EXTENDED OPHTHALMOSCOPY AND OCT REPORT

NAME: MESI, ERIC (115311) - 09/04/1963

DATE: FEBRUARY 04, 2019

Slit lamp examination demonstrates a white and quiet conjunctiva, clear cornea, deep and quiet anterior chamber, normal iris and trace nuclear sclerotic alterations.

Dilated fundus examination demonstrates posterior vitreous separation, a 0.3 cup-to-disc optic nerve, normal vasculature, limited subclinical retinal detachment in the right eye from the 9 o'clock to 12 o'clock location demarcated along the posterior border with laser retinopexy. Minor lattice alterations are present inferiorly in the left eye on 360° of scleral depression in each eye with an OCT that demonstrates a normal macular profile.

IMPRESSION:

1. TREATED SUBCLINICAL RETINAL DETACHMENT IN THE RIGHT EYE, POSTERIOR VITREOUS SEPARATION EACH EYE, LATTICE DEGENERATION LEFT EYE.

RECOMMENDATIONS:

Observation.
