**Diagnosis**

Incarcerated incisional hernia (ICD9 552.21, Working, Medical).

**Course:** Improving.

**Plan**

CT shows no signs of abscess or leak and looks improved from with less paracolic fluid than prior nothing amenable to drainage. Had long discussion with husband and brother regarding findings, pts condition, indications to return to o.r. and indications not to reoperate and what reoperation would entail. They both understand and their questions answered to their satisfaction. .
