallow wells in the area. Most of the water in the Carbonate Aquifer is present due to infiltration of water thousands of years ago; recent recharge from present day precipitation may represent only a fraction of the water stored.

Approximately 50,000 square miles of Nevada sits atop of this geologic layer of carbonate rock, which contains significant quantities of groundwater.<sup>6</sup> This carbonate-rock aquifer system contains at least two major “regional flow systems” - continuous, interconnected, and transmissive geologic features through which water flows underground roughly from north to south: the Ash Meadows-Death Valley regional flow system; and the White River-Muddy River Springs system.<sup>7</sup> These flow systems connect the groundwater beneath dozens of topographic valleys across distances exceeding 200 miles.<sup>8</sup> The White River-Muddy River Springs flow system, stretching approximately

240 miles from southern Elko County in the north to the Muddy River Springs Area in the south, was identified as early as 1966.<sup>9</sup> The area designated by Order 1309 as the LWRFS consists generally of the southern portion of the White River-Muddy River Springs flow system.<sup>10</sup>

The Muddy River runs through a portion of the LWRFS before cutting southeast and discharging into Lake Mead.<sup>11</sup> Many warm-water springs, including the Muddy River Springs at issue in this litigation, discharge from the regional carbonate groundwater aquifer.<sup>12</sup> The series of springs, collectively referred to as the “Muddy River Springs” in the Muddy River Springs Area hydrographic basin form the headwaters of the Muddy River and provide the only known habitat for the endangered Moapa dace.<sup>13</sup>

The Muddy River Springs are directly connected to, and discharge from, the regional carbonate aquifer.<sup>14</sup> Because of this connection, flows from the springs are dependent on the elevation of groundwater within the carbonate aquifer, and can change rapidly in direct response to changes in carbonate groundwater levels.<sup>15</sup> As carbonate groundwater levels decline, spring flows decrease, beginning with the highest-elevation springs.<sup>16</sup>

As early as 1989, there were concerns that sustained groundwater pumping from the carbonate-rock aquifer would result in water table declines, substantially deplete the water stored in the aquifer, and ultimately reduce or eliminate flow from the warm-water springs that discharge from the aquifer.<sup>17</sup>

The general rule in Nevada is that one acquires a water right by filing an application to appropriate water with the Nevada Division of Water Resources (“DWR”). If the DWR approves the application, a “Permit to Appropriate” issues. Nevada has adopted the principle of “first in time, first in right,” also known as “priority.” The priority of a water right is determined by the date a permit is applied for. Nevada’s water resources are managed through administrative units called “hydrographic basins,” which are generally defined by topography, more or less reflecting boundaries between watersheds. Nevada is divided into 232 hydrographic basins (256 hydrographic basins and sub-basins, combined) based upon the surface geography and subsurface flow.

The priority of groundwater rights is determined relative to the water rights holder within the individual basins. If there is not enough water to serve all water right holders in a particular basin, “senior” appropriators are satisfied first in order of priority: the rights of “junior” appropriators may be curtailed. Historically, The Nevada State Engineer has managed hydrographic basins in a basin-by-basin manner for decades,<sup>18</sup> and administers and manages each basin as a discrete hydrologic unit.<sup>19</sup> The State Engineer keeps and maintains annual pumping inventories and records on a basin-by-basin basis.<sup>20</sup>

This administrative structure has worked reasonably well for basins where groundwater is pumped from “basin fill” aquifers or alluvium, where the annual recharge of the groundwater historically has been estimated based upon known or estimated precipitation data - establishing the amount of groundwater that is recharged annually and can be extracted sustainably from a basin, known as the “perennial yield.” In reality, many hydrographic basins are severely over-appropriated, due to inaccurate estimates, over pumping, domestic wells, changing climate conditions, etc.

Administration of groundwater rights is made particularly complex when the main source of

---

<sup>18</sup>SE ROA 654, 659, 699, 726, 755.  
<sup>19</sup> SE ROA 949-1069.  
<sup>20</sup> SE ROA 1070-1499.

1 groundwater is not “basin fill” or alluvium, but aquifers found in permeable geologic formations  
2 lying beneath the younger basin fill, and which may underlie large regions that are not well defined  
3 by the present-day hydrographic basins. This is the case with Nevada’s “Carbonate Aquifer.”

4 When necessary, the State Engineer may manage a basin that has been designated for  
5 administration. NRS 534.030 outlines the process by which a particular basin can be designated for  
6 administration by the State Engineer. In the instant case, six of the seven basins affected by Order  
7 No. 1309 had already been designated for management under NRS 534.030, including:

- 8 a. Coyote Spring Valley Hydrographic Basin (“Coyote Spring Valley”), Basin No. 210, since  
9 1985;
- 10 b. Black Mountains Area Hydrographic Basin (“Black Mountains Area”), Basin No. 215, since  
11 November 22, 1989;
- 12 c. Garnet Valley Hydrographic Basin (“Garnet Valley”), Basin No. 216, since April 24, 1990;
- 13 d. Hidden Valley Hydrographic Basin (“Hidden Valley”), Basin No. 217, since October 24,  
14 1990;
- 15 e. California Wash Hydrographic Basin (“California Wash”), Basin No. 218, since August 24,  
16 1990; and
- 17 f. Muddy River Springs Area Hydrographic Basin (“Muddy River Springs Area”), Basin No.  
18 219, since July 14, 1971.<sup>21</sup>

19 Kane Springs Valley (“Kane Springs Valley”), Basin 206, which was also affected by  
20 Order No. 1309, had not been designated previously for administration.<sup>22</sup>

21 See SE ROA 2-3, 71-72.

22 The Court takes judicial notice of Kane Springs Valley Basin’s status of not being designated for administration per  
NRS 534.030. <http://water.nv.gov/StateEngineersOrdersList.aspx> (available online at the Division of Water Resources.  
“Mapping& Data” tab, under “Water Rights” tab, “State Engineer’s Orders List and Search”). Facts that are subject to  
judicial notice “are facts in issue or facts from which they may be inferred.” NRS 47.130(1). To be judicially noticed, a  
fact must be “[g]enerally known” or “capable of accurate and ready determination by resort to sources whose accuracy  
cannot reasonably be questioned.” NRS 47.130(2); *Andolino v. State*, 99 Nev. 346, 351, 662 P.2d 631, 633-34 (1983)  
(courts may take judicial notice of official government publications); *Barron v. Reich*, 13 F.3d 1370, 1377 (9th Cir.  
1994) (courts may take judicial notice of documents obtained from administrative agencies); *Greeson v. Imperial Irr.  
Dist.*, 59 F.2d 529, 531 (9th Cir.1932) (courts may take judicial notice of “public documents”).

**B. The Muddy River Decree**

Over one hundred years ago, this Court issued the Muddy River Decree of 1920 (sometimes referred to herein as the “Decree” or “Muddy River Decree”), which established water rights on the Muddy River.<sup>23</sup> The Muddy River Decree recognized specific water rights,<sup>24</sup> identified each water right holder on the Muddy River, and quantified each water right.<sup>25</sup> MVIC specifically owns certain rights “. . . to divert, convey, and use all of said waters of said River, its head waters, sources of supply and tributaries, save and except the several amounts and rights hereinbefore specified and described . . . and to divert said waters, convey and distribute the same to its present stockholders, and future stockholders, and other persons who may have acquired or who may acquire temporary or permanent rights through said Company. . .”<sup>26</sup>. The Decree appropriates all water of the Muddy River at the time the Decree was entered, which was prior to any other significant development in the area. The predevelopment flow averaged approximately 33,900 acre feet per annum (“afa”).<sup>27</sup> The rights delineated through The Muddy River Decree are the oldest and most senior rights in the LWRFS.

**C. The Moapa Dace**

The Moapa dace (*Moapa coriacea*) is a thermophilic minnow endemic to the upper spring-fed reaches Muddy River, and has been federally listed as endangered since 1967.<sup>28</sup> Between 1933

---

<sup>23</sup> See Judgment and Decree, *Muddy Valley Irrigation Co. v. Moapa and Salt Lake Produce Co.* (the “Muddy River Decree” or “Decree”) (March 11, 1920) (SE ROA 33770-33816).

<sup>24</sup> SE ROA 33770-816. Specifically, the Muddy River Decree finds “[t]hat the aggregate volume of the several amounts and quantities of water awarded and allotted to the parties . . . is the total available flow of the said Muddy River and consumes and exhausts all of the available flow of the said Muddy River, its headwaters, sources of supply and tributaries.” SE ROA 33792-33793.

<sup>25</sup> SE ROA 33798-806.

<sup>26</sup> SE ROA 33775.

<sup>27</sup> See SNWA Report (June 2019) (SE ROA 41930 – 42072) at § 3.4.1 (SE ROA 41962) describing the predevelopment flows as measured in 1946 as 33,900 afa and the average flow measured from July 1, 1913 to June 30, 1915 and October 1, 1916 to September 30, 1917 as 34,000 afa. The NSE further recognizes 33,900 afa as the predevelopment flow. See Order 1309 (SE ROA 2-69) at p. 61 (SE ROA 62).

<sup>28</sup> SE ROA 5.

1 and 1950, the Moapa dace was abundant in the Muddy River and was estimated to inhabit as many  
2 as 25 individual springs and up to 10 miles of stream habitat. However, by 1983, the species only  
3 occurred in springs and two miles of spring outflows. Currently, approximately 95 percent of the  
4 total Moapa dace population occurs within 1.78 miles of one major tributary system that flows from  
5 three high-elevation spring complexes within the Muddy River Springs Area.<sup>29</sup>

6 Threats to the Moapa Dace include non-native predatory fishes, habitat loss from water  
7 diversions and impoundments, wildfire risk from non-native vegetation, and reductions to surface  
8 spring-flows resulting from groundwater development.<sup>30</sup> Because the Moapa dace is entirely  
9 dependent on spring flow, protecting the dace necessarily involves protecting the warm spring  
10 sources of the Muddy River.<sup>31</sup>

11 **D. Order 1169**

12 Significant pumping of the Carbonate Aquifer in the LWRFS began in the 1980s and  
13 1990s. Initial assessments of the water available in the Aquifer suggested it would provide a new  
14 abundant source of water for Southern Nevada. Because the prospective water resources of the  
15 LWRFS carbonate appeared to be substantial, nearly 100 water right applications for over 300,000  
16 acre feet were filed in State Engineer's office.<sup>32</sup>

17 By 2001, the State Engineer had granted more than 40,000 acre feet of applications in the  
18 LWRFS. The State Engineer considered additional applications for groundwater in Coyote Spring  
19 Valley and adjacent hydrographic basins. However, concerned over the lack of information  
20 regarding the sustainability of water resources from the Carbonate Aquifer, the State Engineer  
21 began hearings in July and August 2001 on water right applications.<sup>33</sup>

On March 8, 2002, the State Engineer issued Order 1169 to delay consideration of new water right applications and require the pumping of existing groundwater to determine what impact increased groundwater pumping would have on senior water rights and the environment at the Muddy River (“Aquifer Test”).<sup>34</sup> Order 1169 held in abeyance all applications for the appropriation of groundwater from the carbonate-rock aquifer system located in the Coyote Spring Valley Basin (Basin 210), Black Mountains Area Basin (Basin 215), Garnet Valley Basin (Basin 216), Hidden Valley Basin (Basin 217), Muddy River Springs aka Upper Moapa Valley Basin (Basin 210), and Lower Moapa Valley Basin (Basin 220).<sup>35</sup> California Wash (Basin 218) was subsequently added to this Order.<sup>36</sup>

Notably, Kane Springs was not included in the Order 1169 study area. In Ruling 5712, the State Engineer specifically determined Kane Springs would not be included in the Order 1169 study area because there was no substantial evidence that the appropriation of a limited quantity of water in Kane Springs would have any measurable impact on the Muddy River Springs that warranted the inclusion of Kane Springs in Order 1169.<sup>37</sup> The State Engineer specifically rejected the argument that the Kane Springs rights could not be appropriated based upon senior appropriated rights in the down gradient basins.<sup>38</sup>

Order 1169A, issued December 21, 2012, set up a test to “stress” the Carbonate Aquifer through two years of aggressive pumping, combined with examination of water levels in monitoring wells located throughout the LWRFS.<sup>39</sup> Participants in the Aquifer test were Southern Nevada Water Authority (“SNWA”), Las Vegas Valley Water District (“LVVWD”), Moapa Valley Water District, Coyote Springs Investments, LLC (“Coyote Springs”), Moapa Band of Paiutes, and Nevada

Power Company. Pumping included 5,300 afa in Coyote Spring Valley, 14,535 afa total carbonate pumping, and 3,840 afa alluvial pumping.<sup>40</sup> Pumping tests effects were examined at 79 monitoring wells and 11 springs and streamflow monitoring sites.<sup>41</sup> The Kane Springs basin was not included in the Order 1169 aquifer testing, and Kane Springs basin water right holders were not involved, not provided notice, and did not participate in the aquifer testing, monitoring or measurements, submission of reports, proceedings and actions taken by the State Engineer pursuant to Order 1169.<sup>42</sup>

The State Engineer’s conclusions from the pump test found an “unprecedented decline” in high-altitude springs, an “unprecedented decline” in water levels, and that additional pumping in the central part of Coyote Spring Valley or the Muddy River Spring Area could not occur without conflict with existing senior rights, including decreed surface water rights on the Muddy River, or the habitat of the Moapa Dace. The State Engineer attributed observed decreases in water levels in other areas of the basins to the pumping during the Order 1169 test and concluded that the test demonstrated connectivity within the Carbonate Aquifer of the LWRFS. On this basis, the State Engineer determined that the five basin LWRFS should be jointly managed.

In 2014, and based on the results of the Aquifer Test, the State Engineer issued Rulings 6254–6261 on January 29, 2014 denying all the pending groundwater applications in Coyote Springs Valley, Muddy River Springs Area, California Wash, Hidden Valley, Garnet Valley, and certain portions of the Black Mountains Area.<sup>43</sup> His rationale in each ruling was the same: “because these basins share a unique and close hydrologic connection and share virtually all of the same source and supply of water, unlike other basins in Nevada, these five basins will be jointly managed.”<sup>44</sup>

---

<sup>40</sup> The Order uses the term acre-foot per year (afy), but for consistency with common usage, this Court uses the equivalent term acre feet per annum.

1 **E. Interim Order 1303 and proceedings**

2 On January 11, 2019 -- nearly 17 years after issuing Order 1169, then-State Engineer Jason  
3 King issued Interim Order 1303 to start a two-phased administrative process to resolve the  
4 competing interests for water resources in the LWRFS.<sup>45</sup> He created the LWRFS as a joint  
5 administrative unit and invited stakeholders to participate in an administrative hearing to address  
6 the factual questions of what the boundary of the LWRFS should be, and what amount of  
7 groundwater could be sustainably pumped in the LWRFS.<sup>46</sup> The LWRFS is the first multi-basin  
8 area that the Nevada State Engineer has designated in state history. The ordering provisions in  
9 Interim Order 1303 provide in pertinent part:

- 10
- 11 1. The Lower White River Flow System consisting of the Coyote Spring Valley,  
12 Muddy River Springs Area, California Wash, Hidden Valley, Garnet Valley,  
13 and the portion of the Black Mountains Area as described in this Order, is  
14 herewith designated as a joint administrative unit for purposes of  
15 administration of water rights. All water rights within the Lower White River  
16 Flow System will be administered based upon their respective date of  
17 priorities in relation to other rights within the regional groundwater unit.

18 Any stakeholder with interests that may be affected by water right  
19 development within the Lower White River Flow System may file a report in  
20 the Office of the State Engineer in Carson City, Nevada, no later than the  
21 close of business on Monday, June 3, 2019.

22 Reports filed with the Office of the State Engineer should address the  
23 following matters:

- 24 a. The geographic boundary of the hydrologically connected groundwater  
25 and surface water systems comprising the Lower White River Flow  
26 System;
- 27 b. The information obtained from the Order 1169 aquifer test and  
28 subsequent to the aquifer test and Muddy River headwater spring flow as  
it relates to aquifer recovery since the completion of the aquifer test;
- c. The long-term annual quantity of groundwater that may be pumped  
from the Lower White River Flow System, including the relationships  
between the location of pumping on discharge to the Muddy River  
Springs, and the capture of Muddy River flow;

- d. The effects of movement of water rights between alluvial wells and carbonate wells on deliveries of senior decreed rights to the Muddy River; and,
- e. Any other matter believed to be relevant to the State Engineer's analysis.

SE ROA 647-48, Ex. 6.

The State Engineer identified the LWRFS as including the following hydrographic basins: Coyote Spring Valley, a portion of Black Mountains Area, Garnet Valley, Hidden Valley, California Wash, and the Muddy River Springs Area.<sup>47</sup> Kane Springs continued to be excluded as part of the LWRFS multi-basin area in Interim Order 1303.<sup>48</sup>

In July and August 2019, reports and rebuttal reports were submitted discussing the four matters set forth in Interim Order 1303. On July 25, 2019, the State Engineer issued a Notice of Pre-Hearing Conference, and on August 9, 2019, the State Engineer held a prehearing conference. On August 23, 2019, the State Engineer issued a Notice of Hearing (which it amended on August 26, 2019), noting that the hearing would be “the first step” in determining how to address future management decisions, including policy decisions, relating to the LWRFS.<sup>49</sup> He also indicated that the legal question of whether groundwater pumping in the LWRFS conflicts with senior water rights would be addressed in Phase 2 of the LWRFS administrative process.<sup>50</sup>

The Hearing Officer made it clear that “any other matter believed to be relevant” as specified in ordering paragraph 1(e) of Order 1303 would not include discussion of the administrative impacts of consolidating the basins or any policy matters affected by its decision. The State Engineer conducted a hearing on the reports submitted under Order 1303 between September 23, 2019, and October 4, 2019. At the start of the administrative hearing, the State Engineer reminded the parties the public administrative hearing was not a “trial-type” proceeding,

<sup>48</sup> *Id.*

<sup>49</sup> SE ROA 263, Ex. 2 (Notice); SE ROA 285, Ex. 3 (Amended Notice).

<sup>50</sup> SE ROA 522.

1 not a contested adversarial proceeding.<sup>51</sup> Cross-examination was limited to between 4-17 minutes  
2 per participant depending on the length of time given to a participant to present its reports.<sup>52</sup>

3 Following the submission by the participating stakeholders of closing statements at the  
4 beginning of December 2019, the State Engineer engaged in no additional public process and  
5 solicited no additional input regarding “future management decisions, including policy decisions,  
6 relating to the Lower White River Flow System basins.”<sup>53</sup>

7 **F. Order 1309**

8 On June 15, 2020, the State Engineer issued Order 1309.<sup>54</sup> The first three ordering  
9 paragraphs state as follows:

- 10 1. The Lower White River Flow System consisting of the Kane Springs Valley,  
11 Coyote Spring Valley, Muddy River Springs Area, California Wash, Hidden  
12 Valley, Garnet Valley, and the northwest portion of the Black Mountains Area  
13 as described in this Order, is hereby delineated as a single hydrographic basin.  
14 The Kane Springs Valley, Coyote Spring Valley, Muddy River Springs Area,  
15 California Wash, Hidden Valley, Garnet Valley and the northwest portion of  
16 the Black Mountains Area are hereby established as sub-basins within the  
17 Lower White River Flow System Hydrographic Basin.
- 18 2. The maximum quantity of groundwater that may be pumped from the Lower  
19 White River Flow System Hydrographic Basin on an average annual basis  
20 without causing further declines in Warm Springs area spring flow and flow in  
21 the Muddy River cannot exceed 8,000 afa and may be less.
- 22 3. The maximum quantity of water that may be pumped from the Lower White  
23 River Flow System Hydrographic Basin may be reduced if it is determined  
24 that pumping will adversely impact the endangered Moapa dace.

25 SE ROA 66, Ex. 1.

26 The Order does not provide guidance about how the new “single hydrographic basin” will  
27 be administered and provided no clear analysis as to the basis for the 8000 afa number for the  
28 maximum sustainable yield.

In its Order, the State Engineer indicated that it “considered this evidence and testimony [regarding basin inclusion and basin boundary] on the basis of a common set of criteria that are consistent with the original characteristics considered critical in demonstrating a close hydrologic connection requiring joint management in Rulings 6254-6261.”<sup>55</sup> However, the State Engineer did not disclose these criteria to the stakeholders before or during the Order 1303 proceedings. Instead, he disclosed them for the first time in Order 1309, after the stakeholders had engaged in extensive investigations, expert reporting, and factual hearing requested by Order 1303. The criteria are:

1. Water level observations whose spatial distribution indicates a relatively uniform or flat potentiometric surface are consistent with a close hydrologic connection.
2. Water level hydrographs that, in well-to-well comparisons, demonstrate a similar temporal pattern, irrespective of whether the pattern is caused by climate, pumping, or other dynamic is consistent with a close hydrologic connection.
3. Water level hydrographs that demonstrate an observable increase in drawdown that corresponds to an increase in pumping and an observable decrease in drawdown, or a recovery, that corresponds to a decrease in pumping, are consistent with a direct hydraulic connection and close hydrologic connection to the pumping location(s).
4. Water level observations that demonstrate a relatively steep hydraulic gradient are consistent with a poor hydraulic connection and a potential boundary.
5. Geological structures that have caused a juxtaposition of the carbonate-rock aquifer with low permeability bedrock are consistent with a boundary.
6. When hydrogeologic information indicate a close hydraulic connection (based on criteria 1-5), but limited, poor quality, or low resolution water level data obfuscate a determination of the extent of that connection, a boundary should be established such that it extends out to the nearest mapped feature that juxtaposes the carbonate-rock aquifer with low-permeability bedrock, or in the absence of that, to the basin boundary.

27  
28

After consideration of the above criteria, the State Engineer decided to finalize what was preliminarily determined in Interim Order 1303, and consolidated several administrative units into a single hydrographic basin, designated as the “Lower White River Flow System” or “LWRFS.” The State Engineer also added the previously excluded Kane Springs Hydrographic Basin to the LWRFS,<sup>56</sup> and modified the portion of the Black Mountains area that is in the LWRFS. Although Order 1309 did not specifically address priorities or conflict of rights, as a result of the consolidation of the basins, the relative priority of all water rights within the seven affected basins will be reordered and the priorities will be considered in relation to all water rights holders in the consolidated basins, rather than in relation only to the other users within the original separate basins.

**G. Petitioners and Their Respective Water Rights or Interests**

- a. Southern Nevada Water Authority and Las Vegas Valley Water District are government agencies serving Southern Nevada’s water needs, and own water rights in Coyote Springs Valley, Hidden Valley, Garnet Valley, and a significant portion of the Muddy River decreed rights.
- b. Coyote Spring Investments, LLC is a developer who owns water rights in Coyote Spring Valley, Kane Springs Valley, and California Wash;
- c. Apex Holding Company, LLC and Dry Lake Water LLC own real estate and water rights to the area of land commonly referred to as the Apex Industrial Park, in Garnet Valley and Black Mountains Area;
- d. The Center Biological Diversity is a national nonprofit conservation organization which does not hold any water rights, but has educational, scientific, biological, aesthetic and spiritual interests in the survival and recovery of the Moapa Dace;
- e. Muddy Valley Irrigation Company is a private company that owns most of the decreed rights

---

<sup>56</sup> The Court notes that the Nevada State Engineer determined that Kane Springs should be included in this joint management area, even though the Kane Springs Basin had not been designated previously for management through the statutory process delineated in under NRS 534.030.

- 1 in the Muddy River;
- 2 f. Nevada Cogeneration Associates Numbers 1 and 2, who operate gas-fired facilities at the
- 3 south end of the LWRFS and have water rights in the Black Mountain Area;
- 4 g. Georgia-Pacific Gypsum LLC, and Republic Technologies, Inc. are industrial companies that
- 5 have water rights in the Garnet Valley Hydrographic Basin;
- 6 h. Lincoln County Water District and Vidler Water Co. are a public water district and a private
- 7 company, respectively, and own water rights in Kane Springs Valley.

8 **III.**

9 **DISCUSSION**

10 **STANDARD OF REVIEW**

11 An aggrieved party may appeal a decision of the State Engineer pursuant to NRS 533.450(1).  
12 The proceedings, which are heard by the court, must be informal and summary, but must afford the  
13 parties a full opportunity to be heard. NRS 533.450(2). The decision of the State Engineer is  
14 considered to be prima facie correct, and the burden of proof is on the party challenging the  
15 decision. NRS 533.450(10).

16 **A. Questions of Law**

17 Questions of statutory construction are questions of law which require de novo review.  
18 The Nevada Supreme Court has repeatedly held courts have the authority to undertake an  
19 independent review of the State Engineer’s statutory construction, without deference to the State  
20 Engineer’s determination. *Andersen Family Assoc. v. Ricci*, 124 Nev. 182, 186, 179 P.3d 1201,  
21 1203 (2008) (citing *Bacher v. State Engineer*, 122 Nev. 1110, 1115, 146 P.3d 793, 798 (2006) and  
22 *Kay v. Nunez*, 122 Nev. 1100, 1103, 146 P.3d 801, 804 (2006)).

23 Any “presumption of correctness” of a decision of the State Engineer as provided by NRS  
24 533.450(10), “does not extend to ‘purely legal questions,’ such as ‘the construction of a statute,’  
25 as to which ‘the reviewing court may undertake independent review.’” *In re State Engineer*  
26 *Ruling No. 5823*, 128 Nev. 232, 238-239, 277 P.3d 449, 453 (2012) (quoting *Town of Eureka v.*  
27 *State Engineer*, 108 Nev. 163, 165, 826 P.2d 948, 949 (1992)). At no time will the State  
28

1 Engineer’s interpretation of a statute control if an alternative reading is compelled by the plain  
2 language of the statute. *See Andersen Family Assoc.*, 124 Nev. at 186, 179 P.3d at 1203.

3 Although “[t]he State Engineer’s ruling on questions of law is persuasive... [it is] not  
4 entitled to deference.” *Sierra Pac. Indus. v. Wilson*, 135 Nev. Adv. Op. 13, 440 P.3e 37, 40  
5 (2019). A reviewing court is free to decide legal questions without deference to an agency  
6 determination. *See Jones v. Rosner*, 102 Nev. 215, 216-217, 719 P.2d 805, 806 (1986); *accord*  
7 *Pyramid Lake Paiute Tribe v. Ricci*, 126 Nev. 521, 525, 245 P.3d 1145, 1148 (2010) (“[w]e  
8 review purely legal questions without deference to the State Engineer’s ruling.”).

9 **B. Questions of Fact**

10 The Court’s review of the Order 1309 is “in the nature of an appeal” and limited to the  
11 record before the State Engineer. *Revert v. Ray*, 95 Nev. 782, 786, 603 P.2d 262, 264 (1979). On  
12 appeal, a reviewing court must “determine whether the evidence upon which the engineer based  
13 his decision supports the order.” *State Engineer v. Morris*, 107 Nev. 699, 701, 819 P.2d 203, 205  
14 (1991) (citing *State Engineer v. Curtis Park*, 101 Nev. 30, 32, 692 P.2d 495, 497 (1985)).

15 As to questions of fact, the State Engineer’s decision must be supported by “substantial  
16 evidence in the record [.]” *Eureka Cty. v. State Engineer*, 131 Nev. 846, 850, 359 P.3d 1114, 1117  
17 (2015) (quoting *Town of Eureka*, 108 Nev. at 165, 826 P.2d at 949). Substantial evidence is “that  
18 which a reasonable mind might accept as adequate to support a conclusion.” *Bacher*, 122 Nev. at  
19 1121, 146 P.3d at 800 (finding that a reasonable person would expect quantification of water  
20 rights needed and no evidence of such quantification or calculations by the State Engineer is  
21 included in the record). The Court may not substitute its judgment for that of the State Engineer,  
22 “pass upon the credibility of the witness nor reweigh the evidence.” *Revert*, 95 Nev. at 786, 603  
23 P.2d at 264.

24 Where a decision is arbitrary and capricious it is not supported by substantial evidence.  
25 *See Clark Cty. Educ. Ass’n v. Clark Cty. Sch. Dist.*, 122 Nev. 337, 339-40, 131 P.3d 5, 7 (2006)  
26 (concluding that an arbitrator’s award was “supported by substantial evidence and therefore not  
27 arbitrary, capricious, or unsupported by the arbitration agreement”).

28 In *Revert*, 95 Nev. at 787, 603 P.2d at 264–65, the Nevada Supreme Court noted:

1

The applicable standard of review of the decisions of the State Engineer, limited to an inquiry as to substantial evidence, presupposes the fullness and fairness of the administrative proceedings: all interested parties must have had a ‘full opportunity to be heard,’ *See* NRS 533.450(2); the State Engineer must clearly resolve all the crucial issues presented, *See Nolan v. State Dep’t. of Commerce*, 86 Nev. 428, 470 P.2d 124 (1970) (on rehearing); the decisionmaker must prepare findings in sufficient detail to permit judicial review, *Id.*; *Wright v. State Insurance Commissioner*, 449 P.2d 419 (Or.1969); *See also* NRS 233B.125. When these procedures, grounded in basic notions of fairness and due process, are not followed, and the resulting administrative decision is arbitrary, oppressive, or accompanied by a manifest abuse of discretion, this court will not hesitate to intervene. *State ex rel. Johns v. Gragson*, 89 Nev. 478, 515 P.2d 65 (1973).

Thus, in order to survive review, Order 1309 must be statutorily authorized, resolve all crucial issues presented, must include findings in detail to permit judicial review, and must be based on substantial evidence.

**CONCLUSIONS OF LAW**

**A. The State Engineer Did Not Have the Authority to Jointly Administrate Multiple Basins by Creating the LWRFS “Superbasin,” Nor Did He Have the Authority to Conjunctively Manage This Superbasin.**

The powers of the State Engineer are limited to those set forth in the law. *See, e.g., City of Henderson v. Kilgore*, 122 Nev. 331, 334, 131 P.3d 11, 13 (2006); *Clark Cty. School Dist. v. Clark Cty. Classroom Teachers Ass’n*, 115 Nev. 98, 102, 977 P.2d 1008, 1011 (1999) (*en banc*) (An administrative agency’s powers “are limited to those powers specifically set forth by statute.”); *Clark Cty. v. State, Equal Rights Comm’n*, 107 Nev. 489, 492, 813 P.2d 1006, 1007 (1991)); *Wilson v. Pahrump Fair Water, LLC*, 137 Nev. Adv. Op. 2, 481 P.3d 853, 856(2021) (The State Engineer’s powers thereunder are limited to “only those . . . which the legislature expressly or implicitly delegates.”); *Andrews v. Nevada State Bd. of Cosmetology*, 86 Nev. 207, 208, 467 P.2d 96, 97 (1970) (“Official powers of an administrative agency cannot be assumed by the agency, nor can they be created by the courts in the exercise of their judicial function. The grant of authority to an agency must be clear.”) (*internal citation omitted*).

The Nevada Supreme Court has made clear that the State Engineer is a creature of statute and his or her actions must be within a statutory grant of authority. *Pahrump Fair Water LLC*, 481 P.3d

1 at 856 (explaining that “[t]he State Engineer’s powers thereunder are limited to ‘only those . . .  
2 which the legislature expressly or implicitly delegates’” (quoting *Clark Cty.*, 107 Nev. at 492, 813  
3 P.2d at 1007)); *see also Howell v. Ricci*, 124 Nev. 1222, 1230, 197 P.3d 1044, 1050 (2008) (holding  
4 that the State engineer cannot act beyond his or her statutory authority).

5 The State Engineer’s authority is outlined in NRS Chapters 532, 533 and 534. Chapter 533  
6 deals generally with “water rights,” which addresses surface water as well as groundwater, and  
7 chapter 534 is limited to groundwater, dealing specifically with “underground water and wells.”

8 In the instant case, the State Engineer relied on the following specific statutes as authority for  
9 combining prior independently designated basins as a superbasin newly named the LWRFS, and  
10 then conjunctively managing<sup>57</sup> this superbasin:

- 11 • NRS 533.024(1)(c), which is a legislative declaration “encourag[ing] the State Engineer to  
12 consider the best available science in rendering decisions concerning the available surface  
13 and underground sources of water in Nevada.”<sup>58</sup>
- 14 • NRS 534.024(1)(e), another legislative declaration that states the policy of Nevada is “[t]o  
15 manage conjunctively the appropriation, use and administration of all waters of this State,  
16 regardless of the source of the water.”<sup>59</sup>
- 17 • NRS 534.020, which provides that all waters of the State belong to the public and are subject  
18 to all existing rights.<sup>60</sup>
- 19 • NRS 532.120, which allows the State Engineer to “make such reasonable rules and  
20 regulations as may be necessary for the proper and orderly execution of the powers conferred  
21 by law.”<sup>61</sup>

---

22 <sup>57</sup> The Nevada Water Words Dictionary, defines “Conjunctive (Water) Use” in part, as “the integrated use and  
23 management of hydrologically connected groundwater and surface water.” *Water Words Dictionary, Nevada Division of  
24 Water Planning* (2022) (available online at <http://water.nv.gov/WaterPlanDictionary.aspx>) The same dictionary  
25 separately defines “Conjunctive Management” as, “the integrated management and use of two or more water resources,  
26 such as a (groundwater) aquifer and a surface body of water.” *Id.*

27 <sup>58</sup> SE ROA 43.

28 <sup>59</sup> *Id.*

<sup>60</sup> *Id.*

<sup>61</sup> SE ROA 44.

- 1 • NRS 534.110(6), which allows the State Engineer to conduct investigations into any basin  
2 where average annual replenishment is not adequate for the needs of all water rights holders,  
3 and then subsequently restrict withdrawals to conform to priority rights.<sup>62</sup>
- 4 • NRS 534 and specifically NRS 534.120, which allows the State Engineer to make such rules,  
5 regulations and orders as are deemed essential for the welfare of an area where the  
6 groundwater basin is being depleted.”<sup>63</sup>

7 However, as further discussed below, the State Engineer’s reliance on these statutes for  
8 authority is misplaced, and his actions upend the bedrock principles of the prior appropriation  
9 doctrine.

10 **1. The Prior Appropriation Doctrine**

11 The doctrine of prior appropriation has been part of Nevada’s common law since the 1800’s,  
12 and is a fundamental principle of water law in Nevada. *See Lobdell v. Simpson*, 2 Nev. 274, 277-78  
13 (1866). “An appropriative right ‘may be described as a state administrative grant that allows the use  
14 of a specific quantity of water for a specific beneficial purpose if water is available in the source free  
15 from the claims of others with earlier appropriations.’” *Desert Irr., Ltd. v. State*, 113 Nev. 1049,  
16 1051 n.1, 944 P.2d 835, 837 (1997) (quoting Frank J. Trelease & George A. Gould, *Water Law*  
17 *Cases and Materials* 33 (4th ed. 1986)).

18 “Water rights are given ‘subject to existing rights,’ NRS 533.430(1), given dates of priority,  
19 NRS 533.265(2)(b), and determined based on relative rights, NRS 533.090(1)-(2).” *Mineral Cty. v.*  
20 *Lyon Cty.*, 136 Nev. 503,513, 473 P.3d 418, 426 (2020). Thus, “[i]n Nevada, the doctrine of prior  
21 appropriation determines the priority of both pre-1905 vested water rights and modern statutory  
22 water law.” *Rand Properties, LLC v. Filippini*, 484 P.3d 275, Docket 78319 at 2 (Nev. 2021)  
23 (unpublished disposition). It is universally understood that the priority of a water right is its most  
24 valuable component. *See Gregory J. Hobbs, Jr., Priority: The Most Misunderstood Stick in the*  
25 *Bundle*, 32 *Envtl. L.* 37, 43 (2002) (“Priority determines the value of a water right”).

26 “A priority in a water right is property in itself”; therefore, “to deprive a person of his

27 <sup>62</sup> *Id.*

28 <sup>63</sup> *Id.*

1 priority is to deprive him of a most valuable property right.” *Colorado Water Conservation*  
2 *Bd. v. City of Cent.*, 125 P.3d 424, 434 (Colo. 2005) (internal quotation marks omitted). “A loss of  
3 priority that renders rights useless ‘certainly affects the rights’ value’ and ‘can amount to a de facto  
4 loss of rights.’” *Wilson v. Happy Creek, Inc.*, 135 Nev. 301, 313, 448 P.3d 1106, 1115 (2019)  
5 (quoting *Andersen Family Assocs.*, 124 Nev. at 190-1, 179 P.3d at 1201).

6 Nevada’s statutory water law reflects the importance of priority. Not only did the  
7 Legislature choose not to bestow the State Engineer with discretion to alter priority rights, but it also  
8 affirmatively requires the State Engineer to preserve priority rights when performing the State  
9 Engineer’s statutory duties. *See, e.g.*, NRS 534.110(6) (providing that any curtailment “be restricted  
10 to conform to priority rights”); NRS 534.110(7) (same); NRS 533.040(2) (“If at any time it is  
11 impracticable to use water beneficially or economically at the place to which it is appurtenant, the  
12 right may be severed from the place of use and be simultaneously transferred and become  
13 appurtenant to another place of use, in the manner provided in this chapter, without losing priority of  
14 right.”).

15 The prior appropriation doctrine in Nevada, “the driest state in the Nation”<sup>64</sup> becomes  
16 particularly critical when, as in the instant case, there is not enough water to satisfy all of the  
17 existing rights of the current water right holders, and the threat of curtailment looms ominously in  
18 the near future. One of the greatest values of a senior priority right is the assurance that the holder  
19 will be able to use water even during a time of water shortage because junior water right holders will  
20 be curtailed first. Thus, senior right holders rely on their senior priority rights when developing  
21 businesses, entitling and permitting land development, negotiating agreements, making investments,  
22 obtaining permits and various approvals from State and local agencies, and generally making  
23 financial and other decisions based on the relative certainty of their right.

24 Priority in time of a right is only as valuable as where the holder stands in relation to others  
25 in the same situation, or more specifically in this case, in the same basin. As the statutes are written,  
26

27 \_\_\_\_\_  
28 <sup>64</sup> *United States v. State Engineer*, 117 Nev. 585, 592, 27 P.3d 51, 55 (2001)( Becker, J., concurring in part and  
dissenting in part).

1 water right holders only compete in time for their “place in line” with other water right holders in  
2 their same basin. Therefore, the year that one acquires a priority right is only as important as the  
3 year that other water right holders in your basin acquired theirs. It is in this setting that State  
4 Engineer has issued Order 1309.

5 **2. Joint Administration**

6 The State Engineer’s position is that the “best available science” demonstrates that the  
7 seven<sup>65</sup> named hydrographic basins are so hydrologically interconnected that science dictates they  
8 must be managed together in one superbasin. However, NRS 533.024(1)(c) is a policy declaration  
9 of the Legislature’s intent that simply “encourages” the State Engineer “to consider the best  
10 available science in rendering decisions” that concern water he has authority to manage. NRS  
11 533.024(1)(c).

12 Statements of policy from the Legislature do not serve as a basis for government action, but  
13 rather inform the interpretation of statutes that authorize specific action. *See, Pawlik v. Deng*, 134  
14 Nev. 83, 85, 412 P.3d 68, 71 (2018). In *Pawlik*, the Nevada Supreme Court expressed the relevance  
15 of statements of policy in terms as follows: “if the statutory language is subject to two or more  
16 reasonable interpretations, the statute is ambiguous, and we then look beyond the statute to the  
17 legislative history and interpret the statute in a reasonable manner ‘in light of the policy and the  
18 spirit of the law.’” *Id.* (quoting *J.E. Dunn Nw., Inc. v. Corus Constr. Venture, LLC*, 127 Nev. 72, 79,  
19 249 P.3d 501, 505 (2011)).

20 While such statements of policy are accorded deference in terms of statutory interpretation,  
21 the Nevada Supreme Court has specifically held that they are not binding. *See McLaughlin v. Hous.*  
22 *Auth. of the City of Las Vegas*, 227 P.2d 206, 93 (1951) (“It has often been said that the declaration  
23 of policy by the legislature, though not necessarily binding or conclusive upon the courts, is entitled  
24 to great weight, and that it is neither the duty nor prerogative of the courts to interfere in such  
25 legislative finding unless it clearly appears to be erroneous and without reasonable foundation.”); *see*  
26

27  
28 

---

<sup>65</sup> More accurately, the LWRFS is comprised of six hydrographic basins and a portion of a seventh.

1 also *Clean Water Coal. v. M Resort, LLC*, 127 Nev. 301, 313, 255 P.3d 247, 255 (2011) (“The State  
2 acknowledges that when legislative findings are expressly included within a statute, those findings  
3 should be accorded great weight in interpreting the statute, but it points out that such findings are not  
4 binding and this court may, nevertheless, properly conclude that section 18 is a general law despite  
5 the Legislature's declaration to the contrary.”).

6 Statements of policy set forth by the Legislature are therefore not operative statutory  
7 enactments, but rather tools to be used in interpreting operative statutes—and only then where such  
8 statutes are ambiguous on their face. *See Pawlik*, 134 Nev. at 85, 412 P.3d at 71; *see also Cromer v.*  
9 *Wilson*, 126 Nev. 106, 109-10, 225 P.3d 788, 790 (2010) (if the plain language of a statute “is  
10 susceptible of another reasonable interpretation, we must not give the statute a meaning that will  
11 nullify its operation, and we look to policy and reason for guidance”).

12 This statement of policy is not, in and of itself, a grant of authority that allows the State  
13 Engineer to change boundaries of established hydrographic basins as science dictates. This Court  
14 certainly acknowledges that since the time the 256 hydrographic basins and sub-basins were  
15 delineated, that science and technology have made great strides. While certain navigable waters and  
16 topography were more easily identifiable at the time the basins were established, the complexity lies  
17 in the less obvious interconnectivity and formations of sub-surface structures that were more  
18 difficult to detect at that time. There is no doubt that scientific advancements allow experts to more  
19 accurately assess sub-surface formations and groundwater than they have in the past, and certainly  
20 technology will continue to improve accuracy in the future. However, this Court notes that the  
21 Legislature specifically used the word “encourages” to describe how the Nevada State Engineer  
22 should utilize the best available science. NRS 533.024(1)(c). The statute does not declare that the  
23 best available science should dictate the decisions.

24 Indeed, if science was the sole governing principle to dictate the Nevada State Engineer’s  
25 decisions, there would be a slippery slope in the changes that could be made in the boundaries of the  
26 basins and how they are managed; each time scientific advancements and discoveries were made  
27 regarding how sub-surface water structures are situated or interconnected, under this theory of  
28

1 authority, the Nevada State Engineer could change the boundaries of the existing basins. Each  
2 boundary change would upend the priority of water right holders as they relate to the other water  
3 right holders in the new, scientifically-dictated “basin.” This would lead to an absurd result as it  
4 relates to the prior appropriation doctrine. Every water right holder would be insecure in their  
5 priority, as their relative priority could change at any moment that science advances in determining  
6 further interconnectivity of water below the surface. In the administration of water rights, the  
7 certainty of those rights is particularly important and prior appropriation is “largely a product of the  
8 compelling need for certainty in the holding and use of water rights.” *Mineral Cty. v. Lyon Cty.*, 136  
9 Nev. at 518, 473 P.3d at 429 (quoting *Arizona v. California*, 460 U.S. 605, 620 (1983)). Science in  
10 and of itself cannot alter common law and statutes. Thus, the State Engineer’s reliance on NRS  
11 533.024(1)(c) for giving him authority to create a superbasin out of seven existing basins is  
12 misplaced.

13 While NRS 532.120 allows the State Engineer to make reasonable rules and regulations as  
14 may be necessary for proper and orderly execution, this authority is not without its limits, and is  
15 only authorized for those “powers conferred by law.” Nothing in Chapters 532, 533 or 534 gives the  
16 State Engineer direct authority to eliminate, modify, or redraw the boundaries of existing  
17 hydrographic basins, or to consolidate multiple, already established, hydrographic basins into a  
18 single hydrographic superbasin. For at least 50 years, holders of groundwater rights in Nevada have  
19 understood a “hydrographic basin” to be an immutable administrative unit. This has been the case  
20 regardless of whether the boundaries of the unit accurately reflected the boundaries of a particular  
21 water resource. The Nevada Legislature has adopted a comprehensive scheme that provides the  
22 framework for the State Engineer to administer surface water and groundwater. Moreover, the State  
23 Engineer has, for decades, administered water on the basis of hydrographic basins identified,  
24 described, and released to the public and relied upon by the Legislature, former State Engineers, and  
25 the public. Applications to appropriate water are and have been on the basis of each hydrographic  
26 basin. Protests, agreements, and resolutions of water applications have been on the basis of each  
27 basin. Furthermore, statutes require that the State Engineer consider available water and  
28

1 appropriations based on the basins already defined.

2 It is interesting to note that in the statutes that *do* confer authority on the Nevada State  
3 Engineer to manage water, they specifically mention the management as being done on a basin-by-  
4 basin (or a sub-basin within a basin) basis. NRS 534.030 is the original source of authority for the  
5 State Engineer’s designation of an “administrative area” by “basin.” NRS 534.030. Through NRS  
6 534.030 and NRS 534.011, the State Engineer has authority to designate “any groundwater basin, or  
7 portion therein” an “area of active management,” which refers to an area “[i]n which the State  
8 Engineer is conducting particularly close monitoring and regulation of the water supply because of  
9 heavy use of that supply.” Under the statute’s plain meaning, a *basin* is intended to be an  
10 *administrative unit*, defined by boundaries described by “legal subdivision as nearly as possible.”  
11 NRS 534.030(1)(b). In other words, a hydrographic basin so designated was synonymous with an  
12 administrative unit—a *legal* construct, defined thereafter by a *geographic* boundary. Water rights  
13 within these basins are to be administered according to the laws set forth in NRS Chapters 533 and  
14 534, and the principles of prior appropriation are applied to water uses *within* each basin.

15 Moreover, the Legislature consistently refers to a singular basin throughout the statute. *See*,  
16 *e.g.*, 534.030(1) (describing a petition under NRS Chapter 534 as one that requests the State  
17 Engineer “to administer the provisions of this chapter as relating to designated areas, ... in any  
18 particular basin or portion therein”); NRS 534.030(2) (“a groundwater basin”); NRS 534.030(2)  
19 (“the basin”). In fact, in the State Engineer’s prior rulings and orders, including Order 1169, Order  
20 1169A, and Rulings 5712 and 6455, the State Engineer employs a basin-by-basin management  
21 approach.

22 NRS 534.110(6) sets forth the State Engineer’s ability to make basin-specific determinations  
23 and provides the authority to curtail water rights where investigations into specific basins  
24 demonstrate that there is insufficient groundwater to meet the needs of all permittees and all vested-  
25 right claimants. NRS 534.110 plainly applies to investigations concerning administration and  
26 designation of critical management areas within a basin. If the State Engineer conducts an  
27 investigation as set forth in NRS 534.110(6) and determines that the annual replenishment to the  
28

1 groundwater supply is not adequate for the permittees and vested-right claimants, he has the  
2 authority to either (1) order that withdrawals from domestic wells be restricted to conform to priority  
3 rights, or (2) designate as a critical management area the basin in which withdrawals of groundwater  
4 consistently exceed the perennial yield. NRS 534.110(6)-(7). It is important to note, however, that  
5 the statute does not provide authority to change the boundaries of established basins, combine  
6 multiple basins into one unit or superbasin, and then modify or curtail groundwater rights based  
7 upon restructured priority dates in this newly created superbasin.

8           The Court acknowledges that the State Engineer can and should take into account how water  
9 use in one basin may affect the water use in an adjoining or closely related basin when determining  
10 how best to “actively manage” a basin. However, this is much different than how the State Engineer  
11 defines “joint management”: erasing the borders of seven already established legal administrative  
12 units and creating one legal superunit in the LWRFS superbasin. If the Legislature intended for the  
13 State Engineer to designate areas across multiple basins for “joint administration,” it would have so  
14 stated. *See Slade v. Caesars Entm’t Corp.*, 132 Nev. 374, 380-81, 373 P.3d 74, 78 (2016) (citing  
15 Antonin Scalia & Bryan A. Garner, *Reading Law: The Interpretation of Legal Texts*, 107 (2012)  
16 (“The expression of one thing implies the exclusion of others.”)). Thus, under NRS 534.030, while  
17 the State Engineer can administer basins individually, the statute does not allow the State Engineer  
18 to combine basins for joint administration, nor do NRS 532.120, NRS 533.024, or NRS 534.110(6)  
19 confer express authority on the State Engineer to do so.

20           **3. Conjunctive Management**

21           The Nevada State Engineer relies on NRS 534.024(1)(e), as the source of authority that  
22 allows him to manage both surface and groundwater together through “conjunctive management.”<sup>66</sup>  
23 Historically, surface water and ground water have been managed separately. In fact, the term  
24 “conjunctive management” was only introduced in the statutes in the 2017 session of the Nevada  
25 Legislature when it added subsection 1(e) to NRS 533.024. However, as discussed previously, this  
26

27  
28 \_\_\_\_\_  
<sup>66</sup> SE ROA 43.

1 statute is a declaration of legislative intent, and as a statement of policy, it does not constitute a grant  
2 of authority to the State Engineer, nor is it a water management tool in and of itself.

3 In fact, there is no authority or guidance whatsoever in the statutes as to how to go about  
4 conjunctively managing water and water rights. While the Court agrees that it makes sense to take  
5 into account how certain groundwater rights may affect other surface water rights when managing  
6 water overall, as this Court noted previously, the powers of the State Engineer are limited to those  
7 set forth in the law. While Nevada law provides certain tools for the management of water rights in,  
8 for example, over appropriated basins, *e.g.*, NRS 534.110(7) (authorizing the State Engineer to  
9 “designate as a critical management area any basin in which withdrawals of groundwater  
10 consistently exceed the perennial yield of the basin”), nothing in Chapters 532, 533 or 534 gives the  
11 State Engineer express authority to conjunctively manage, in this proceeding, both the surface and  
12 groundwater flows he believes are occurring in the LWRFS superbasin.

13 This Court finds that as a result of the consolidation of the basins, the relative priority of all  
14 water rights within the seven affected basins will be reordered and the priorities will be considered  
15 in relation to all water rights holders in the consolidated basins, rather than in relation only to the  
16 other users within the original separate basins.<sup>67</sup> By redefining and combining seven established  
17 basins for “joint administration,” and “conjunctive management,” the State Engineer essentially  
18 strips senior right holders of their priority rights by deciding that all water rights within the LWRFS  
19 superbasin should be administered based upon their respective dates of priority in relation to other  
20 rights “within the regional groundwater unit.”

21 The State Engineer’s position is that the determination of conflicts and priorities has not yet  
22 occurred since that is to occur in the second step of the proceeding. However, by the very nature of  
23 erasing the existing basins and putting all of the water rights holders in one superbasin, he has  
24

25 \_\_\_\_\_  
26 <sup>67</sup> This Court rejects the State Engineer’s argument that Order 1309 did not change priorities merely because it did not  
27 change priority dates. His argument conflates the meaning of *priority* as defined by the date of a water right application,  
28 and the common meaning of *priority*, as defined by one’s “place in line.” While it is true that the Order does not change  
priority dates, this Court finds that it *does* change the relative priorities, as petitioners who previously held the most  
senior rights within their singular basin may now be relegated to more junior status within the “superbasin.”

already reprioritized certain rights as they relate to one another, even if their priority dates remain the same.<sup>68</sup> As a result of creating this superbasin, water rights holders with some of the most senior priority rights within their basin are now relegated to a much a lower priority position than some water right holders in basins outside of their own. Such a loss of priority would potentially render certain water rights valueless, given the State Engineer’s restrictions on pumping in the entire LWRFS. The Court concludes that the State Engineer does not have authority to redefine Nevada basins so as to reorder the priority rights of water right holders through conjunctive management within those basins. Accordingly, Order 1309 stands at odds with the prior appropriation doctrine.

The Court determines that the question of whether the State Engineer has *authority* to change the boundaries of basins that have been established for decades, or subject that newly created basin to conjunctive management, or not, is a legal question, not a factual one. The State Engineer has failed to identify a statute that authorizes him to alter established basin boundaries or engage in conjunctive management. Based upon the plain language of the applicable statutes, the Court concludes that the State Engineer acted outside the scope of his authority in entering Order 1309.

**B. The State Engineer Violated Petitioners’ Due Process Rights in Failing to Provide Notice to Petitioners or an Opportunity to Comment on the Administrative Policies Inherent in the Basin Consolidation.**

The Nevada Constitution protects against the deprivation of property without due process of law. Nev. Const. art. 1, § 8(5). “Procedural due process requires that parties receive notice and an opportunity to be heard.” *Eureka Cty. V. Seventh Jud. Dist. Ct.*, 134 Nev. 275, 279, 417 P.3d 1121, 1124 (2018)(internal quotation marks omitted). “In Nevada, water rights are ‘regarded and protected as real property.’” *Id.*(quoting *Application of Filippini*, 66 Nev. 17, 21-22, 202 P.2d 535,

---

<sup>68</sup> Although this Court refrains from analyzing whether or not 1309 is supported by substantial evidence, the Court notes that part of the State Engineer’s 1309 decision of limiting use to 8,000afa or less is based on the concern of adversely impacting the endangered Moapa Dace, located in the Muddy River Springs. This decision does not appear to take into account more nuanced effects of how pumping in each separate basin affects the Muddy River flows, no matter how far away the basin is from the river. In other words, reprioritization of each water rights holder in relation to the other (by prioritization date in the newly created superbasin) means that their standing (and more importantly, their potential for curtailment) is only by date. Water use in one basin may not have the same effect as another in reducing Muddy River flows; however, these distinguishing factors are all erased by combining all of the basins together for joint administration.

1 537 (1949)). Therefore, holders of water rights in Nevada are entitled to constitutional protections  
2 regarding those property rights, including procedural due process. *See id.*

3 The Nevada Supreme Court has held that “[a]lthough proceedings before administrative  
4 agencies may be subject to more relaxed procedural and evidentiary rules, due process guarantees of  
5 fundamental fairness still apply.” *Dutchess Bus. Serv.’s, Inc. v. Nev. State Bd. of Pharmacy*, 124  
6 Nev. 701, 711, 191 P.3d 1159, 1166 (2008). In *Dutchess*, the Nevada Supreme Court noted further  
7 that “[a]dministrative bodies must follow their established procedural guidelines and give notice to  
8 the defending party of ‘the issues on which decision will turn and . . . the factual material on which  
9 the agency relies for decision so that he may rebut it.’” *Id.*

10 With respect to notice and hearing, the Nevada Supreme Court has held that “[i]nherent in  
11 any notice and hearing requirement are the propositions that the notice will accurately reflect the  
12 subject matter to be addressed and that the hearing will allow full consideration of it.” *Public Serv.*  
13 *Comm’n of Nev. v. Southwest Gas Corp.*, 99 Nev. 268, 271, 772 P.2d 624, 626 (1983). “Notice must  
14 be given at an appropriate stage in the proceedings to give parties meaningful input in the  
15 adjudication of their rights.” *Seventh Jud. Dist. Ct.*, 134 Nev. at 280-81, 417 P.3d at 1125-26 (citing  
16 *Hamdi v. Rumsfeld*, 542 U.S. 507, 533, 124 S.Ct. 2633, 159 L.Ed.2d 578 (2004) (“It is equally  
17 fundamental that the right to notice and an opportunity to be heard must be granted at a meaningful  
18 time and in a meaningful manner.”). A party’s due process rights attach at the point at which a  
19 proceeding holds the *possibility* of curtailing water rights, and due process necessitates notice of that  
20 possibility to the party potentially affected.<sup>69</sup>

21 For the reasons that follow, this Court concludes that (a) the notice and hearing procedure  
22 employed by the State Engineer failed to satisfy the requirements of due process because the notice  
23 failed to put the parties on notice that the State Engineer would decide on a management protocol for  
24 \_\_\_\_\_

25 <sup>69</sup> “[B]ecause the language in the show cause order indicates that the district court may enter an order forcing curtailment  
26 to begin, junior water rights holders must be given an opportunity to make their case for or against the option of  
27 curtailment. Notice must be given at an appropriate stage in the proceedings to give parties meaningful input in the  
28 adjudication of their rights... Thus, junior water rights holders must be notified before the curtailment decision is made,  
even if the specific “how” and “who” of curtailment is decided in a future proceeding.” *Seventh Jud. Dist. Ct.*, 134 Nev.  
275, 280–81, 417 P.3d 1121, 1125 (2018).

the LWRFS at the conclusion of the proceeding; (b) the hearing itself failed to satisfy due process because the parties were not afforded a full and complete opportunity to address the implications of the State Engineer’s decision to subject the LWRFS to conjunctive management and joint administration, and (c) the State Engineer’s nondisclosure, before or during the Order 1303 proceedings of the six criteria he would use in evaluating the connectivity of the basins and determining the new consolidated basin boundary, failed to satisfy the requirements of due process.

Specifically, the notice of hearing and amended notice of hearing (“Notice”) noticed an opportunity for the parties that submitted Order 1303 reports to explain their positions and conclusions with respect to the questions posed for consideration in Order 1303.<sup>70 71</sup> But the questions posed in Order 1303 did not relate to management of the LWRFS, such as issues of conjunctive or joint administration, but rather related to factual inquiries. Instead, Order 1303 specifically authorized stakeholders to file reports addressing four specific areas, none of which related to the management of the LWRFS.<sup>72</sup>

In noticing the hearing to consider the reports submitted pursuant to Order 1303, there was no mention of consideration of the prospective management of the LWRFS, *i.e.*, whether it would be appropriately managed conjunctively and as a joint administrative unit. Indeed, this was consistent with the Hearing Officer’s opening remarks at the August 8, 2019, prehearing conference in which

---

<sup>70</sup> See SE ROA 262-82, Ex. 2; SE ROA 284-301, Ex. 3

<sup>71</sup> The Notice included the following summary:

On August 9, 2019, the State Engineer held a pre-hearing conference regarding the hearing on the submission of reports and evidence as solicited in Order 1303.... The State Engineer established that the purpose of the hearing on the Order 1303 reports was to provide the participants an opportunity to explain the positions and conclusions expressed in the reports and/or rebuttal reports submitted in response to the Order 1303 solicitation. The State Engineer directed the participants to limit the offer of evidence and testimony to the salient conclusions, including directing the State Engineer and his staff to the relevant data, evidence and other information supporting those conclusions. ***The State Engineer further noted that the hearing on the Order 1303 reports was the first step in determining to what extent, if any, and in what manner the State Engineer would address future management decisions, including policy decisions, relating to the Lower White River Flow System basins. On that basis, the State Engineer then addressed other related matters pertaining to the hearing on the Order 1303 reports, including addressing the date and sequence of the hearing, as set forth in this Notice of Hearing.*** SE ROA 285, Ex. 3 (emphasis added).

<sup>72</sup> SE ROA 647-48. Ex. 6.

1 the State Engineer actively discouraged participants from providing input regarding that very  
2 question. The hearing officer stated as follows at the August 8 prehearing conference:

3           And so, and I'm going to talk about this and we've spoken about this before, is  
4 that really this is a threshold reporting aspect, that this is part of a multi-tiered  
5 process in terms of determining the appropriate management strategy to the  
6 Lower River Flow System.

7           This larger substantive policy determination is not part of the particular  
8 proceeding. That's part of later proceedings....

9           SE ROA 522, Ex. 5 (Hr'g Tr. at 10:6-20).

10           The hearing officer gave additional consistent guidance at the outset of the September 23  
11 hearing, further directing the parties not to address policy issues even in relation to the fact that  
12 Order 1303 authorized stakeholders to include in their reports "[a]ny other matter believed to be  
13 relevant to the State Engineer's analysis."<sup>73</sup> Specifically, the Hearing Officer directed as follows:

14           And while that fifth issue is [as set forth in Ordering Paragraph 1(e) of Order  
15 1303] not intended to expand the scope of this hearing into making policy  
16 determinations with respect to management of the Lower White River Flow  
17 System basin's individual water rights, those different types of things, because  
18 those are going to be decisions that would have to be made in subsequent  
19 proceedings should they be necessary.

20           SE ROA 52962, Ex. 26 (Hr'g Tr. 6:4-15).

21           Not only did the notice not adequately notify the parties of the possibility of the  
22 consideration and resolution of policy issues, but the Hearing Officer consistently  
23 directed the parties to avoid the subject, compounding the due process violation.

24           Notwithstanding the Hearing Officer's admonitions and the plain language of the notice, the  
25 State Engineer ultimately issued a dramatic determination regarding management of the LWRFS. In  
26 doing so, the State Engineer precluded the participants from providing input that would have  
27 allowed for the full consideration of the issue. Specifically, participants and experts did not have the  
28 opportunity to, and were actively discouraged from addressing policy issues critical to the

28

management of the LWRFS.<sup>74</sup> The refusal to consider these issues ensured that the State Engineer’s decision was not based on a fully developed record.

The State Engineer acknowledged as much in Order 1309 itself. There, the State Engineer noted the fact that Georgia-Pacific and Republic raised concerns over the sufficiency of the scope of the proceedings at hearing but inexplicably asserted that a to-be-determined management scheme would be developed to address “management issues” in the LWRFS:

Georgia-Pacific and Republic asserted that boundaries are premature without additional data and without a legally defensible policy and management tools in place. They expressed concern that creating an administrative unit at this time inherently directs policy without providing for due process. The State Engineer has considered these concerns and agrees that additional data and improved understanding of the hydrologic system is critical to the process. He also believes that the data currently available provide enough information to delineate LWRFS boundaries, and that an effective management scheme will provide for the flexibility to adjust boundaries based on additional information, retain the ability to address unique management issues on a sub-basin scale, and maintain partnership with water users who may be affected by management actions throughout the LWRFS.

SE ROA 54, Ex. 1.

This language reflects a serious misunderstanding of the effect of Order 1309. Insofar as Order 1309 subjects the LWRFS to conjunctive management and joint administration, resulting in effectively reordering of priority of water rights in the LWRFS superbasin, the order effectuates a management scheme with far reaching consequences. Thus, agreeing on the one hand that an “effective management scheme” will be necessary to address challenges in the LWRFS, but

---

<sup>74</sup> These issues include, but are not limited to: whether Nevada law allows the State Engineer to conjunctively manage multiple hydrographic basins in a manner that modifies the relative priority of water rights due to the administration consolidation of basins; whether the State Engineer would establish a “critical management area” pursuant to NRS 534.110 and, if so, whether he would develop a groundwater management plan or defer to the stakeholders to develop one; whether Nevada law gives the State Engineer authority to designate a management area that encompasses more than one basin; whether “safe-yield” discrete management areas should be established within the proposed administrative unit; whether water rights holders enjoy a “property right” in the relative priority of their water rights such that impairing that right may constitute a “taking”; whether unused (or only sporadically used) senior water rights take precedence over certificated or fully used junior rights, particularly where these junior rights are in continuous use to support economically significant enterprises; whether States compel quantification of federal reserved rights by a date certain; and whether the State Engineer should approach the legislature to seek different or additional management tools or authority. *See* SE ROA 52801-8, Ex. 25 (Georgia Pacific and Republic Closing Argument, outlining policy questions for consideration by the State Engineer at later proceedings, proceedings that never took place).

contending it will be developed in the future, reveals a lack of appreciation of the implications of the order to the detriment of not only the participants but all water rights holders in the LWRFS basins. Without consideration of the implications of the management decision contained in the order, it cannot be based on a full consideration of the issues presented. In affirmatively limiting the scope of the proceeding to include a full consideration of the issues, the State Engineer violated the stakeholders' due process rights. Both the notice and the hearing procedures employed failed to comport with due process.

Finally, as noted above, the State Engineer did not give notice or disclose before or during the Order 1303 proceedings, the six specific criteria that he would use in evaluating the connectivity of the basins and determining the new consolidated basin boundary. Although the State Engineer asserted that he considered the evidence and testimony presented in the public hearing "on the basis of a common set of criteria that are consistent with the original characteristics conserved critical in demonstrating a close hydrologic connection requiring joint management in Rulings 6254-6261,"<sup>75</sup> a review of these rulings reveals that none of the six criteria or characteristics were previously identified, examined in the hydrological studies and subsequent hearing that followed the completion of the Order 1169 aquifer test, or expressly disclosed in Rulings 6254-6261.<sup>76</sup> These criteria were instead explicitly disclosed for the first time in Order 1309, which means the participants had no opportunity to directly address these criteria in their presentations, or critically, to address the appropriateness of these criteria.

This Court is unpersuaded by the State Engineer's argument that it could develop the criteria only after it heard all the evidence at the hearing. Even if it did, this does not justify a deprivation of the right to due process. In order to provide the parties due process and a meaningful opportunity to present evidence on these issues, the State Engineer should have included these factors in the Notice of Pre-Hearing Conference. *See Eureka Cty.*, 131 Nev. at 855, 359 P.3d at 1120; *Revert*, 95 Nev. at 787, 603 P.2d at 265 (criticizing the state engineer for engaging in post hoc rationalization). This

---

<sup>75</sup> See SE ROA 48.

<sup>76</sup> SE ROA 726-948.

1 due process violation is particularly harmful to water rights holders in Kane Springs, the sole basin  
2 that had not been previously designated for management under NRS 534.030, had not been included  
3 in the Order 1169 aquifer test, and had not been identified as a basin to be included in the LWRFS  
4 superbasin in Order 1303.

5 Accordingly, this Court concludes that revealing the criteria only after stakeholders had  
6 engaged in the extensive investigations, expert reporting, and the intense factual hearing requested  
7 by Order 1303 further violates the participants' due process rights.

8 As this Court has determined that the Nevada State Engineer exceeded his statutory authority  
9 and violated the participants' due process rights in issuing Order 1309, it declines to reach further  
10 analysis on whether his factual findings in Order 1309 were supported by substantial evidence.

11 **IV.**  
12 **CONCLUSION**

13 The Court FINDS that the Nevada State Engineer exceeded his statutory authority and had  
14 no authority based in statute to create the LWRFS superbasin out of multiple distinct, already  
15 established hydrographic basins. The Nevada State Engineer also lacked the statutory authority to  
16 conjunctively manage this LWRFS superbasin.

17 The Court ALSO FINDS that the Nevada State Engineer violated the Petitioners'  
18 Constitutional right to due process by failing to provide adequate notice and a meaningful  
19 opportunity to be heard.

20 As a result, Order 1309 is arbitrary, capricious, and therefore void.

21 Good cause appearing, based upon the above Findings of Fact and Conclusions of Law, the  
22 Court ORDERS, ADJUDGES AND DECREES as follows:

23 IT IS HEREBY ORDERED that the petition for review of the Nevada State Engineer's  
24 Order No. 1309 filed by Petitioners Lincoln County Water District and Vidler Water Company, Inc.  
25 is GRANTED.

26 IT IS FURTHER ORDERED that the petition for review of the Nevada State Engineer's  
27 Order No. 1309 filed by Petitioners Coyote Springs Investment, LLC is GRANTED.

14 **ADDENDUM AND CLARIFICATION TO COURT'S FINDINGS OF FACT,**  
15 **CONCLUSIONS OF LAW, AND ORDER GRANTING PETITIONS FOR JUDICIAL**  
16 **REVIEW FILED ON APRIL 19, 2022**

17 This matter came before this Court on consolidated petitions for judicial review of State  
18 Engineer's Order 1309 filed by Petitioners:

- 19 • Southern Nevada Water Authority and Las Vegas Valley Water District
- 20 • Coyote Spring Investment, LLC
- 21 • Apex Holding Co. and Dry Lake Water, LLC
- 22 • The Center for Biological Diversity
- 23 • Muddy Valley Irrigation Company
- 24 • Nevada Cogeneration Associates Nos. 1 and 2
- 25 • Georgia-Pacific Gypsum LLC and Republic Environmental Technologies, Inc.
- 26 • Lincoln County Water District and Vidler Water Company.

In the Order filed April 19, 2022, the Court determined that the Nevada State Engineer exceeded his statutory authority and violated the participants' due process rights in issuing Order 1309, and declined to reach further analysis on whether his factual findings in Order 1309 were supported by substantial evidence.

The Petitions filed by petitioners Southern Nevada Water Authority and Las Vegas Valley Water District, Muddy Valley Irrigation Company, and The Center for Biological Diversity supported the Nevada State Engineer's position that Order 1309 did not exceed the State Engineer's statutory authority nor violated participant's due process rights in issuing Order 1309. However, each of these three petitioners challenged the factual findings as not being supported by substantial evidence.

**IV.**  
**CONCLUSION**

To the extent that the petition for review of the Nevada State Engineer's Order No. 1309 filed by Southern Nevada Water Authority and Las Vegas Valley Water District seeks relief for violating their due process rights, IT IS HEREBY ORDERED that the petition is GRANTED IN PART. The remaining portion of the petition that support the position that the Nevada State Engineer did not exceed his statutory authority in issuing Order 1309 is DISMISSED.

To the extent that the remaining petitions support the position that Nevada State Engineer did not exceed his statutory authority and provided due process in issuing Order 1309;

IT IS FURTHER ORDERED that the petition for review of the Nevada State Engineer's Order No. 1309 filed by Petitioner Muddy Valley Irrigation Company is DISMISSED.

IT IS FURTHER ORDERED that the petition for review of the Nevada State Engineer's Order No. 1309 filed by Petitioner The Center for Biological Diversity is DISMISSED.

**IT IS SO ORDERED.**

Dated this 13th day of May, 2022
